Janus is manufactered by

VHF Computer GmbH
Daimlerstrasse 13
71101 Schoenaich
Germany

You can also get them via email at janus@vhf.stgt.sub.org.
(But I haven't tried yet.)

In the latest ST-Computer they announced an 68020 with 25 MHz as the onboard
processor.

The possibility of creating a boot disk easily doesn't give you the permission of giving this disk to anyone else.

CL>but MS-DOS ver 3.2 and older is* public domain

You're probably right, but DOS versions <3.2 have got some major disadvantages (unable to access hard disks, for example), so you should better buy a copy of MS-DOS 5 (or 6.x if you like bugs)...

The 14" was the SM147 (sitting right in front of me!). It was produced by another (seemingly backyard operation) company, and Atari slapped (quite hastily, it seems) their logo on the front. The manual and box don't say Atari anywhere on them.

I never heard of the SM125 . . .

> Sorry for my bad english, but what's a POM?????

Ahh, don't apologise. It's slang in this part of the world (Australia
and New Zealand) for someone originally from England. It has it's
roots in Australia being used as a prison colony as it originally
stood for "Prisoner of Mother England" I believe. It is now a
semi-derogatory name for any English immigrant. The phrase a "whining
Pom" is fairly common description, when such certain people complain a
lot about how things aren't as good as they should be or were back
home.

Early ST's is what Jens says... ie the STFM et al. I think its with < TOS 1.4
It was fixed in the STe (and Rainbow TOS), and all subsequent machines...

From: mdekker@fwi.uva.nl
Message-ID: <3qhd36$dq1@turing.fwi.uva.nl>
Source record: 164670

Hello,

I am working in Paris for a while, and yesterday I was playing
with Minitel, it has a section for Atari. Although this section
is not very up to date I believe, it has a section about games
for the jaguar. It says that Myst and Creature Shock are being
ported t the jag! great news I would say!

It also has a falcon section, its main falcon menu claims that
over 100 shops in france sell Falcons, but when you ask for the adresses
it just says: no info! well, it sounded too good to be true anyway.

Yes: LaTeX is ``only'' a set of macros for TeX. (Actually TeX itself is ``only'' a set of macros and an interpreter, just as emacs is ``only'' a library of elisp functions :>).

There are two ports of TeX to Atari/TOS, by C. Strunk and Lindner (sp?). I'm a happy user of the Strunk version in its MultiTeX incarnation (but the shell doesn't work under MiNT -- must look into that some time).

> 2. Are there any font editors for it ? We've got 18 native
> characters here in Poland... :(

TeX has a sister program Metafont for producing new fonts, but I don't think you need to do that: if it's just an ogonek here and there then a LaTeX ``style file'' is all you need. A lot of work has already been done on using [La]TeX for slavic languages, and it's all freely distributable.

Get the FAQ material for comp.text.tex, and track down a CTAN (Comprehensive TeX Archive Network) site near you -- I think it's called ctan.dante.de, but my TeX stuff is at home and the link from my office to the internet is down, so I can't check just now.

> Ok, so TrueImage doesn't do much else that GemView does, and from what
> someone else just told me I should steer away from TruePaint altogether.

I haven't used GemView in a long while. I got tired of waiting
30 minutes to load a .PI1 file (grin). True Image is reasonably quick.
If you haven't registered Gem View yet (and I believe this is what
were getting at, spending $$$$) then get TI. If you want to paint
with an air brush, get Apex. If there is a Falcon compatible 16 bit
color program available that is as easy to learn and use as Apex
let me know and I'll BUY it (if I don't already have it).
Yes, to be honest, stay away from TP. It does however come bundeled
with VideoMaster Falcon if you want it for free.

> I've got a copy of the Apex Media demo, and aside from the fact that (at
> least as far as I can tell) it has no hardcopy capabilities, otherwise I
> probably would've bought it by now :)

I think that the varity of function that Apex provides excuses it
from not being able to do "hardcopies" due to 4 meg Falcons. If
everyone had a 14 meg Falcon mabey things could have been different.
Cut loose and get Image Copy (I think 4.0 is available) and Apex.
Mabey you will help support a future upgrade.

Mike.

> Rich Mier

Actually I'm very sure that this *is* in fact a TOS Revision problem. After
TOS 1.04 it isn' a problem anymore.

But since this thread was concerning ST's (no 'E' here) I just thought
that it would be polite to mention the potential problems.

// Jens M Andreasen

PS The swapped bytes has to do with the different ordring of MSB/LSB in
Intel and Motorola architecture. 'Somebody' just happened to forget
all about it.

|>

Wow! TeX on an 8086 PC! I guess this isn't meant to be taken seriously. Just go ahead and create a 50 page document in LaTeX, compile it, take a look at the preview, get the pagebreaks right, recompile it, get the pagebreaks right again ...

There is no doubt that TeX requires a very powerful machine if you don't want to lose your nerves on it. I don't feel that my TT is a slow machine, but when it comes to compiling a TeX document, I always have the impression that it's 15 year old technology ...

Alan Parker (se2ap@dmu.ac.uk) wrote:
: I just got this demo and after managing to find enough room on my
: hard disk I ran it. OK, it's fairly impressive and the music is
: great, but then it locks up on the green tunnel with people doing
: handstands. I know it's not a memory problem as I boot with nothing
: else loaded. So it's a disk speed problem. My disk is quite fragmented
: but even so I don't think there is any excuse for the demo locking up.
: As a coder I know that it would not be difficult to make sure it never
: crashes even if it couldn't get the data quick enough. It would just have
: to go out of sync to the music. Later on it might be able to resync. I
: suppose it could be a corrupted download but it dearchived perfectly so
: I suspect the disk is the problem.

I had the same problem. The demo hates SCSI drives. Copy your demo to
the IDE and it works fine. The speed isn't an issue as my SCSI does 1.8
meg a second and my IDE only 680K. I almost deleted the demo thinking it
was lame, but a little critter in my head said "try the IDE" and loe and
behold it worked! If you do not have an IDE drive, then you're screwed.

Lot's of luck!

> Can anyone advise if GEMSpooler can be used to operate via the serial
> port at all?
YES, no problem.
> Ideally I'm looking for something which will take in
> an ascii file (via drag and drop)
Again, No problem
> and then set the serial port to
> 2400 baud pass the file down to the printer, and then return the port
> to 19200kb.
It gets abit tricky here, in theory it should be possible but as I
havenen't tried it. The way I would attempt it is to set up Gemspooler so
that it "prompts for Job Settings" ie it accepts data and saves it to disk
but before physically printing it will prompt you at the "Job Settings"
dialog, thus allowing you to alter no of copies etc and also give you the
opportunity to adjust the serial settings.
Obviously though these settings will have to be left until all printing
has fininished before they can be changed back to the higher setting.

Well, what picture, what resolution (of picture, not of monitor), few
or lots of reflections, anti-aliasing or not? My entry for the Feb 95
comp.graphics.raytracing took 6 hours on a Sun, which is about 50 times
faster than the Falcon.

3774. Falcon Upgrades Help

Newsgroup: comp.sys.atari.st
Date: 1995-05-31 00:00:00 UTC
From: pe@cam-orl.co.uk
Message-ID: <3qi9bl$og0@lyra.csx.cam.ac.uk>
Source record: 164685

I am looking at cheap ways to upgrade my Falcon

So if any of you could possibly answer the a few questions
for me I would be most grateful.

The 32MHz Power Up2 upgrade :
a) is it worth the money?
b) how easy is it to fit?
c) what does fitting involve?
d) would it hinder any future upgrades?
e) does it disable the DSP?

TT-Ram boards :
does a simple, cheap one exist for the Falcon?
if so
a) who sells it?
b) will it fit within the existing case?
c) how many SIMMS slots?

Either E-mail me at the address below or post here.

Thanks in advance.

Rich.

Just a minor clarification: CDAUDIO comes with ExtenDOS Pro, not with
basic ExtenDOS. As Kim notes, it works fine with all recent NEC drives.

It works from my scsi-drive... What hard disk driver do you use? I use hushi
6.0x. The document that comes with the demo says something about ram memory,
and that you shouldn't have too large disk cache. Maybe that is your problem...
On the other hand; if so, why does it work with ide?

3778. ANN: ExtenDOS Pro v2.1 is now available (long)

Newsgroup: comp.sys.atari.st
Date: 1995-05-31 00:00:00 UTC
From: rzb20@ccc.amdahl.com
Message-ID: <1995May31.181722.23570@ccc.amdahl.com>
Source record: 164689

```
Anodyne Software announces:

ExtenDOS Pro v2.1: CD-ROM for everyone
--------------------------------------

ExtenDOS Pro version 2.1 is the latest version of Anodyne Software's
CD-ROM drivers for Atari systems. Like previous versions, it provides
access to CD-ROMs and audio CDs on most popular CD-ROM drives, but v2.1
offers many features that make it easier to use than ever before,
including:

. easier installation and reconfiguration via the new GEM-based
installation program
. support for multiple CD-ROM drives using one copy of the drivers
. better audio player graphics, by using 3D gadgets where available,
and providing an alternate smaller window to reduce screen clutter.

With ExtenDOS Pro, you can play audio CDs as easily as you can access the
data on CD-ROMs. Put a CD-ROM in your drive, and access it like a large
removable hard disk, or pop in an audio CD and use the included program to
turn your CD-ROM drive into an audio player.

Audio support
-------------
ExtenDOS Pro includes the following audio functions:

. play/pause/stop/eject
. track forward or back
. index forward or back
. skip forward or back
. cd repeat/shuffle
. volume control

These are provided through an interface visually similar to a standard
audio CD player, with clearly-marked buttons and a complete time/track
display. A smaller version of the main window may be selected at any
time; this is particularly effective in reducing screen clutter when
running the audio player as a desk accessory.

ExtenDOS Pro conforms to the proposed CD-ROM software interface standard,
simplifying use of CD audio by third-party products. Further details are
available on request from Anodyne Software at the address below.

Data support
------------
ExtenDOS Pro provides support for industry-standard CD-ROM formats. You
can access any ISO9660 or High Sierra format CD-ROM as if it were a
```

removable hard disk, switch between supported disk formats without a reboot, and access files of any size. ExtenDOS Pro even provides a built-in configurable cache facility to speed up data access. And with the right drive, ExtenDOS Pro supports single-session or multisession photoCD as well.

Hardware requirements

ExtenDOS Pro requires a SCSI CD-ROM drive connected directly to a SCSI port, or connected to an ACSI port via an ICD AdSCSI+, Link, or Link2 (or equivalent) host adapter.

Please note that other host adapters (including the original Atari host adapter, the Supra, the BMS, and certain early ICD adapters) may not be capable of transmitting the commands necessary to support audio CD and photoCD. If you're not sure whether your adapter is compatible, please contact Anodyne Software at the address below.

ExtenDOS Pro runs on all TOS-based Atari systems, including the ST, STe, Mega, MegaSTe, TT030, and Falcon030. Supported functions depend on the type of drive:

Function Type of drive
--- ---
read standard CD-ROMs Any
read single-session photoCD Most current drives
read multisession photoCD Selected drives, including the
NEC 74-1/84-1 and the Toshiba 3401
audio control/play Any fully SCSI-2 compatible drive;
selected SCSI-1 drives, including
models from NEC and Sony

The following is a partial list of supported drives:
. Apple CD-300/CD-300+/PowerCD
. Chinon 525/535
. Compaq 561
. MediaVision Reno
. NEC 25/35/72/77/80/82/37/74/84/38/74-1/84-1
. NEC 210/3Xe/3Xi/3Xp/3Xp+/4Xe
. Pioneer 602X/604X
. Plextor 3024/3028/5024/5028/4plex
. Sony 6211/8022/541/561/55S
. Texel 3024/5024
. Toshiba 3201/3301/3401/3501/4101/5201

For the latest information on supported drives, please contact Anodyne Software via GEnie (R.BURROWS1), or via the Internet (r.burrows1@genie.geis.com), or write to the address below.

Software requirements

ExtenDOS Pro requires one of the following standard operating environments:

. TOS
. MultiTOS (with MiNT v1.08 or v1.12)
. Geneva (v003 tested)
. Mag!X (v2.01 tested)

Availability

ExtenDOS Pro v2.1 is available now at a suggested retail price of $39.95.
Order from your local Atari dealer, or directly from:

Anodyne Software
6 Cobbler Court
Ottawa
Ontario K1V 0B8
CANADA.

ExtenDOS Pro Upgrades

If you are an existing ExtenDOS Pro user, you may upgrade to version 2.1
AT NO CHARGE by downloading the upgrade file, EPRO_210.ZIP. This is being
distributed to several online services, including GEnie. Alternatively, you
may upgrade by sending your original diskette plus $8 (including shipping)
to Anodyne Software at the above address. Please see below for methods of
payment.

ExtenDOS Upgrades

Until 31st July 1995, existing owners of ExtenDOS may upgrade to ExtenDOS
Pro v2.1 by sending the original ExtenDOS diskette plus $15 (including
shipping) to Anodyne Software at the above address. After that date, the
upgrade charge will increase to $20. The upgrade includes a new manual.
Please see below for methods of payment.

Methods of payment

For North American orders, please make your payment by cheque or money
order, in US$ for shipping to the U.S.A., in Canadian$ for shipping within
Canada. Ontario residents please add 8% sales tax.

For shipments outside North America, please pay by money order in US$.
Please add an additional $2 for airmail shipping.

Roger Burrows, Anodyne Software, 6 Cobbler Court, Ottawa, Ontario K1V 0B8.

If GDPS_SC.PRg is the program I think it is, it works on a TT, *not* on a Falcon, and also only the SCSI version of the scanner, not the parallel version.

David, where did you get EP_GDPS3? I would be interested in trying that.

3789. Atari Shows In Scotland

Newsgroup: comp.sys.atari.st
Date: 1995-05-31 00:00:00 UTC
From: rmccall@mcs.dundee.ac.uk
Message-ID: <3qir17$8eo@dux.dundee.ac.uk>
Source record: 164700

I know the Scottish weather can at times deter people, but does anyone
know if there are any plans to have an Atari show North of the Border?

Rod

I have eleven (11) SC1224 video monitors and six (6) 1040ST
systems in various states of disrepair. If you want some or
all of it, and can carry it away, it's all yours.

Reply via e-mail or voice (number below).

3793. Re: Trueimage/Truepaint question

Newsgroup: comp.sys.atari.st
Date: 1995-06-01 00:00:00 UTC
From: lamarth@delphi.com
Message-ID: <BI6+0vw.lamarth@delphi.com>
Source record: 164504

michael grove <mgrove@owens.ridgecrest.ca.us> writes:

>I haven't used GemView in a long while. I got tired of waiting
>30 minutes to load a .PI1 file (grin). True Image is reasonably quick.

Yea, that's the one reason why I didn't register GemView- considering it was
running on a Falcon it took quite a while for it to bring up a image.

>If you haven't registered Gem View yet (and I believe this is what
>were getting at, spending $$$$) then get TI. If you want to paint
>with an air brush, get Apex. If there is a Falcon compatible 16 bit
>color program available that is as easy to learn and use as Apex
>let me know and I'll BUY it (if I don't already have it).
Well, I'm wanting to be able to edit graphics files (at a pixel level) so it
sounds like I'll wind up getting Apex. And from what I've seen of the demo,
I won't be sorry :) It's paying the money that's going to be a problem...

>I think that the varity of function that Apex provides excuses it
>from not being able to do "hardcopies" due to 4 meg Falcons. If
>everyone had a 14 meg Falcon mabey things could have been different.
>Cut loose and get Image Copy (I think 4.0 is available) and Apex.
I think I will do that- it's looking like I won't be able to have both a
graphics printer and a editor all in one :)

* P O R T F O L I O N E W S *
* *
* Internet newsletter for *
* Atari Portfolio users and fans *
* *
**************************************
No 1 April 7, 1995

*******************************************
* Portfolio in the Czech Republic

There is a PF club that provides user services instead of Atari Corp.
or dealers who are dead in this country.

Contact:

Portfolio
252 45 posta ZVOLE
tel: +42 2 99 61 894

INTERNET:
sedlakj@pedf.cuni.cz

************************************
* What is new for Portfolio?

HARDWARE:

- PortWalk - tape recorder interface
Enables to save and load files onto any tape recorder cassettes. It is
very handy, and unlike 8-bit era of "tape recording", this interface
is very reliable thanks to error detecting code.

- 128 KB RAM CARD
Atari cards are very expansive - the RAM card we developed uses one
Low-Low Power chip and CR 2025 lithium battery (plus some diodes).
The assumed life expectancy of the battery at least 2 years.

- 25 pin parallel interface
As there are big problems with Atari dealers in Europe, we decided
to produce 25 pin Centronics (Parallel) Interface. It is a bit
smaller than original interface and consumes twice less energy.

- FolioDrive - 3,5" floppy disk unit with included parallel
interface and battery pack
It was specially developed for Portfolio and enables to read and write
```

1.44 MB PC diskettes. No cables more needed. You can run files directly
from the diskette.

SOFTWARE:

* In February we have finished a graphic version of Portfolio
BIOS and DOS.
This means that Portfolio can display any character using direct
access to the LCD driver. Thus Portfolio can be used in countries
with extended alphabet (e.g. in Czech Republic). We used similar
routines to those used in PGC and PGX format. The resident
program runs even under ROM applications.

* There is a PC program that enables to work with Portfolio .TXT
and .ADR files in the same way as on PF.

OTHERS:

* Genuine leather case with a battery pocket
Protects Portfolio against dust and other "evils". One built-in
pocket for identity card or passport, another pocket
for 3 AA batteries. Full handwork.

****
* Things under development:

- Upgrade your PF to 512 KB RAM!!
We are going to upgrade Portfolios to 512 KB of system RAM

- 60*10 character display
Another aim of ours is to make Portfolio display 60*8 characters using
8*4 pixel fonts. This will mean that user will see more of the whole
screen if running PC files.

We hope to implement other graphic features:
* blinking
* inversion
Portfolio thus will become more PC alike.

There were already some attempts to make soft running in 60*8 mode,
but the new driver will be working constantly with all files.

****
* What we want:

- We are looking for Portfolio users in POLAND, HUNGARY, RUSSIA.
We want to offer them the new BIOS with their characters.

- We are looking for any Portfolio activities in the world.

- We plan to develop following peripherals, provided there are
enough Portfolio users to be interested in them and to buy them:

* new version of FolioDrive 3.5 inch FDD unit
with parallel interface, battery pack

+ internal 128 KB memory chip to serve as CASH and B: disk.

* FAX-MODEM module to send and receive fax, modem messages every where
in the world

* cordless, radio-wave based interface to connect PF to PC

* 512 KB or 768 KB SRAM module to serve as a data storage medium

* Interface for PCMCIA cards

****
* What we are looking for:

- any PF fans that want to join us

- any PF users who are able to develop new soft

- information about: Re:Port, Portfolio Connection Newsletter, etc.

- any kind of emotional, mental and other support

- any dealer that is willing to go on with
PF stuff and wants to sell our products

****
* How to get the described things

We hope that TOAD COMPUTERS will distribute
all our products in the USA and Canada.

Please support our efforts in promoting Portfolio
and send them your request for PF and products

Their e-mail: toad@charm.net

Otherwise send e-mail to us:

sedlakj@pedf.cuni.cz

****
Special greetings to:

Don Messerli - for his soft and graphics
BJ Gleason - for PBASIC and tons of other things
S. Spoelstra - for his BASIC, and others
Tomas Dusek - Go on developing the hardware!
Martin & Milan Hrdlicka - the authors of new graphic BIOS

3795. Re: Returning to ST Land

Newsgroup: comp.sys.atari.st
Date: 1995-06-01 00:00:00 UTC
From: STIRRE31@MAINE.MAINE.EDU
Message-ID: <95152.185007STIRRE31@MAINE.MAINE.EDU>
Source record: 164506

Steve,
I agree that Atari hardware is now overpriced.If you want a machine
to just mess around with, I'd suggest getting an STe. B&C also
has Mega STs and other systems for sale. Otherwise, wait here for
a good deal. Some people recently unloaded Mega STes for what
I thought were good prices.
Why is the hardware so expensive? It is out-of-production and
getting hard to find new units, I would guess. Supposedly
C-Lab will release cheap Falcons but only time will tell. Perhaps
the Eagle will be reasonably priced. Or, since you're a Mac owner
you may want to consider MagicMac, the software emulator.

> to have any problem with it.
> Are you sure this isn't just a TOS Revision problem?

Correct, it is a TOS revision problem, the built-in formatter in TOS 1.0
on up to (I think) 1.4 doesn't correctly set the media type bit or
somesuch in the boot sector, PC's need this but ST's don't
care. They also format the disk with a 7 sector FAT table instead of the
PC's 5 sectors (I hope those numbers are correct), I don't think this
really creates any problems with PC's though...

A lot of software tends to take forever when converting MIDI files, but
you'll have to live with it, the MIDI standard file format was designed*
to allow you to pass MIDI data to and from different sequencing software
packages and eventually to and from different platforms...

: A standard MicroSoft compatible serial mouse can be used in the regular
: ST mousport, but it needs a software driver.

: DMC Publishing, out of Toronto, sells such a driver, and it's my understanding
: that a similar driver is available for ftp from atari archive sites.

: A standard PC *bus mouse* can be used with no software drivers needed,
: but some slight modifications to the wiring of the connector are needed.

: There should be text files telling how to do this on the atari archive sites,
: and I know we have them in the Atari Forum on CompuServe.

: BobR

I don't think this will work... You can plug a serial mouse into the Atari
serial port. Therefore you will need a driver (I know of a driver
supplied with the AT Speed 286 emulator so that you could use your PC mouse
also with the Atari). I think the same is valid for bus mice except that
you need an RS232 adaptor.
The reason: Atari mice are "brain dumb", they just deliver a pulse code for
direction and movement and are suplied by the 5V line of the
joyport/mouseport. The IKBD has do do the work (calculate relative
movement etc.). PC serial mice need a real RS232. They deliver byte
sequences over the RS232. Since there is no free RAM area in the IKBD
you cannot write a driver to use PC mice on the ST mouseport! Such a
driver would have to reside in the IKBD RAM! Well it's possible but you need
another IKBD controller for that.

Okay, LaTeX is a bit slow. But that's mainly because it has to read
so many files. Believe me, using plain TeX on a simple machine isn't
too bad (unless, of course, you're spoiled with fat machines :-).
Especially compared to WYSIWYG programs...

>There is no doubt that TeX requires a very powerful machine if you don't
>want to lose your nerves on it. I don't feel that my TT is a slow machine,
>but when it comes to compiling a TeX document, I always have the impression
>that it's 15 year old technology ...

In fact, having a powerful machine would incourage you to `abuse' TeX,
and continuously recompile and preview. You shouldn't.

(But I have to admit that I do exactly that, too... :-)

Regards,

SM125 and SM147 seem to be third party equipment. The original Atari 12"
piece is the SM124 (with various different electronics and some minor
differences concerning the case - the only good ones are the old pieces with
linear regulation PSU). SM144 and SM146 are Atari monitor, the SM144 is
really *bad*.

It does exist. I had one connected to my old 520ST+. From what I can remember
the SM125 had a larger screen display (don't know in inches) than the SM124 and
it had a foot.

The ACN here in the Netherlands sold them recently for a few dutch guilders
more
than the sold the SM124 for (don't know exact difference and price sorry).

SEX Sign extend lower eight bits in D register

Operation: if bit 7 of B is set then A' <- $FF
else A' <- $00

Converts a two's complement number in B into a 16 bit two's complement
number in D

How about that for 6809 rememberance? (actually, I cheated - it's all
in ``The 6809 companion'')

The reason that you never saw Dragons in the States was because the Dragon
32 was the same computer (with a couple of minor differences such as the
keyboard scan table) as the Tandy CoCo - both were based on the Motorola
data sheet for the 6809.

Not again - check the Dragon 32 thread out on a.f.c (alt.folklore.computers)
We've got one here, btw. And my contribution to the strange 8-bits
collection:

BBC model B (2 off)
BBC Master, 6502 + Master 512 (80186) second processors
Acorn Electron
Acorn Atom
Sinclair ZX81
Sinclair Spectrum (48K version)
Commodore VIC20 (+16K)
Commodore 64
Oric 1 (beep,beep,bang :)
Jupiter Ace (didn't know there was anybody else with one
in the UK :)
Coleco Adam
Atari 800
Nascom 2
Commodore PET (4K version)
Commodore 8032 (plus double 5.25" dd)
Texas Instruments TI99/4a

and on the look out for more. Wanted (will pay p&p & small $$$):

ZX80
Newbury NewBrain

Dragon 64 (*not* 64K CoCo)
Acorn System 4 and/or 5
any other groovy British 8-bits

All the above are working and I can still hack about half of them beyond the "hello world" level (ie scrolltexts, chip music under interrupts, dodgy display timer tricks) - any donations will be going to a good home.

Hi *

for my GEM-programm i want to use offscreen bitmaps.
The only problem i have: How to do it???

I'm still using TurboC, so i need a "pure" C-Code (no lib).

Thanks for your help in advance.

There has recently been released a new version of MagiC - MagiC v.3.
Version 3 has a lot of new features and it may very well become THE
operating system for Atari computers.
It has all the features of MultiTOS v.1.08b (plus more), and it's a lot
faster and more stable.

Keep Cool and Flying...

: > Aidan.
: >
: We were speaking of the "Lostblue" demo recently deposited in the
: ftp.cnam.fr FTP sight. Yes, the laser demo works quite well. However, I
: found that this particular demo (Lostblue only) seems to not like SCSI
: drives. It may be a hardware conflict or even a conflict with my ICD driver.

Yes, that's the one I meant - `The Lost Blubb' - I'd forgotten the name.
It does work on my SCSI drive, but I'm using the AHDI driver (which I must
replace as the disk seems slower now than it was on the ST with ICD software).

: The SCSI drive is actually quite capable of 10.6 megabytes per second
: transfers, but the Falcon isn't that fast. So the fastest the Falcon can
: do is 1.8 meg per second with the video chip turned off. My HD is a 540
: megabyte Quantum Lightning with 10ms access time and a built in cache.
: It is quite capable of doing very high speed transfers. I have never had
: any disk errors. It just seems that the timing of the demo is
: incompatible with the SCSI DMA or the timing is incompatible with the ICD
: driver's. Using it off of my 20 meg IDE Conner drive works quite well.

Interesting.

: Rich

Aidan.

steveg@phantom.com (Steve G.) writes:
>Okay, I now have a couple of dollars to throw around and I thought I'd
>resurrect my Atari ST interest. However, seeing as how over five years
etc., etc.

Anybody who would spend big bucks for a machine built by a company that no longer supports it would have rocks in their head. If you want to stick with Atari STs, your best bet, IMHO, is pick up a cheap used one. There is no logical reason that I can think of to make a large investment in Atari computers. If you have some ST equipment and software and want to stick with Atari computers so that you can salvage your investment, I understand. I did the same thing when I "upgraded" from an old 520ST to a Mega STe, just because I couldn't bear to see a nice SC1224 monitor and a bunch of good ST software go to waste. But, take my advice, if you re-invest in new Atari computer stuff (if there is any left), you will ulitimately regret it. There's no Web browser available, etc., etc.
My advice, cut bait and switch platforms - Mac or PC. Otherwise, get a used ST. ---Mark van Wyk

Can anyone out there suggest a good vector graphic editor? I need to create and modify EPS graphics (with colour) from Illustrator etc. Is there anything that will run well on a TT?

All help/suggestions gratefully received...

It is a TOS revision problem. The old TOS 1.0 and 1.2 does this strange thing.
TOS 1.04 and better format discs in the more correct way.

Hello all,
Is there anyway of giving any news groups priority over others ?
I am using NOS on my Atari STe (if this helps!)
What I want to be able to do is get news from groups in a certain
order, so if I'm only logged on for a short while, the most important
news gets to me, even if the other stuff doesn't.
I haven't always got time to download all the news and would prefer to
get what I read the most first and not just Junk if I'm on a short time!

Thanx for any help.
Ade

P.S. Just an after thought, suppose (could of been another thread!!!)
uuecode (sorry if it's wrong, but you know what I mean!!) coder/decoder
where can I find one. (For ST of course!)

Yea, it'll crash on the Falcon if you try to select the configure item
(at least I THINK it's 'configure') on the menu.

>David, where did you get EP_GDPS3? I would be interested in trying that.

I believe I got it at ftp.uni-muenster.de - if you have a problem finding it
tho I'll UUE it to you.

That's your own Personal Opinion and you should so state.
Presently I am running 3 Seagate Drives. A old 40 Meg MFM, ST 253
on a 8Bit Atari; A 340 Meg SCSI on my 1040 STe and a 525 Meg on
my FALCON 030 4/85. NEVER had a problem with any of them.
As for the OEM statement, not really. They bought out the
CDC HD manufacturing and Imprimus (sc). That's were the 'Other'
came from. They had to forefill the contracts those companys had
at the time but that didn't stop them from putting their name on them
and comming up with a new model number.

Hi...

I usually use INTERLINK to connect to da net, but lately my VT100 emulator has been malfunctioning.. It doesn't seem to matter whether I recopy it from the floppy or use the floppy copy. It just refuses to load.

So, i want to use UNITERM, because i require VT100 mode..

I have the program, but can't find any files for the manual...

Can someone explain to me how to get ahold of this, where to connect to?

Or, perhaps you could email the manual file to me?

Or, perhaps you know of another good VT100 ATARI ST modem program?

Thanks!

Please email your replies, as I may not get back here in awhile..

3840. Atari 1040STf/SC1224 for sale

Newsgroup: comp.sys.atari.st
Date: 1995-06-01 00:00:00 UTC
From: eabu2072@aldebaran.oac.uci.edu
Message-ID: <3qjace$qtj@news.service.uci.edu>
Source record: 164599

I have the above for sale, plus loads of software...over 300 hundred disks as of last count....countless mags...everything works flawlessly..

Also included is a Color dot matrix printer, Star Color Rainbow, and an old Avatex 1200B modem....I know I have more stuff, but at the moment, I cant think of it....just know that I have used this stuff for eveerything from Midid to games-to DTP.....and have many tools for it...Calamus, Cubase, Spectrum 512, Cad 3-D, CyberPaint, Flash, Interlink, Flash, tons of games...just to list a few things...just ask if you do not see a program here...I probably have it....

anyway...since I have no idea what to ask for this system, please either email offers to eabu2072@ea.oac.uci.edu or post here to this newsgroup...I will try to scan it for responses...thanks...

also, if this is not the right newsgroup for this, I am sorry...I could not find a .for-sale. newsgroup for Atari's, and have seen other people post forsale stuff here...thanks for your understanding....

3841. Returning to ST Land

Newsgroup: comp.sys.atari.st
Date: 1995-06-01 00:00:00 UTC
From: steveg@phantom.com
Message-ID: <3qj4or$9p7@dockmaster.phantom.com>
Source record: 164600

Okay, I now have a couple of dollars to throw around and I thought I'd resurrect my Atari ST interest. However, seeing as how over five years have passed since I was into the ST scene, things have changed quite a bit - and now I'm lost.

I already have a 1040ST, but (a) it's very old and probably has TOS 1.0 installed, and (b) it doesn't work and, all things considered, would probably cost a lot more to repair and bring up to date than a new machine would be. I also have an SC1224 monitor in excellent condition that I'd probably keep (assuming a new ST would work with it), along with an SF315 (?) floppy drive and about 150 3.5" DS/DD floppies.

HOWEVER...I was recently perusing "ST Informer" (that laughable excuse for a professional magazine dated Mar/Apr 1995) and I couldn't believe my eyes. There is _NO WAY WHATSOEVER_ I could rationally and logically justify spending $800 on an anemic 030-based Falcon with *ONE* meg of RAM and NO HARD DRIVE! Or a TT030 *STARTING AT* $1300! Get real! I can buy a brand new 25Mhz 68LC040 Macintosh with 4-MB RAM and 80-MB hard drive - not to mention the significantly larger support base - for $600! Hell, I can buy a brand new 33Mhz 68030 *PORTABLE* Macintosh for $950! I can get a basically configured Pentium system for $1300!!!

No, I'm not Atari bashing here (contrary to what it looks like). I really want to get back into the Atari 16-bit scene, but there's just no way in hell I'm going to spend a LOT more money for a LOT less computing power. I mean, is it just me that sees this? Why the hell is all of this weak, underpowered, underconfigured Atari hardware so friggin' expensive?!?

I had figured - naievely enough, it seems - on spending ~$500 on a Falcon with, say, 2-4 megs of RAM and an 80-MB hard drive. That would be a fair price. $800 is just bull.

Any insight to this would be appreciated.

We were speaking of the "Lostblue" demo recently deposited in the
ftp.cnam.fr FTP sight. Yes, the laser demo works quite well. However, I
found that this particular demo (Lostblue only) seems to not like SCSI
drives. It may be a hardware conflict or even a conflict with my ICD driver.

The SCSI drive is actually quite capable of 10.6 megabytes per second
transfers, but the Falcon isn't that fast. So the fastest the Falcon can
do is 1.8 meg per second with the video chip turned off. My HD is a 540
megabyte Quantum Lightning with 10ms access time and a built in cache.
It is quite capable of doing very high speed transfers. I have never had
any disk errors. It just seems that the timing of the demo is

incompatible with the SCSI DMA or the timing is incompatible with the ICD driver's. Using it off of my 20 meg IDE Conner drive works quite well.

Rich

Only if you have *lots* of spare time; SpeedOfLight and FastGIF are both
much faster at rendering GIF images. Both are available at standard Atari
ftp sites.

GR> point here is that at least you *can* network together Doom on
GR> a PC. The fact that you can run industry standard software
GR> and games is reason enough for most people to buy a PC. The
GR> fact that a Falcon has a nice OS and some good software is
GR> enough to use that. In a perfect world we'd all have one of
GR> each.

If all one aspires to is the industry standard, I guess that an IBM PC would suffice. But don't forget that McDonald's is food industry standard. (IMHO, industry standard = lowest common denominator.)

Still, wouldn't you rather eat at a five star restaurant? One that serves such great food as Apex, Cal SL, DA Vector Pro, Cubase Audio, etc, etc.? :-) Unfortunately, most people DON'T make any effort to look for something better. They just accept what the advertisers throw at them-whether in their musical tastes, choice of computers, the car they drive, etc.

I'm not flaming you, Graeme, just using this message to extrapolate on related topics. Finally, I agree that in a perfect world, we'd all have one of each. (Now why didn't Compo bring out a fast 486 card for the Falcon like they talked about-that would have done the trick! :-))

... A feature is a bug with seniority.

Get Octopus, that's the programm who can make use of the Falcon and all
other Atari computers with or without multitasker. Next release let
you able to run multiline when Mag!C is installed.

Octopus does run in GEM and TOS environment (double userinterface) so
you can use it very nice on a Falcon

Where are you writing from? (what country?)

3846. Marcel word processing program

Newsgroup: comp.sys.atari.st
Date: 1995-06-02 00:00:00 UTC
From: Edward Piecewicz <edward1@delphi.com>
Message-ID: <5i9+Edz.edward1@delphi.com>
Source record: 164455

I recently downloaded Marcel 2.3.4, shareware version, and I like the program very much. It is the best word processing program I have seen for the Atari ST-series.

However, there is one small problem I am having, and the entity that publishes Marcel only provides technical support to registered users.

Since my decision on whether to stop using Marcel or becoming a registered user depends on the resolution of the problem, I am posting the problem here in the event that someone knows how to correct it.

The printer I have is an Epson ActionPrinter 3260. When the EPSON.PRD printer driver file is selected for printing, it will print the first page correctly. The second page to come out of the printer is blank. The third page comes out correctly, etc. In a multi-page document, every other page comes out blank. In a one-page document, the first page prints correctly, then a blank page comes out. The entire document -is- printed, but every other page coming out of the printer is blank.

I have determined that the problem lies within Marcel itself, as I have printed documents using ST Writer Elite, 1st Word, and Word Writer ST, and these three programs print the documents correctly without blank pages in between.

If this helps, the AP3260 is a single-sheet fed printer, not tractor-feed, and is dot matrix.

I have looked at the settings to see if there is an auto-form-feed setting that should not be set, but did not find one.

Any help would be appreciated. Thank you.

I have Falcon Speed installed and am impressed how well it does work.
Windows runs ok and the only problems that occure is when a program
trys to use more than 16 colors or hardware that isn't there. You can
only emmulate so much. I loaded MS Word 6.0 for fun and that program
did bring the computer to a grinding stop. You will also have to use
communication programs that access the BIOS and not the hardware.
Most older DOS programs work that way. You will have to set-up your
hard drives a little different than standard but its not much of
a problem.

Mike:)

3851. The CD-Rom question

It would be interesting to know just how many people who own Atari's have and use CD-Roms... And what they use them for....

Does anybody have this sort of info ??

Rough (educated) estimates would do...

Steve Found.

Anyone see KORONIS RIFT on the Atari 8-bit? Stunning! Rescue on Fractalus was scary too (especially that green monster popping up at your window, I almost had a heart attack the first time that happened!)

I don't think Lucasfilm did any of these classics for the ST, however, German developer Rainbow Arts did a souped-up Ballblazer called MASTERBLAZER or something like that. It had extra features like a 'slalom mode' where you race your little pod or whatever - it's quite old now, I think it was done around 1989. Don't know where you can get them now, I didn't have an ST then...

I think, Arabesque2 can export EPS. However, I don't know whether it can
import EPS as well. Compo Software sell it in Germany so I suppose they do
so in the UK. Possibly it has not been translated into English yet...

Another program I can think of is Kandinsky which can export PostScript files
(but not import them). Besides, it is much cheaper than Arabesque since it's
Shareware and an English version is available.

What they do is IMPORT stuff from German companies, so your best bet is contact the manufacturer. Is the Toplink actually made by Gasteiner? If it is you're pretty much screwed.

3855. [Q] Can Gemini run TOS prgs *not* in Console win?

Newsgroup: comp.sys.atari.st
Date: 1995-06-02 00:00:00 UTC
From: mbecroft@iconz.co.nz
Message-ID: <3qlm12$t8s@status.gen.nz>
Source record: 164525

I am using Gemini Desktop revision 1.999e.

I have used the "Create Alias" option of the File menu to make a Mupfel Script to run a TOS programme.

When I double click on the Newly Created Mupfel Script, the TOS programme runs in the Consol Window of Gemini, not with MiniWin like it should.

This is a nuisance, as I want to have all my utilities like Fsck and MfsDefrag in one place.

How can I get around this problem?

I m using a TT030 with 8 megabytes of RAM, 220megabyte Hard Drive, MultiTOS with MiNT 1.12 and AES 4.0.

Thank you very much for any help,
-Mario Becroft (mbecroft@iconz.co.nz)

>When I double click on the Newly Created Mupfel Script, the TOS programme
>runs in the Consol Window of Gemini, not with MiniWin like it should.

Do you want to run all TOS programs in Miniwin's window or just the specific
one you created the Mupfel script for?

If it's just the specific one edit the .mup file which probably looks like this:

```
---
#!mupfel
c:\path\mytosprg.ttp
---
```

Change the line with the path of the program you want to run to:

```
c:\path\miniwin.app c:\path\mytosprg.ttp
```

This will instruct Gemini to run Miniwin with the given command line, thus,
Miniwin will run mytosprg.ttp.

If you want all TOS and TTP programs you double click to run in Miniwin you
have to change the TOSDEFAULT environment variable in your gemini2\user\profile.
This variable contains default starting options for TOS programs. Change w:y
to w:n in it (w:y means 'run TOS program in the Console window'). I'm not
sure whether you have to set the TOSRUN variable additionally to specify the
program which runs TOS programs in a window (you could use TosWin instead).

You can find more about the environment variables in the Gemini-FAQ.
It's on ftp.cs.tu-berlin.de in /pub/atari/Utils/Shell/gmnifaqe.gz
I shall update the FAQ soon.

I wouldn't generalize this. The Bitstream Speedo format contains
extra information for setting/deleting certain points in a font
in order to refine the output (hinting).

|> And there is another big advantage while writing documents with LaTeX: You'll

I made the same experience. LaTeX is fine to get a feeling how
well readable documents should look like.

|> if you use a WYSIWYG system like Signum! or Papyrus you get
|> in danger of "playing" with the text and the pictures. And the result looks

|> Perhaps a professional would still begin to cry seeing my documents :-)

It's right that the danger to play around with features and
not to concentrate on the text is bigger when using a WYSIWYG
wordprocessor. However, it actually isn't the software that
has this "mistake", it rather is the "undisciplined user".

Perhaps everyone should get a permission to buy a wordprocessor
only if he/she has experience with LaTeX or has completed a special
course in document creation ... :)

Right, but which graphics software allows you to import
and export EPS-files on the ATARI? AFAIK only Arabesque II,
and this is no cheap peace of software.

The CSG-level-2 features in MultiTeX that can also be used
by TeXDraw are implementation specific, so they don't apply
to other platforms.

|> >Now don't tell me that this is an easy and flexible way to handle fonts.

Do you call it _flexible_ when you have to start METAFONT
first and have to wait for the machine several minutes just
to get a new point size??

And when you don't need this point size any more, the font
is still kept on the disk, although it isn't needed.

|> >I do not have any doubts that LaTeX is a very powerful system,

|> documents produce may be badly layed out & possibly confusing.

Sorry, I didn't express myself clearly: If you use LaTeX, this
means that you _still_ have to take care about the output.

|> >For example, LaTeX doesn't free you from the task to set pagebreaks
|> >right.
|>
|> I've found that LaTeX puts page breaks in all the right places, most of
|> the time. Where it dosn't put pagebreaks in the right place use \newpage.

And _this_ is my point: If you want to start a new page for
example because you've just finished a _semantical_ section
(which, of course, cannot be recognized by any typesetter or
WP), you have to do this with \pagebreak or \newpage, recompile
and then check the output again, whether the pagebreaks for the
following pages are still right. Depending on the length of
the document, this can be very annoying.

|> >It also doesn't tell you for a given tabbing environment

|> Mmmm.... Are you confusing \begin{tabbing} with \begin{tabular}? As for
|> narrow columns, you can set the column width with p{1.25in} in the
|> tabular environment.

Huh? I guess you didn't understand what I wanted to say.
Example:

Computer CPU MHz

ATARI ST 68000 8
Falcon 68030 16
ATARI TT 68030 32

Suppose you have done this with a \begin{tabbing} and
certain tab positions. If you want to add a new line
and write ...

Performa 450 \> 68030 \> 25

... you won't know whether "Performa 450" will still
fit within the first column or not (as, of course,
most of the fonts TeX uses are proportional ones).

The problem is the same when you create this with
a tabular environment.

|> >LaTeX doesn't do everything automatically. Neither does any other

```

I didn't say multicolumn mode, rather "multi box mode",
meaning things like this ...

```
--------- -----------------
| text in | | longer text box.|
| a box. | -----------------
---------

------------
| third box. |
------------
```

With the text floating from one box to the next.

```

Hi there ...

What is currently the best harddisk driver program available for the TT ?
I have a TT with two SCSI harddisks connected, and currently only have GEM
and BGM partitions on them (created with HDX version 5.0).
I now would like to do some testing with Linux68k and maybe also with
MiNT using Minix partitions.

a) What is the best way (program) to change a partition id ?

b) What driver currently supports all different partition id's (most flexible)
?

c) Does AHDI support different partition id's ?

Thanx in advance ...

Th-th-that's all folks ...

You wanna see what happened when I posted an English msg in the MAUS groups, dude?
Got not-very-nice replies for several weeks asking me to take my imperial American attitude back to the
English groups.. WHen I ask people not to use "foreign" languages here, I get pretty much the same
replies... Why is it that English is the only language expected to multiculturize?
I've no prob with other languages.. "Quite the opposite, actually"... I know the other dominent language in
my area pretty well.. But I don't like the "reverse descrimination"...

Not quite, the Dragon has a 6809e too. 0.8Mhz normally, 1.6Mhz in fast
mode. (Though fast mode didn't work on all models).

> The TRS80 was a Dragon clone!

:) Other way around... Dragon Data hired the design team who created the
TRS-80 CoCo...

I had a comparable problem and couldn't find any real solution, although I didn't try Kandinsky or the new Arabesque yet.

However, there was always one problem coming up:

EPS files have two parts, a bitmap header which is a low low resolution image of the files and which is used by most IBM and Mac programms to display the image on the screen and the "real thing", the rest of the file which has the real high resolution vector image.

When ever somebody offers you a programm which is thought to be able to convert EPS data, be careful: most programs can only use the bitmap header. But this header is often not even present (e.g. in XAct files) and is of very poor quality.

I'm considering to sell my TT030.

It has 10 MB ST RAM, no TT RAM, 540 MB HD and a Crazy Dot II VME graphic card. I could through in NVDI 3.01 ET 4000 to display true color over the card by using all Speedo fonts. A Caddy to add a syquest drive or a CD ROM could also be included.

What would be a reasonable price ?

Well, I have v5.5 Registered, so I don't know if this applies to 2.28,
but the switch for setting the buffer is -F. To quote the manual:

-F SIZE This parameter specifies the size of the file buffer. When
receiving a file, all incoming characters are stored in a
buffer. Whenever this buffer fills, it will be written to
the hard disk/floppy disk. As this affects the transfer
rate, this buffer's size can be specified. SIZE indicates
the size of the buffer in bytes, the suffixes 'K' and 'M'
indicate kilobyte and megabyte, e.g. '-F 16K' and '-F 2M'.
'-F -1' results in a buffer that uses all available RAM
except 100 KB.

SIZE: default 8192 bytes, minimum 1024 bytes

Like I said, I don't know if this works on the shareware version, but
give it a shot.

My point exactly. These drive bear the Seagate label and much more
reliable than Seagate drives of old. They are more reliable because they
are made by companies that Seagate have aquired/done deals with.

They are still Seagate drives though. Therefore not all Seagate drives are
rubbish.

3884. Falcon for sale

Newsgroup: comp.sys.atari.st
Date: 1995-06-03 00:00:00 UTC
From: ralunsfo@uncc.edu
Message-ID: <3qovti$dls@news.uncc.edu>
Source record: 164404

I'll be switching to a Powermac for work reasons soon, and so will possibly sell my Falcon to cover some initial costs.

Everything is in near perfect condition, unless otherwise noted.

The system: Falcon TOS 4.04/85 Meg IDE/4 megs RAM - Flawless condition

Other hardware:
KFC SVGA Multiscan (would have to look up the specs)
SC1224 Atari color monitor

Possible Software (not sure cause I may get MagicMac):
Lattice C 5.6
Devpac 3.1
DevpacDSP
GFA Basic 3.5

Datalite 2 (disk compression-like Stacker)
Neodesk4
Geneva (this and the above make excellent GEM and TOS multitasking environment and will soon be MTOS compatible)
Warp 9 v3.81

And of course Atariworks, MTOS, demo Falcon D2D, System Audio Manager, etc

All the software has the original documentation.

All offers should be emailed to ralunsfo@uncc.edu

Thanks,
Russ

> Could you post these instructions here, please? There are many of us here
> who have no access to Compuserve.

No problem.. it's fairly short. I haven't actually tried this myself, but
at least a couple of our Atari Forum members have done it successfully...

Remember that this is for a BUSS mouse, even though the author just refers
to it as a "MicroSoft Mouse". The PC serial mouse connector is the same
physical type as the Atari mouse uses, a miniature male DB-9.

BobR

Subject: How to hook-up a MicroSoft mouse to an Atari ST

Here's a repost of my article of wayyyy back (Feb 1989) on how to hook an
Microsoft mouse to an Atari ST. No software changes are required. All it
takes is creating a special cable between the mouse and the Atari.

I've been using a Microsoft mouse now for around 2 years on my 1040, with nary
a glitch. It's so much better than the Atari mouse, I'd never go back. (IMHO)

Well, here is how to connect a Microsoft Mouse to an Atari ST. (520/1040)
The Atari has a 9-pin D-type connector. The Microsoft Mouse has a rather
strange connector on the end. To prevent having to cut the mouse cable up,
I made this adaptor. If you still can't follow it, please let me know and
I'll try to redescribe it. This does work for me. I've been using it for
6 or so months now [Note, it's been 2 years now!] with no problems at all.
It does take some soldering skills, so if you're not so hot at soldering,
find a friend to help.

As far as I know, this does not effect your Atari's warranty. However, I
have not asked Atari.

```
Atari ST Microsoft Mouse ST expected signal
----- -- --------- ----- -- -------- ------
1 5 XB
2 3 XA
3 8 YA
4 9 YB
5 N/C N/C
6 2 Left button
7 N/C +5VDC (N/C)
8* 6 and also tie to pin 1 Ground
9 7 Right button
```

* = I am not sure why I have pins 6 & 1 tied together, but it does work.

The Microsoft mouse connector looks like this. This is the solder side,
with the leads pointing up.

```
---------------
| 1 |
| 2 3 4 5 |
| 6 7 8 9 10 |
| |
---------------
```

If you can not use the connector, the pins are numbered as follows. This
is the connector side from the Microsoft Mouse plug:

```
/------------\ This is a view at the front of the connector.
/ Blank "KEY" \ It is where the plug from the mouse would be.
/----------------\ The pin labeled 'n' is not connected.
| n 4 X 8 | The place labeled 'X' is filled, and does not
| 9 7 1 2 | have a pin.
| 5 6 |
\ /
\------------/
```

Have fun!

> But I think you mean the serial port. If you want to hook up a serial
> mouse to the mouse port you would need to do some major surgery.

I checked with Nathan Potechin of DMC publishing, and it turns out that the serial driver is indeed from Cybercube, the producers of the Cyrel Sunrise video card. Unfortunately DMC only distributes the card, not the other software products from Cybercube, so he couldn't give me any info about how the PC serial mouse connects to the ST when using this driver.

As for doing surgery, it depends. A serial PC mouse with a DB-9 connector should plug directly into the mouse port of the ST.. they use the same connector type (and that should include just about every serial PC mouse you're likely to encounter).

If it turns out the serial PC mouse needs to be connected to the ST's serial port instead of the mouse port, you would indeed need to convert the plug somehow.. but 9pin to 25pin adapters are easily available for a couple of dollars, so you shouldn't need to do surgery on the plugs.

The PC *buss* mouse *does* have a proprietary connector that would need to be adapted, or cut off and resoldered to a DB-9 that would plug into the ST's mouseport. It might actually be possible to use the cable from a dead Atari mouse to make such an adapter, or even possibly to solder the Atari cable to the mouse in place of the cable supplied with it.

I'll see if I can contact Cybercube and get more info from them about how the serial mouse connects to the ST...

(Meanwhile, I bought a "Best Mouse" for my ST from Best Electronics many years ago which works great, hardly ever needs to be cleaned, and "best" of all, is a direct replacement for the Atari mouse without adapters or drivers or anything... highly recommended..!)

Aha..! I guess that solves the mystery of where a serial PC mouse would connect to the ST...

I was wrong to assume it plugs into the mouseport then. How do you handle using the mouse for things like terminal programs though, where your serial port (at least on an ST with only one serial port) would be connected to a modem..?

> Sorry for my bad english, School is a long time ago ;-)

No problem there at all..! I wish everyone I knew here in the US spoke English that well..

Oops... not that it probably matters a lot, but the connector on both the Atari mouse and a serial PC mouse is a *female* DB-9. Must be I've got Friday night brain fade...

:)
BobR

(Oh, and I just realized there might actually be some "surgery" required to plug a standard DB-9 into the Atari mouse port since the standard plug has "ears" that stick out with screws to secure the plug into the connector. These protrusions would probably have to be cut off with a razor saw or something to allow the plug to fit into the Atari mouse port recess.)

> Are you sure this isn't just a TOS Revision problem?

That's exactly what it is. TOS versions previous to 1.4 didn't create
MS-DOS compatible floppy disks correctly.

It's usually a lot easier to just recommend formatting on the PC if you
don't know what version the person asking the question has... that way
they're sure to be able to use the disks.

So you're on the big-o-net now !

Remember me from NeST ???

I haven't been on NeST in almost 2 months now, because my Falcon
is standing here on the University in my group-room, hooked onto
AUC-net & InterNet via an RS-232 plug in the wall.

Have you tested the BarraCuda040 yet ?

I must admit that i haven't tested it yet, since the Falcon-version hasn't arrived yet. I've got a patch to make it work on the Falcon, without DSP support, but i haven't tried that either, since I'm very busy at the moment.

As far as i have heard, MagiC 3 should have network facilities and optional minix like filesystems (not sure about the minix-thing though).

There's a german sysop who has two BBS-lines running on the same TT-machine under MagiC 3, ask Kim Andersen - he's the one who told me.

But when the summerholidays come - ooooooohhh man things must be happening.

3900. New C-lab Falcons, anyone have details?

Newsgroup: comp.sys.atari.st
Date: 1995-06-03 00:00:00 UTC
From: ma2ljg@bath.ac.uk
Message-ID: <D9Lo9E.3E9@bath.ac.uk>
Source record: 164465

Does anyone have any concrete info on the new Falcons
which C-lab are hoping to show at the Spotlight show?

In interviews in Atari World C-lab have mentioned:

twin DSP based Falcons
models with enhanced graphics boards
enhanced TOS
rack mounted casings.

Also mentioned in the first press releases from C-lab are:

68040 based models,
ultra cheap 299 UKP models.

Does anyone have anymore details? What are we likely to see
at the show?

From: bign@fragile.termfrost.org
Message-ID: <3qpsp4$lv1@echoes.Wittenberg.EDU>
Source record: 164466

In an effort to end the ceaseless hard drive problems I've had for the last year, I replaced an old (and HUGE) Seagate ST-277N 28msec with a sleek Quantum Maverick 540S 12msec. Problem is when I run Ratehd.prg from the ICD Pro Utilities the Maverick has an average access time of 18msec! The Seagate always reported 28msec. Are drive manufacturers intentionally misleading buyers?

An ST version of Flashback should be amusing, 320*200 graphics on that game would be awful. Still, I wouldn't mind a look at it, as last I heard it hadn't been converted to the ST at all. Being coded by French coders though, it stands to reason if it was converted, it'd be a french version, meaning they probably sold numbers in the 3-digit area.... (And after that they'll complain that "it didn't sell, so we won't support the Atari any more", despite the fact that half an hour translating the game, and about the same for the manual would have made it available for most of the world and it would've sold like hot-cakes, but oh well... :)

3903. MiNT and X troubles

Newsgroup: comp.sys.atari.st
Date: 1995-06-03 00:00:00 UTC
From: azog@gti.gti.net
Message-ID: <3qq77s$jf5@gti.gti.net>
Source record: 164468

I am having some problems getting X running under MiNT, and it seems
that there are a few people who have successfully done this, so
I was hoping for a little guidance.

First, the short README file in X11R5.ZOO is slightly incorrect,
but after modifying the MINF.CNF for proper pathnames, I can start
the server. That's it, tho. Depending upon several enviornment
variables, namely $PATH and $HOME, I get different results.

First... I have all the executables (/usr...) on a TOS partition.
None of the executables break any TOS filename conventions, and
I had some bigger problems with them o a Minix filesystem. When
they were on a MinixFS, the server could not find the fonts directory.
shrug, now with it on a TOS partition, it works fine. $HOME and
$TMP are on the MinixFS, since there are config files in $HOME
that both the server and twm seem to need.

In any event, I use INIT=/bin/sh as the last line in my MINF.CNF
file, in case something goes wrong. After that, I just type xinit
and the server starts fine. Apperently something goes wrong in that
it cannot find $HOME/.xinitrc, or just bitches about $HOME/.xinitrc
not being in the path (which indeed it is). So I unset $HOME and
try xinit again, and this time the server comes up fine, but lacking
an .xinitrc it tries to start an xterm. xterm starts, reports:

xterm: cannot exec U:/!

and dies...

Just for yuks, I tried:

xinit twm

which starts twm, but since there is no .twmrc found, all it is is
a server, which is no good...

If anyone can give me direction, I would really appreciate it. Thanx

There is a program called LPS.TTP in the sounds directory at the umich
atari archives. LPS (long play samples) is a command line program that
wil play .au, .wav, .snd, RAW, and many other formats. It will work on
any ST or STE, not just the STEs like most programs. LPS plays samples
directly from disk (HD or RAMDISK, not floppy) so it can play samples of
indefinite length, free from memory limitations. The program is only
about 20K, has a good manual file in the archive, and can be installed on
thhee desktop as an application so you can play a sound from the desktop
just by clicking on it. It offers many options including speed and
volume overrides, etc. Good luck!

Source record: 164475

Hi, everyone,

I've been trying for the past month to install everything from MiNT+Net to X11, using the distribution kits and not, and have had _no_ success.

I can't even get my minixFS partition working right. It seems that all my decompression programs chop the file names down to 8.3 whether it's decompressing to the minix partition or not.

So I'm just wondering...what is step "numero uno"? I have MiNT 1.12, and have a basic understanding of the mint.cnf file. What do I get next? Not MiNT+Net, I hope, because net-070 is just the sources. So I guess I need gcc? Pleeeeease help :(The distribution kit installation programs don't work on my Falcon, for some reason. It seems there's no decent documentation even when I _do_ get the right files :(

Thanks to any kind soul that feels like helping me :)

Out of the ether, the following was mentioned by Doug...:

DL> The Dragon used the trusty 6809 (6809e in the TRS80-II) at a rather
DL> low Mhz rating. Can't remember what, but it was very sad.
Something like 1.2Mhz if I recall and the Dragon used a 6809e (at least thats
what mine has printed ontop of the CPU).

DL> The TRS80 was a Dragon clone!
Hmmm, the TRS80 used a Z80 CPU!!!!
I think you mean the Tandy CoCo which was compatible and the CoCo came out
before the Dragon, both being designed by the same group of people.

I don't think they make it, I'm pretty sure it's manufactured in
Germany. Anyone know exactly *who* makes it ??????

3920. Alarm clocks?

Newsgroup: comp.sys.atari.st
Date: 1995-06-03 00:00:00 UTC
From: CALLUM.LERWICK@flight.org
Message-ID: <321_9506040105@flight.org>
Source record: 164485

Hello, I'm looking for a good alarm clock program, one that will work with just about any program, (I use a lot of non-standard non-GEM TOS programs) multiple alarm times would be useful, doesn't take a lot of memory, one that is persistant, (not one of those stupid ones I've seen for other computers that beep once and stop), any ideas?

My standard answer: ANSITerm! A good 16-color ANSI terminal emulator, ANSI
is essentially the same as VT100, check it out! Teddy term will also do
VT100, but it needs a TT/Falcon to do 16 colors, try FreeZe Dried
Term also, it does VT100.

Yes, a *SERIAL* mouse has to be connected to to serial port, but a *BUS*
mouse can be connected to the regular mouse port.

I don't have the complete package, I just have QD Play that came with a
crappy multimedia program called Trace, basically you use sparc2st on the
sample and use QD Play to play the resulting file. I'd like to track down
a complete copy of this package... In fact I'm going to go hunting for it
on atari.archive.umich.edu right now...

> memory equivalent to a 1040 STE?

Nope, the "e" in STe stands for Enhanced, a 1040STe would have greatly
improved sound and somewhat better graphics that your 520ST, it also uses
SIMMs for easy upgrading of memory, has an improved version of GEM,
Blitter chip standard, improved keyboard (no more of that "mushy"
feeling), etc...

: Thanks for your help in advance.

NVDI has offscreen bitmap support from v.25 on. The offscreen bitmap part of NVDI is also available as a separate program, called "Enhancer". You can find this on most FTP sites as ENHANCER.LZH. Source code examples in C are included, IIRC. Hope this helps...

>it? And then... why do I need to use a special program to change the step rate?
Someone asked for something to do just that. Maybe like me he has
TOS 2.06 which seems to take it for granted that everyone has a HD floppy
installed and sets the step rate of the floopy drives to 6 instead of the
normal 3. Makes the drives real noisy. At least mine are!

>project (only german now, sorry!).

>Torsten.Lang@physik.uni-giessen.de

Hello Thorsten,

do you think that it might be possible to translate this to English if enough people are interested. I have a TT030 and would really like to upgrade the graphics abilities but there is very little in the way of graphics cards available in Australia and those available overseas are very expensive. I take it that this adapter allows you to use a standard PC ET4000 graphics card with the Atari.

Any or all info would be appreciated.
Regards from OZ
Mark

3933. Aan alle Nederlandse Atari Gebruikers...

Newsgroup: comp.sys.atari.st
Date: 1995-06-03 00:00:00 UTC
From: mss@xs4all.nl
Message-ID: <3qo98e$233@news.xs4all.nl>
Source record: 164498

Hallo! Aan alle Nederlandse Atari Gebruikers...

Op 4 & 5 Juni (Pinksterweekend) houdt de firma Paradox Computers, Atari-specialist van het eerste uur, in samenwerking met Apple, OPEN HUIS. Op deze dagen laten wij zien hoe u uw Atari-software op een vertrouwde manier kunt gebruiken op de Apple Macintosh d.m.v. de softwarematige emulator "MAGIC MAC". Alle goed geschreven software (In vensters of met dialogen), bv. Calamus of Papyrus, kunt u nu tot 8 keer vlugger (!!!!) zien werken op een standaard Performa 475, op 25 Mhz. U heeft al zo'n Performa + Sony Trinitron monitor + keyboard + software (waaronder "Alles voor Internet") voor maar f 2585. De MagiCMaC wordt geleverd voor f 349. Ook kan met het grootste gemak uw Atari harddisk aan de MagiCMaC worden aangesloten. MagiCMaC werkt geheel multitasking! U kunt met EEN toetsdruk terug naar de Apple-omgeving, en met EEN toetsdruk weer terug naar uw Atari Desktop. Het besturingstysteem is in 2/16/256 kleuren en geheel onder het operating-systeem MAGIC geschreven. Als desktop wordt EASE 3.5 gebruikt. Paradox Computers levert een NEDERLANDS-talige handleiding bij MagiCMaC!!!

En... voor snelle beslissers leveren wij deze maand een GRATIS CVG naar EPS converter, om uw Calamus bestanden naar Apple-formaat om te zetten. Ook worden er een aantal handige utilities bijgeleverd om wat zo een grote oversteek lijkt, zo klein mogelijk te maken!

Kom allemaal "Apple"-taart eten bij Paradox Computers!!!

TH> manufacturers intentionally misleading buyers?

No. For a start there are many possible definitions of seek rate. The
manufacturers will choose the one which gives the best result for them.

In this case it is more likely that the measured seek rate is being limited
by your driver s/w. You have to consider the TOTAL h/w-s/w package when
talking of performance.

The June issue of Atari World has a cover story on the Eagle, by
GE-Soft. A run down of the specs:
******
-Medium Tower case
-68030 @32 Mhz (free upgrade to a 32/64Mhz 68040 when available).
-32 bit bus
-6882 FPU
-320 Mb SCSII Hard Drive.(Up to 4 drives can be fitted internally.)
-Super Nova Mach 64 graphics card with 2 megs of VRAM
(capable of 1280 x 1024 256 colours, 800x600 24 bit colour.)
-Ports:ACSI,SCSII,2 modem ports,2 serial ports,Lan,parallel,MIDI,
VME,Rom cartridge, TT keyboard port, PC keyboard port, ST mouse
-Memory: up to 14 megs ST ram, 256 megs TT fast ram.
-Bus System: 8 Eagle expansion buses.
-Tos 3.06
-One Year Warranty

As well, the 040 upgrade should double the speed of the 030. Running
video in 256 colour mode is just as fast as running in 2 colour
mode(mono). For the future, an 060 board is planned. A Falcon sound
system and DSP board are also being worked on.

Out of the ether, the following was mentioned by Gaven...:

GM> A 'Pom', as in 'pommie' is usually used to refer to someone from
GM> England, normally in a derisive or down-putting way as in "Whinging
GM> Pom" (probably originated due to an English tourist/immigrant who
GM> complained about everything) or "Pommie B'stard".
I thought it was Pom as in "pompous" because thats the way we all acted ;-)

It's old but works just fine. And it's not the newer squished version either. This is the real Lynx; the first one. I'm just selling it because I don't play it anymore. It comes with two games; Chess and Qix.

E-mail or call sar@cts.com 619-596-2013

Besides, the OLD Lynxes stink. That $.02 part that the adaptor plugs into on the Lynx broke on mine, and I understand on a lot of other peoples' too. When I called Atari, they said they wanted $50.00 to fix it! I did a little snooping, and found that they don't even do that. They just send you a new Lynx, maybe not even the kind you had (IOW they'd send you a Lynx II).

I _love_ my Lynx (especially Zarlor Mercenary & Ninja Gaiden), but until they fix my Lynx for a fair price, I won't buy one. I wish someone would make a gadget so I could play my Lynx games on my Falcon (or even STe, I guess!). That would be great.

Just my $.02 worth :)

It's taken from the letters POHM which is short for "Prisoner Of Her Majesty" which was on all the prison clothing they had to wear.

No, IMG files are NOT Atari specific. They originated on the IBM platform under Digital Research Incorporated's GEM.

Graphics converters such as "Graphics Workshop", DTP programs such as Xerox Ventura (now part of the Corel Draw package) and some other PC software can deal with said files.

Unfortunately, now the world has gone to Microsoft Widows, the computer industry as a whole seems to have forgotten this.

(OK, you can get back to your flame-fest : typographically correct vs ease of creation/modification).

As I understand it the current priceing structure is only
valid until there are no Atari Falcons left, at this point
C-lab can do what they like with reference to price and
specs.

I've had an email from C-lab stating that the next model
will be under 1000 UKPs.... Hopefully we'll see what the
specs are in a couple of weeks..

>This was the difference if you brought a Atari Falcon and upgraded
>it to the C-Labs standard....

:GR> a PC. The fact that you can run industry standard software
:GR> and games is reason enough for most people to buy a PC. The
:GR> fact that a Falcon has a nice OS and some good software is
:GR> enough to use that. In a perfect world we'd all have one of
:GR> each.
:
:If all one aspires to is the industry standard, I guess that an IBM
:PC would suffice. But don't forget that McDonald's is food industry
:standard. (IMHO, industry standard = lowest common denominator.)

and people LOVE macdonalds food. bad example.

:
:Still, wouldn't you rather eat at a five star restaurant? One that

no. well it is nice to do once or twice. But after a day of shopping
I love to spoil myself with a nice fat cheeseburger. I am not the
only one.

:serves such great food as Apex, Cal SL, DA Vector Pro, Cubase Audio,
:etc, etc.? :-) Unfortunately, most people DON'T make any effort to
:look for something better. They just accept what the advertisers

usually because 'something' better is rediculously more expensive?

:throw at them-whether in their musical tastes, choice of computers,
:the car they drive, etc.

They only accept things that they can afford and things that are
actually worth the money they spend on it. Yesterday I saw a
nice diner advertized in ACN: a falcon with 4Mb, 30Mb Harddisk, only
for NLG2300!! Are you surprised people go the macdonalds to buy
a nice industry standard meal (a fat 486DX2/66, 8Mb ram etc) for only
NLG1700?

|> > extra memory chips I would be grateful. Incidently, is a 520 ST with 1M

If you have a ST(f/m) your best choice is propably to get a Marpet Xtra-RAM card.
This allows you to use standard 256K or 1Meg SIMMs on your ST. If you have a STE
you can use SIMMs directly.

|> > memory equivalent to a 1040 STE?
^^^^^^^^^^^^^^^^^

Yes, a 520 upgraded to 1Meg is identical to a 1040.

|>
|> Nope, the "e" in STe stands for Enhanced, a 1040STe would have greatly
|> improved sound and somewhat better graphics that your 520ST, it also uses
|> SIMMs for easy upgrading of memory, has an improved version of GEM,
|> Blitter chip standard, improved keyboard (no more of that "mushy"
^^^^^^^^^^^^^^^^^

My STE has *exactly* the same, crappy keyboard as my 520STFM, 1040STF and Falcon.

3962. FS- H/W,S/W CHEAP- SF Bay Area

Newsgroup: comp.sys.atari.st
Date: 1995-06-04 00:00:00 UTC
From: markvanwyk@aol.com
Message-ID: <3qt6b4$4ud@newsbf02.news.aol.com>
Source record: 164430

For sale, preferably to someone in the South S.F Bay Area (Sunnyvale, California)- NO REASONABLE OFFER REFUSED - CHEAP:

Hardware:
SC1224 color monitor - perfect condition.
A/B monitor switch

Software/games:
Microprose "F-15 Strike Eagle"
Ocean "Epic"
Timeworks "St Writer"
Infocom "Enchanter"
Psion "Chess"
All in the box with disks and docs.

Also, if someone wants to make an offer on all of the above, plus the following, I'll consider it:

Mega Ste w 4MB RAM, 50 MB HD
Spectre GCR w/Mac System 6.8
SM124 B/W monitor
MIDI cables and Midi Software, including "Tiger Cub"
Olympia Daisy wheel printer
tons of odds and ends software, commercial and P/D,

Make me an offer - any offer. I definitely prefer someone in the South S.F. Bay Area, California, cash and carry. Otherwise, it's buyer pay shipping, C.O.D.

] >Term also, it does VT100.

FDT Does _not_ do VT-100, it does VT52 and ANSI. NOT VT100 - try using
IRC with FDT, it ain't pretty! The best/quickest VT100 emulation for a
standard Medium-res ST, is either Flash (good) or Uniterm (better).
ANSI-term is fine, but looks a bit odd with some of the characters under
some circumstance.

3967. Re: MiNT and X troubles

Newsgroup: comp.sys.atari.st
Date: 1995-06-04 00:00:00 UTC
From: azog@gti.gti.net
Message-ID: <3qteg5$jia@gti.gti.net>
Source record: 164435

A few days ago, I babbled:
: I am having some problems getting X running under MiNT, and it seems
: that there are a few people who have successfully done this, so
: I was hoping for a little guidance.

Ok, I got further along, after a few hours of poking around and trying things. I am still not happy, as things seem to be slightly buggy, but hey! It's a start!

My first problem was that I didn't have a SHELL environment variable defined. Once I defined SHELL=/bin/bash, things worked a little better: the X server started, couldn't find any rc files so just blasted an xterm. That still left me with the fact that there was no window manager, and no rc's.

I had a line HOME=d:/home, where D: is a MinixFS drive, but something odd happens. If my CWD is _not_ D:, I get error messages regarding $HOME/.xinitrc. If my CWD _IS_ on any directory in D:, then things partially work: the X server starts and starts twm. So now I have three variables that needed to be defined:

SHELL=c:/bin/bash
HOME=d:/home
PATH=c:/usr/local/bin,c:/bin,

Ok, as above, twm starts. I press the launch mouse button, and choose to start an xterm; the hard drive accesses and my cursor turns into the wait icon, but that's the end of it. It never starts an xterm. Nor will it start any of the other programs on the menu.

Now, does twm need to run as it's own process (twm &), or can it just be invoked via .xinitrc as twm? Or do I need to exec twm (or exec twm &)? I tried out one or the other, but forget what "real" X needs...

```
-----BEGIN PGP SIGNED MESSAGE-----

this is more of an F.Y.I. than a request for a fix. Back in late
February of this year I sold my Atari ST pieces to three people. Two
of the people paid promptly and told me they were happy with the items
purchased and I think that others could trust them to complete their
end of any net purchase. The good folks are John Stanmeyer and
Douglas Zander.

The third person (Scott Call) told me that the equipment arrived, it
worked and asked where to send the check (he had the return address on
the box and in a couple pieces of email). We exchanged a couple more
pieces of email mostly me verifying everything went ok and giving him
my address repeatedly and him saying everything's fine, where do I
mail the check. Eventually he stopped replying to my email and on
April 27th, I sent a paper letter (return receipt requested) asking
for payment. No response.

I didn't lose much on the deal but I wanted other folks in the used
Atari market to be aware of those that pay and those that don't.

F.Y.I.

3970. PAPYRUS PROBLEM

Newsgroup: comp.sys.atari.st
Date: 1995-06-04 00:00:00 UTC
From: ee11cd@surrey.ac.uk
Message-ID: <3qtd52$fk0@info-server.surrey.ac.uk>
Source record: 164438

Hi,

I have a serious problem with Papyrus.

The problem is that when fonts are displayed on screen or printed out, they are too large. i.e. 12pt Dutch Roman comes out about 14pt. And the screen display does not always reflect the printed version! I've had a similar problem with Kandinsky - this was solved using it's 'Screen settings' dialogue to change some of Speedo's settings, however Papyrus has no equivalent dialogue.

I've tried disabling all my .ACC's and auto folder - but this has no effect whatsoever. I've been using Papyrus for about 6 months now with no problems before. But lately I've been doing a lot of programming, course-work, & exams for my degree so I haven't used Papyrus for about 2 months. But I now have to write a report for my project and hand in 3 copies within 10-days! So, as you can probably appreciate, I'm most annoyed!!!

The version of Papyrus I'm using is 3.58, and I'm using NVDI3.01

Thanks for any advice

Craig.

p.s. I'll be sending a copy of this to hisoft.

3975. Re: SM125 Advice Saught

Newsgroup: comp.sys.atari.st
Date: 1995-06-04 00:00:00 UTC
From: aj599@FreeNet.Carleton.CA
Message-ID: <D9ML7J.H9t@freenet.carleton.ca>
Source record: 164443

I posted the comment about the SM125 which I am using right now.
While the monitor is about the same size as the SM124, the usable
area of the screen is almost an inch wider than any SM124 that
I have seen (dozens of them). I also get better screen clarity
from the SM125 than the SM124, and spent about 1000 hours on it
while writing a book over 4 years. It also has a swivel base, which helps improxxxx improve
readability. I still believe it is worth 50% more than
an SM124. Why Atari didn't continue marketing it is anybody's guess.
Logic doesn't prevail in their marketing or lack of it.
If you can buy one go for it. . . . Bob

This may well be the fault of your decompression programs. If you're
using Zoo, be sure you're using a MiNT-aware version (such as
Mint/Utilities/bmintzoo.zoo from atari.archive or a mirror); similarly
for tar (Mint/Utilities/tar-1112.zoo from same). I'm not aware of any
MiNT-aware versions of any other decompression programs.

> So I'm just wondering...what is step "numero uno"? I have MiNT
>1.12, and have a basic understanding of the mint.cnf file. What do I get
>next? Not MiNT+Net, I hope, because net-070 is just the sources. [...]

No, the binaries are in there; they just aren't named the way you
expect. Look in net-070 for net/sockdev.xdd (the socket device driver),
net/drivers/*.xif (the interfaces), and everything in tool/ that isn't a
source file (they don't have .ttp extensions, but they're executables).

Please, Roger - stop writing bullshit. In MausNet one guy just yesterday praised the C-Lab Falcon II, and thought it's very well worth its price. Speaking of "crappy OSes", think of Windoze/DOS, use it, and realize how great TOS 4 is to use, after all... I realized this all too well, after having to work around the clock with Windows Word Perfect 6.1 for one week. It doesn't help much, if you have great software - if your OS makes using it feel like a Stephen King's novel! Unrecoverable application errors, four (!) messed up floppies, out-of-memories (with 8 Mb RAM..), AARRGGGGHHHH!!!

And as my experiences from the Mac-side haven't been too bright either - we have all reasons to wish C-Lab, the EAGLE, Medusa, MacMagiC, and the others best of luck =-) ! I can only pity those who have believed the commercial MicroSoft-propaganda, and changed their horses. Are they happy now? Some probably are, but...

Lord, I miss my Falcon (5 months without it, using Windows and Mac...) !!

Greetings,
Tommi

3980. f/s Falcon Speed

Newsgroup: comp.sys.atari.st
Date: 1995-06-04 00:00:00 UTC

3981. Dextros and BSS Debug?

Newsgroup: comp.sys.atari.st
Date: 1995-06-04 00:00:00 UTC
From: michael grove <mgrove@owens.ridgecrest.ca.us>
Message-ID: <D9Mvow.4yE@ridgecrest.ca.us>
Source record: 164449

Lexicor in the States has said that BSS Debug and Dextros have been
delayed due to BSS working on a Jag game. If this is true does
anyone active (grin) in this area have additional information
on their expected release date? Is Expose getting close to release?

MIke :)

3982. France Falcon Accelerators?

Newsgroup: comp.sys.atari.st
Date: 1995-06-04 00:00:00 UTC
From: michael grove <mgrove@owens.ridgecrest.ca.us>
Message-ID: <D9Mvtr.51C@ridgecrest.ca.us>
Source record: 164450

The ST Format issue 71 contains an article about the Paris Atari show. Included is a brief statement about a Falcon accelerator from Turtle Bay called the Alligator 030 that runs at 42MHZ. They listed the price at L200 (about 300 U.S.). Does anyone have information about installation and hardware compatibility? Do you have to carve the bird to install it? I also read something about Compo's Afterburner. Compo in the U.S. said that project was shelved. Has it been reborn? There was also mention of a 040 for the TT. That sounds like fun too!

MIke :)

: All help/suggestions gratefully received...

G'day Dave, I don't know about using it on a TT (although I'm sure it will work OK) the package to get is AVANT Vector... Don't know the current version but I KNOW that ver 1.2 in/exports both EPS & CVG files as my mate swaps CVG over to EPS and vise versa for me and thats what he does it with....

Good luck, regards

Never heard about it but there is several accelerators in the pipeline with a very interesting from SoundPool that will speed up your falcon's CPU/FPU/DSP to 40MHz *and* have fastram. The price I have heard is about $200 U.S. Very nice indeed if it's coorect. It will also include a sceen expander.:))

mg> listed the price at L200 (about 300 U.S.). Does anyone have

I think (I have seen the advertising in a german mag) GE-Soft have taken over the Afterburner and have it ready now. Afterburner will come in 3 differnet models. Afterburner 040 Falcon, Afterburner 040 ST and Afterburner 030 Falcon.

cheers,
Magnus Kollberg

Message-ID: <h54118.802365317@sakura>
Source record: 164322

Dear Falcon owners,

I have a Falcon Speed AT emulator for sale:

It has a 16 MHz 80286 CPU with a Norton factor up to 12 and
includes EGA/Vgamonochrome graphics emulation.
It runs Windows at 256 colors with a special driver (all included)
and reaches a quite satifactory speed in doing so!

It just plugs into the direct processor expansion slot of the Falcon -
all you have to do is remove a jumper blocking one of the rows of pins.
You can make one partition DOS bootable and the TOS partitions are fully
accessible for DOS too.

I used the emulator to port stuff written in PureC to TurboC, testing it
on the run and the same machine... Now however, I got a separate Pentium,
so I really don't need the Falcon Speed anymore...

I paid about DM 400.-- a couple of months ago (Deutsch Marks that is) -
offers are welcome; just drop me a mail.

Regards,

Christian Goltz
Kyoto, Japan

Compo's Afterburner was now announced by GE-Soft in Germany, the makers of the Eagle. It's prized 1500,- DM and they also announced an 030 board for our bird. And at least they said that they work on an Afterburner for the ST series.

I don't know when and if these products will be available. But hopefully do they make it now.

>>> Ironically, it may be the Tramiel's exit from the stage that may save Atari
>>> for us.

>>Amen..!!

> Have I missed something, or have the Tramiels (watch the punctuation lads!)
> left Atari?

Umm..no... unfortunately not. It was just someone opining that Atari leaving the computer scene leaves the market open for other third-party producers to take over with things like the C-Lab Falcon II and clones like the Medusa and Eagle.

The Tramiel family is still firmly "in control" at Atari.

(Incidentally, since the "exit" belongs to the Tramiels, the use of the posessive apostrophe in the first quoted line is correct, is it not..?)

I disagree; compared to Ballblazer, Masterblazer really sucks.

Too bad that I once exchanged my good ol' 130XE+goodies for a 9 needle
dot matrix printer.

:-)

4009. Psygnosis Games.. - R E A D -

Newsgroup: comp.sys.atari.st
Date: 1995-06-05 00:00:00 UTC
From: sebelt01@starbase.spd.louisville.edu
Message-ID: <3qtmsr$rko@hermes.louisville.edu>
Source record: 164360

Is Psygnosis still in business? If so I need their e-mail address/phone..
If not, is their software now free? If so, can someone send some to me
(using msa, perhaps?) If not (free), would someone like to send me some
using msa (and of course, erase your own copy).

I particularly enjoyed playing Bratticas (sp?) on a friends 520. Will
this software (and other Psygnosis games) run on a 1040STe? Even if no, I
still have my old 520 handy!

P L E A S E contact me if you have some Psygnosis games or info.

4010. Cubase Audio & Peavey SP/SX II

Newsgroup: comp.sys.atari.st
Date: 1995-06-05 00:00:00 UTC
From: michaelk@pacifier.com
Message-ID: <3qtu8g$8u7@news.pacifier.com>
Source record: 164361

I have been unsucessful for over a year in trying to get Cubase Audio to record when I have my Peavey SP/SX II sampling unit in the SCSI chain. I know my termination & I.D.'s are correct. I believe after trying many combinations that the problem either resides with SP/SX or the my Hard Drive.

Within 4 measures after I begin to record everything stops and I get the Message: "HD SCSI Timeout check SCSI connections, ID's & Terminations". ICD Pro indicates the problem this way:
"M SENSE: $29 (8,0)" which means "Power on or reset or bus device reset occurred" with 8 being the ID for the 540meg.

My set-up:
is Atari-Falcon with 80 meg IDE to a Maxtor
230 meg SCSI to a Maxtor 540 meg fast SCSC II (this is the drive I use for hard-disc recording -- using 2 230meg partitions) to 105meg SyQuest to a Glyph cd-rom to the SP (BTW it is 25 pin) to finally the SX (25 pin) which has to be one end as it is perminately terminated.
The 540 meg performance specs are:
Model MXT-540SL
8.5ms avg read, 9.0ms avg write
256KB buffer
6300RPM
transfer rates to 10Mbytes/sec

Now having everything connected as above allows me to play back recorded material but NOT record, UNLESS I take the SP/SX II out of the SCSI chain then everything works fine. My SCSI cabling is no more than 8 feet in total length so that shouldn't be a problem. I've changed replace cabling.

I should mention when I have the SP/SX connected to the SyQuest drive or even with the full chain the SP/SX has no problems communicating via SCSI with the SyQuest.

Has anyone else got experience with the SP/SX and Cubase Audio -- how does it work? Or could my problem be thermal recalibration which only causes problems somehow with the SP/SX or maybe that drive cannot handle that many SCSI items?? I just don't know....(help).

WANTED:

Lattice C
Any/all books on Atari/GEM C Programming

GAMES:
Starflight
Starflight II
(on the cover of the Amiga version it says 'ST Version' so I assume somebody out there must have this. Addicted to it!)

HARDWARE:

Syquest 44m or 88m Removable HD
AdSpeed 16MHz Accelerator (1040STf)

Please reply ASAP if you have any of the above items, reguardless of your location. A friend of mine is going to Sweden July 16th, so if you are Swedish and want to sell me something above, he can pick it up & pay for it then. He will be in a town called 'Shimrishamn' (spelling might be incorrect, my apologies).

4013. TRADE: Printer(s) for CD-ROM Drive <US>

Newsgroup: comp.sys.atari.st
Date: 1995-06-05 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <Jy0d9sQ.lmcclure@delphi.com>
Source record: 164364

Now that I have a laser printer in the house, my three dot matrix printers are sitting idle, so it is time to trade them for something I will use.

That something I am looking for is a SCSI CD-ROM drive. An external unit is preferred, and I single speed drives will be considered. The main criteria is that they work with an ICD AdSCSI+ host adapter on an STe, and hopefully with the SCSI controller on my Amiga as well.

Here is what I am offering in trade:

Printer Model	Approx. Cash Value
Panasonic 1091i	$75
Star NX-1000 Rainbow (color)	$80
Citizen GSX-140 (w/ color kit)	$175

Most of you are likely familiar with the Panasonic and Star models mentioned. The Citizen is a very nice 24-pin printer, with loads of features. If I were going to keep any of these printers, it would definitely be this one.

All these printers are in very good condition, and include original manuals and boxes (although the Star is missing the styrofoam packing blocks for some reason).

Unless someone offers me something like a Toshiba quad-speed external for all three printers, I will be offering the ones that don't get traded off at a later time for other goods.

Of course, I will always accept cash.

It works very well with NVDI 3.02. Papyrus has some problems if you
use it with Screenblaster on a Falcon, as it appears that SB sets
peculiar pixel dimensions in *certain* video modes. Not high
resolutions, nor low resolutions, but *some* resolutions in between.

It seems you are using a bitmap font. Try to use a vector font family.

Regards,
Gerd

(If you REALLY want to use bitmap fonts you have to know that GDOS bitmap fonts
and Signum bitmap fonts assume different screen resolutions. You can set up
papyrus to display one of these correctly but not both. Choose (the right) one.)

4016. Partition Copy

Newsgroup: comp.sys.atari.st
Date: 1995-06-05 00:00:00 UTC
From: Bob Brown <bob@earthlight.co.nz>
Message-ID: <Pine.SUN.3.91.950605211456.16871A-100000@earthlight.co.nz>
Source record: 164367

[Refer: My E drive is poked]

Hi there,
I'm still trying to reclaim my E drive from the clutches of
evil. I picked up a program called Partition Copy
(wuarchive.wustl.edu:/systems/atari/umich.edu/Diskutils/partcopy.lzh)
which is meant to copy one partition to another. Unfortunately, it seems
to be a quick hack and i'm not sure what to supply for the parameters.

My hard drive (Megafile 60) is split into 4 partitions, C (10MB), D
(30MB), E (10MB) and F (10MB). If I can copy the entire contents (image)
of F to E, maybe I can reclaim my space ...

Here's the prompts the program provides.

Enter source SCSI device:
Enter source SCSI unit:
Enter starting sector:
Enter destination SCSI device:
Enter destination SCSI unit:
Enter starting sector:
Enter length:

Now, when I supply 0 for all the parameters (except 1 for the length), I
get told this,

SOURCE: device 0 lun 0 sector 0
DEST: device 0 lun 0 sector 0
copy length 1

Now for the questions: Has anyone used this program before?
What the heck is a lun?

Thanks in advance ...

Don't use ScreenBlaster, use FalconScreen. FS is more compatible
(it even works with MiNT-X!!!). It was supposed to go comercial, but I've
not heard from the author in over a year, so I don't know what happened?

I do have an IDE drive! 170mb internal drive, can't remember who the
manufacturer is. My drive is quite fragmented, but I've tried it on four
different partitions in the hope that one wasn't too fragmented and it
didn't work. I think it must be my drive is just too slow and there's
nothing I can do about it, except get a new drive :-(

Uniterm files can be found all over the place,

but for starters you could press the "Help button", this will leed you to
a screen full of command listings and a Gem-Menubar. If you shop around here
for a while I suppose you'll find the vt100 settings.
Press 'Q' to get back to the terminal..

<Alt-Capslock> toggles <Alt> between "Metakey" and "Alternate" modes.

Hint:
All your defaults should be saved in files called "uniterm.*"
(The program will provide the extenders)

Hope you get your manual soon :)

If C-Lab do relase a 299 machine then I hope that it ISNT the dreaded 1 meg model!!!

Basically they'll have to either try and fiddle 2 or 4 meg in for this price.

Rod

4031. Compton CDs on ST

Newsgroup: comp.sys.atari.st
Date: 1995-06-05 00:00:00 UTC
From: bjr2@Ra.MsState.Edu
Message-ID: <3qvmfi$b8@NNTP.MsState.Edu>
Source record: 164382

I've read somewhere that there is a program available on Genie that allows ST and FAlcon users access to Compton M.O.S.T. format CD ROMS. Is that the same system I frequently see long infomercials about...with the neat interactive games and learning programs? If so...is it the same on the ST or are you only allowed still graphic and text interfaces? Finally, if someone like myself, who isn't on Genie and doesn't intend on doing so wanted to check out this program...where could I find it?

Thanks...
Any tid bits of information on using CD ROM with an ST would be appreciated.
Brian

4032. Will MajicMac run on Power Mac?

Newsgroup: comp.sys.atari.st
Date: 1995-06-05 00:00:00 UTC
From: bjr2@Ra.MsState.Edu
Message-ID: <3qvmos$b8@NNTP.MsState.Edu>

Message-ID: <2275866.ensmtp@net-mac2.edvz.uni-linz.ac.at>
Source record: 164384

Please answer to this message via Email to mkosk@freenet.hut.fi !!

I need a FullScreen Editor for my BBS... it should meet the following
requirements:

1) It should work remotely, naturally, and preferably with VT52 or ANSI or
both

2)It should be able to take the filename as a parameter from the command line

3) There should be a possibility to restrict the user from loading in any
other files into the editor

4) It should also be possible to enter the amount of characters per line in
the command line, before the line is wrapped.
So, if you know of such an editor, please (pretty please) tell me where I can
get hold of it... I'd really appreciate it!! :)

Thanks for your help!

Matti Koskimies

|> HLW> THE operating system for Atari computers.

Hmm. MagiC is very good, but not THE operating system....

|> HLW> It has all the features of MultiTOS v.1.08b (plus more), and it's a

I think all is a bit of an overstatement. It has some, but not all.

|> HLW> lot faster and more stable.

That, at least is true. But it has to be said that if you can get your mits on AES4.1, then you'll find that multiTOS isn't really bad at all, it's just that the released version sucks. AES4.1 is a very nice enviroment - still not as fast as MagiC, but it makes fewer compromises as it runs over MiNT.

|> Does it support Loadable File systems (minix) ? Networking facilities and
|> installable device drivers ?

It does, but from what I hear, they aren't MiNT compatible - MiNT has a C level interface to devices & filesystems, MagiC has an assembler level interface. This makes the MagiC system go faster, but also makes things a little harder to write (what - and MiNT devices were easy to write in the first place?)
This means that minixFS needed re-writing for it, and there is not mint-net compatible TCP/IP at all.

I'm waiting for the MiNT compatible version of Geneva myself......
(esp. as MagiC still doesn't run on a Falcon) - or even MiNA if Martin Oseika ever finishes it.

Craig.

|> (or exec twm &)? I tried out one or the other, but forget what
|> "real" X needs...
|>

This is a problem with twm (on all platforms). You must not start twm
as the first process after X, or it just won't work reliably. What you
should do is

xvt &
twm

And don't use bash - it's to big, use Ash. Xvt is a low resource usage
Xterm replacement.

Another tip - junk twm altogether and use Fvwm. It looks like OSF Motif,
gives you multiple virtual scrolling desktops, button bars, icon managers,
loads of other goodies and still uses less memory than twm.

- like, I can run Fvwm, GoodStuff & Chimera on a 4Meg machine at 864*638

Craig.

Think that Sozobon is the best C compiler for small STs as it is
freeand not too big. If he wants to later he could get the GNU C but
that will mean a memory upgrade.

If he wants Sozobon then get the Heat and Serve version. It is easier
to set up than the old and has a few improvements in it. If you have
no luck getting it then I could send it to you. There is a sort of
Basic on the free discs that came with the Atari, but I could never
get the hang of it!

I regularly help out a near neighbour with his C and C++ problems. He uses
Turbo C(++). Although I have 3 ANSI C compilers and 1 C++ compiler
installed over various Atari and PC systems - I generally come unstuck.

Basically his interpretation of ANSI C (and his lecturer's for that matter)
include a *lot* of Borland specific stuff. Its all pretty obvious - but
its a pain to have to hack the code to make it compile - especially as it
either has compile time or run time errors anyway!

We generally end up using his system - even though it seems less rigorous
than the GCC compiler I favour.

Roland.

It is with great sadness that Chris and I bring you the bad news of
Hendrik Mylius's death.

I myself only found out about this on Friday 3 June, from Manfred
Ssykor. No exact date is known, but it is thought to be around 2 - 3
weeks ago. I think this is about when he stopped posting on Usenet.

Very few details are known about his death.

The posting is being made as a mark of respect to Hendrik, who was very
active in here. I can't think of one person who didn't like him. He was
very helpful and friendly.

I never personally met him, but we had become good friends over the
net. He even posted on csas that he considered me to be his friend...

I don't know what else to say... I still feel empty when I think about
it. I'll miss him. :-(I'm sure many people will too.

You are all invited to pay your respects to him, here, in this thread.

Good bye Hendrik

Denesh Bhabuta
Work: danny@micros.hensa.ac.uk
Cix: dbhabuta@cix

Although I only knew Hen for the relatively short time whilst he was on
the Internet, I feel as though I have lost a good friend. I can only echo
what Danny said about him being a helpful and friendly guy.

We were always having a laugh and a joke about things through email and
I regret that I missed the chance to meet him in real life.

Goodbye Hen.

: - Allen Householder --- adhst2+@pitt.edu -- http://www.pitt.edu/~adhst2 -

The CCC learning system was a turnkey educational multimedia system that
uses the ST as a front end to a mini-based server. The courseware runs on
the ST, which is downloaded from the mini-server. I believe they use the
cart port to interface the St to the server. The system also comes with a
central controller ST for the teacher to monitor the students progress
and has the ability to remote control the other STs from the main ST.
Sort of like the now-defunct Plato learning system.

Try to see if you can also buy the server and the associated software and
coursware. This is a rare find, IMHO.

4053. Re: Our Respects to Hendrik Mylius

Newsgroup: comp.sys.atari.st
Date: 1995-06-06 00:00:00 UTC
From: erichall@io.org
Message-ID: <3r34hf$4l8@ionews.io.org>
Source record: 164154

I'm stunned! Not so much by the announcement of Hendrik's passing, but more by my reaction to it. I _feel_ it and it saddens me greatly and I'm desperately trying to figure out why.....

I didn't _know_ Hendrik. Well, not in any sense that makes any sense! I mean I've never met him face to face, I've never spoken to him on the phone or even exchanged private Email with him. I didn't know his age, his race, his marital status, his political leanings, or his interests aside from the topic of this newsgroup, all the things that we generally use to pigeonhole people so we can say with some confidence "I _knew_ him".

BUT.... in some other, indescribable, and very unsettling way, I did indeed _know_ him, as he was a very visible member of a _family_ that I've spent part of my day with every day for the last 22 months, since I got my account on the net.

I'm truly going to miss him!

Eric

Same thing happens on my TOS 4.02 machine at work when attempting to work
with disks formatted with DOS 6.x, yet formatting the disks on the Falcon
and taking them to the same PC works fine.

Hi Marco,

> I ordered (with advanced payment...) some stuff from FaST Club in
> March. We are in June and nothing has happened.
> Has someone already got in troubles with the people at FaST Club?
> I'll appreciate any comment.

I sell Atari software in Sweden, and I've dealt with FaST Club for almost a year now.

FaST Club is, in my opinion, a very reliable business partner. What I order on a Monday usually arrives here before Friday the same week. Last summer I once got a message saying "Sorry for not delivering immediately, but we're short of staff during July".

I got the stuff ten days after my order.

Something obviously went wrong with your order, Marco. Call Paul Glover on +44-1159 45 52 50 and tell him your story. I'm convinced he'll set things straight immediately, and with an excuse attached.

If not, write me an email about it.

Yours sincerely

RTF doesn't encode using ASCII, it uses either Mac or ANSI encodings
(set at the beginning of the RTF file). I've transferred RTF files
with accents and umlauts in from Papyrus into WordPerfect 6 on a PC,
so I assume it works.

The only things that don't seem to work in Papyrus 3.66 are importing
tables and graphics in RTF.

4070. Long Island AtariMeet!

Newsgroup: comp.sys.atari.st
Date: 1995-06-06 00:00:00 UTC
From: b.poehland@genie.geis.com
Message-ID: <199506070457.AA052951045@relay1.geis.com>
Source record: 164259
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st

June 6, 1995

Fellow Atarians!

Get a pencil and mark your calendars! Grab a phone and call your friends! On June 17th, 1995, NEAR*US will be having an AtariMeet on Long Island!

What's an AtariMeet? Well, it's a get-together with other Atarians from around the NorthEast. It's informal with guest speakers, demos, and Atari goodies to buy, sell & trade. It's where to meet people interested in Atari computers and related products. It's a place to make friends with common interests. It's a place to share information, tips and techniques. Best of all, attendance is FREE!

Our main speaker will be from Wizztronics. Wizztronics continues to support the Atari community with many products like CartMaster, Compatibility Plus, Deka 2 Keyboard interface, and the Falcon Rack. They have brand new products including the Barracuda 040 Accelerator for the Falcon 030 and are continuing work on a several new and exciting projects. This is your chance to find out all the latest, right from the source!

At this time, several other notable Atari developers/vendors have expressed real interest in attending. They represent both 8-bit and ST areas. Some have not committed as of this date, but Nir Dary of OHAUG has shipped his PAL-upgraded 130XE to Ben Poehland in Pennsylvania. Barring unforseen mail snafus, Ben plans to demonstrate this latest 8-bit upgrade which reportedly permits North American 8-bits to run European PAL software without compromising the ability to run NTSC software as well.

There will be tables available for vendors, developers & users wishing to sell and trade Atari related items. Reservations for tables are required, and a small donation is requested to help offset costs. If you are interested in reserving a table, please contact me ASAP!

If you are a vendor or developer of any Atari related products and would like to address the group and/or demo your products, there is time to make your plans right up to the day of the AtariMeet! We want to meet you and will be keeping this AtariMeet as informal as practical to accommodate all interested parties.

During the last 8 months, NEAR*US meetings have drawn Atarians from Connecticut, Massachusetts, New Jersey, New York, and

Pennsylvania. Atarians using many different platforms and with varied backgrounds and skill levels found many common interests, but all with a need for support! Finding support is what NEAR*US is about!

Jonathan C. Mordosky
NEAR*US Interim Chairman

If you need further information, would like to reserve a vender table, or represent a Atari supporting company and would like to address NEAR*US, please feel free to contact me at the following:

on GEnie: J.C.MORDOSKY
on the Internet J.C.MORDOSKY@genie.geis.com
on the IAN & NEAR*US Nets: Jonathan Mordosky
on ACUTE BBS (610) 261-0620: Feedback to SysOp
via US Mail: Jonathan C. Mordosky
P.O. Box 796
Whitehall, PA 18052-0796

What is NEAR*US?

NEAR*US is an association of 8/16/32/64 bit Atari users. It is in a continuing process of reformation. It is non-profit and self-funded. It is not affiliated with Atari Corporation, its subsidiaries or any commercial enterprise. We do not support piracy either directly or implied, or the use of computers for any illegal activity. A short history and more information about past meetings can be found on GEnie and many BBSes.

NEAR*US AtariMeet

Saturday, June 17, 1995 - 12:00 AM to 5:00 PM

Admission is FREE!

Plainview-Old Bethpage Library
999 Old Country Road
Plainview, New York USA

The Plainview-Old Bethpage Library is located in the middle of western Long Island in New York. It is located on a major roadway and is easily accessible from major highways.

Directions from the Long Island Expressway:

Take the Long Island Expressway to Seaford Oyster Bay Expressway (Rt. 135). Take the Expressway south to Exit 10 (Old Country Road). Travel east on Old Country Road about four (4) blocks, the library is on the right. It is a large library with a parking lot in front. Across the street is a large shopping area. The meeting rooms are in the basement.

Directions from the Southern State Parkway:

Take the Southern State Parkway to Exit 28AN (not 28N), the Seaford Oyster Expressway. Take the Expressway north to Exit 10 (Old Country Road). Travel east on Old Country Road about four (4) blocks, the library is on the right. It is a large library with a parking lot in front. Across the street is a large shopping area. The meeting rooms are in the basement.

From: Alan Shen <alansh@terraport.net>
Message-ID: <3r0ktq$4r4@capetown.terraport.net>
Source record: 164263

I have the following system for sale:

Atari Mega 4 ST w/TOS 1.4
Internal 120 MB SCSI HD (ICD Micro Host Adapter)
Spectre GCR Mac Emulator
SC1224 RGB monitor
SM124 mono monitor (swivel base)
Genius mono hand scanner
2 joysticks
original Atari mouse
TONS of software including full versions of Pagestream, Wordflair,
Arabesque, NeoDesk, etc. Lots of games too.

Cost: $600 (Canadian dollars)

I'm not sure what the current exchange rate is, but it's probably around
the $400 range in US$.

I prefer to sell as a whole, but offers will be accepted on components.
Please reply via email. Thanks.

: -320 Mb SCSII Hard Drive.(Up to 4 drives can be fitted internally.)
: -Super Nova Mach 64 graphics card with 2 megs of VRAM
: (capable of 1280 x 1024 256 colours, 800x600 24 bit colour.)
: -Ports:ACSI,SCSII,2 modem ports,2 serial ports,Lan,parallel,MIDI,
: VME,Rom cartridge, TT keyboard port, PC keyboard port, ST mouse
: -Memory: up to 14 megs ST ram, 256 megs TT fast ram.
: -Bus System: 8 Eagle expansion buses.
: -Tos 3.06
: -One Year Warranty

: As well, the 040 upgrade should double the speed of the 030. Running
: video in 256 colour mode is just as fast as running in 2 colour
: mode(mono). For the future, an 060 board is planned. A Falcon sound
: system and DSP board are also being worked on.

What can I say? Exactly what I need. And as it is a tradition here to
think negatively of all Atari hardware-stuff, it's easy to imagine that
in 24 hours at least someone will post here a message like this:
"It's too expensive, it isn't available in my local PC store, Macs have
already Power-PCs, bla bla bla..." ;-)

But as I said: exactly what I need. I used the (even more powerful..)
Medusa T-40 last year in Germany, and fell in love immediately. Eagle
sounds almost better, though.. It's cheaper, already as a basic version
twice as fast as a TT (German ST-Computer magazine's measurements) - and
well designed. Good luck, GE-Soft =-) !!!

>little gem up for my Power Mac.

The short answer is no.

This is because MagiCMac uses the PMMU in 680x0 Macs to create a
virtual memory map for Atari programs (ie it fakes Atari memory
locations). A PowerMac version of MagiCMac would need to include an
emulator for the PMMU code, and this emulation (apparently) would
result in MagiCMac for PowerMac running no faster than on 68040s.

I still think 2B should port it, however.

: |>

: Another tip - junk twm altogether and use Fvwm. It looks like OSF Motif,
: gives you multiple virtual scrolling desktops, button bars, icon managers,
: loads of other goodies and still uses less memory than twm.

Actually, I would rather use fvwm. I run that on my Linux (P90) and
like it very much. Is there a precompiled version of fvwm I can
find? Looked in the ~Mint/X11 directory and saw 9wm... in any
event, for now, to tweak things I'll use twm.

I got further along since then. That's usually the case: I post a
question, then go back to the problem, and usually fix it :-(
So, what happens now is that everything sorta starts fine, but
whenever I try to start an xterm, I get

error 15 errno 32 invalid handle

Here is error.h from the source of xterm:

#define ERROR_TIOCGETP 15 /* spawn: ioctl() failed on TIOCGETP */

#define ERROR_PTYS 32 /* get_pty: not enough ptys */

Dunno which number is which. Seeing that one may be get_pty, I
started about 10 pty's, but still no luck... I changed by shell
from bash to tcsh, since that seems to be more popular (when Iget
things working I'll go back to bash!). If I can find the xterm clone
I'll get that soon, maybe that'll fix me up

:>
:>If you had read my original post I stated quite clearly that it was RGB only.
:>All good demos are. VGA's just can't hack it.

"VGA's just can't hack it" - this is rubbish, there is no good reason apart
from coder laziness why demos shouldn't work on VGA - I should know I've been
very lazy myself in the past!

Don't give me any excuses like 'oh its 60hz' etc, the Falcon video hardware
can easily be made to run at 50hz on a VGA and 99.9% of monitors would have
no problems with this. The only other excuse is the 10% loss of memory bandwidth with VGA
which means you get 10 less dots on the demoscreen ;-)

"Gatesmeister". I like it, I like it.

The Amiga has the *best* OS and it is the *Only* home computer
that will do true multitasking. I know. I have one.
I can and do have 4 or 5 programs up at once plus about 10 or 11
small utility programs that always load and are running.
All on about 3 megs with a bunch to spare. (I have 6 Megs)
When I get on line I have running:

A Terminal program,
DiskMaster II (Dir management prog)
Final Copy II (fine Word processor)
Power Snap
Quite often a DataBase program.

All while on-line via the Terminal program.
while I'm down-loading a file I can do other things instead
of having to wait. For example. If the HD partition is getting full
(while downloading) I can go in and delete or move unwanted
files to make room for the downloaded file.

The Amiga lives and will soon be in production once again.
A new Power-PC based Amiga is the next-gen to come.

Amiga has it's roots in Atari. Atari could have had Amiga (around 1984)
but didn't take it up. They invested money into it's development
but blew the chance to own it and they realy did want to.
Too bad for them. %:^)

I like my Atari and I like my Amiga. I have owned a PC, I have owned
a Mac. I didn't keep them. I'll keep my Atari and I'll keep my Amiga.

The TI99 had a TI9900 processor which was (AFAIK) the first single
chip 16 bit processor (although it was about as powerful as a 8080!)
~~~~
> Newbury NewBrain

I remember this one. It was my first homebuilt computer! They did a
6809 upgrade version with Electronics and Computer Monthly magazine (or
something like that). It was quite a machine with 64k RAM, and stunning
graphics - 256x192 at 16 colours, mixed text/graphics at 1 million pixels
per second drawing rate (used a Thomson CSF 9365 graphics processor). That's
not much worse than the ST is it?

> include a *lot* of Borland specific stuff. <snip snippelisnip>

Hmm

An "interpretation" of ANSI C couldn't include Borland specific stuff, nor could it include Lattice or GNU specific stuff. That means *no* graphics, no windows or AES and no segmentation demanding small or huge memory models. (and no fancy C++ comments // :-)

For short all the system specific stuff goes down the drain and has to be rebuild. Use all of your nonstandard system calls here if you must.

But functions can be build portable. The heavy math that you don't want to do again. The neural nets that prooves the correctnes of the heavy math... Make sure that these parts are written in clean ANSI

There are also ways to buffer away differences giving different systemcalls an identical interface (..yes I know, you knew that)

But still there are interpretations of the standard where the standard is a bit unclear.

My impression is that compilers differ not so much because they can't compile ANSI C correctly, but more because they give meaning to expressions that should have been left undefined (and therefore give warnings).

I read comp.std.c sometimes and allthough I find their discussions a bit on the wild side there are gems to be picked up. I'm sure they will be happy to sort out what is ANSI, ISO or NOT, Give me a hint if you mail them...

Since knowing what your compiler should have done (but didn't) won't help you much I can only recommend you not to write too artistically blurred expressions, but straightforwardly conforming to what "most compilers in the world couldn't misunderstand" :-)

I prefer the over 70's they are usually more mature and in some cases
less animated :)

I've always found the line "come and see my floating point unit darlin, .."
Works quite well :)

I looked on rtfm.mit.edu for a FAQ, but I found none. I bought an Atari 520ST with some sort of expansion module (RAM I think). The problem is, I have no cables whatsoever.

Any information on the hardware, pin assignments, power supply requirements, and pointers to Atari ST specific programming information would be greatly appriciated.

I would especially like a copy of the FAQ since I can't seem to find it myself.

: image) file to work. Does anybody out there knows how can I get sych a
: file from my ST or else can I find it ready ? (I need a TOS 1.2 or 1.4
: image file prefrably 1.2)

Get "ROMSPEED" from an FTP sight. It has a nifty utility to dump your
ROMs to disk (TOS.IMG). You may then use it for your Amiga. If you do
not have TOS 1.2 or higher, then you must do as all others have done and
purchase a better version.

After having located version 3.01, it fails to recognise my ENTIRE hard drive. I used a program to copy drive F's partition info to E, and now I can't even access C ...

I'm getting desperate here folks ... my finger is twitching above the 'Format' option, but i've got too much data to loose. I know the partition ID's have to be unique, and I think E and F now have the same partition ID. Is there a program that will allow me to edit this without having the HD driver loaded ('cos it wont load!)

sob The Joys of owning an Atari ST w/ a Hard Drive *sob*

I guess it's one way of learning by expierence to BACK UP YOUR HARD DISK OFTEN! Grrrgrgrrrrr ...

4123. Falcon bombs with HD disks

Newsgroup: comp.sys.atari.st
Date: 1995-06-06 00:00:00 UTC
From: cm3hirjd@bs47c.staffs.ac.uk
Message-ID: <3r17jt$19e@bs33n.staffs.ac.uk>
Source record: 164336

I've a Falcon with TOS 4.02 and have found a rather nasty little bug.
Get a ***PC*** formatted high density disk, slam it in drive A: and try
to copy a FOLDER full of files onto it.

On my system it gives me 2 bombs everytime. Even when using programs
like Kobold. Only happens with PC formatted disks, not with disks
formatted with the Desktop. Also tried it on a TOS 4.01 and 4.92 and
same error, 2 bombs.

Anyone know of a patch/reason for this?

It is with great sadness that Chris and I bring you the bad news of Hendrik Mylius's death.

I myself only found out about this on Friday 3 June, from Manfred Ssykor. No exact date is known, but it is thought to be around 2 - 3 weeks ago. I think this is about when he stopped posting on Usenet.

Very few details are known about his death.

The posting is being made as a mark of respect to Hendrik, who was very active in here. I can't think of one person who didn't like him. He was very helpful and friendly.

I never personally met him, but we had become good friends over the net. He even posted on csas that he considered me to be his friend...

I don't know what else to say... I still feel empty when I think about it. I'll miss him. :-(I'm sure many people will too.

You are all invited to pay your respects to him, here, in this thread.

Good bye Hendrik

Although I only knew Hen for the relatively short time whilst he was on the Internet, I feel as though I have lost a good friend. I can only echo what Danny said about him being a helpful and friendly guy.

We were always having a laugh and a joke about things through email and I regret that I missed the chance to meet him in real life.

Goodbye Hen.

--Chris

Work: C.Ridd@imc.exec.nhs.uk
Cix: chrisridd@cix

This news came as a shock, I have been in contact with and enjoyed reading mail from Hendrik for some time now. He was always helpful, and informative and I had nothing but the highest regard for him. Like many people I write to on a regular basis I came to think of him as a friend and it was always a pleasure to read his posts.

I will miss him and feel this group will be a little emptier without his presence. I'm lost for words. I'll always remember and carry his words in my mind.

Goodbye Hendrik.

Message-ID: <3r1c18$1bu@bs33n.staffs.ac.uk>
Source record: 164342

I'm currently working on a new game for the ST and STE (it will be 'e' enhanced). I'm doing all the main graphics for it including much raytracing for the intro sequences but I can't do it all. Therefore is there anyone out there who is a dab-hand with a paint package and would like to help me with the graphics. Ideally you would be designing background scenery and sprites (of which I've already drawn over 200).

This is a commercial product to be properly boxed and distributed and advertised, you would be receiving a percentage of sales. Please either write to me at:- R.Davey, 10 Oak Drive, Portishead, Bristol, BS20 8QS or you can call me on (01275) 843241 or email me: richard.davey@cbbs.centron.com.

I'm also interested in hearing from *any* other graphic artists/musicians who work on actively on the Atari.

Richard

>> Rod

Here's my suggestions for an ultra cheap Falcon.

2meg minimum.

Redesign the casing, the Atari casing is hideous, and seems to
me to be designed to bring on premature RSI.

Make the casing black

Remove cartridge port/TV ariel port to save costs.
Remove SCSI-II interface to cut costs, IDE only.

SIMMS instead of the stupid Atari system. Typical Atari,
puts SIMMS in the STE, everyone loves them, then reverts
to its own system for the Falcon. System should be able
to support 2,4,8 and 14 meg configurations.

32KHz 030.

299 UKPS

avaliable yesterday.

Les

And if they want to learn GFA Basic, I seem to remember GFA 2.5 is now
available as shareware. And in the past, the GFA 3 interpreter has been
given away on cover disks in the UK. Maybe some kind person would send
you them.

Err I know this is not really 'ethical', but if you get a copy of DBA
Magazine issue 12 (on most good ftp sites, you know where) it has a
utility with it which sits on-top of the Apex demo and lets you save out
your pictures.

Having said this you REALLY ought to get the original.

Image Copy 3.5
Does all the above including adjustable dithering.
Does it *VERY* fast too (esp. on a Falcon).
Much better than GemView IMHO.

Don't quote me on locked palettes though, but considering how easy it
would be to write a program to batch convert a whole load of picture
palettes its not a big thing.

For the STE??? Ummm I doubt if its possible.
But Graoumf Tracker on the Falcon gives the best playback (much better
than Digital or MegaTracker) if you have access to one of these machines.

Do you prefer British computers only? What about Atari series: 400, 1200,
1200XL, 600XL, 800XL, 65XE, 130XE, 800XE (sic!), 1400XL, 1450XLD, 65XEP
(portable!),...
Commodore: C-16, C-116, C+4...
Sinclair: ZX Spectrum+, ZX Spectrum +2, ZX Spectrum +3
Amstrad-Schneider: CPC 464, CPC 664, CPC 6128, PCW 1512...
Timex: 2048, 2068...

8-bit computers manufactured in Eastern Block:

- Elwro 800 Junior (Poland)
- Meritum, Meritum II (Poland)
- Bosman/8 (Poland)

- Mikrosha (Soviet Union)
- Elektronika K... (I don't remember what) (Soviet Union)

... and probably many many others... Your collection looks _very_ incomplete
:)))

Bye

Konrad

>

To upgrade to 2Mb, you will need to take out the 4 256k SIMMS, and
replace them with 30pin 1Mb SIMMS. As far as I can remember the speed
isn't particularly important. However, if you're going to upgrade, why
not jump to 2.5Mb, and use a little software patch to get the extra .5Mb.
On the other hand, if you can afford it, I would recommend you jump
straight to 4Mb.

As for the hard drive port, it is actually a DMA port designed
specifically for Atari hard drives. Most people plug in a SCSI host
adapter, like ICD's Link, or and IDE adapter (not too common), at which
point you can use a normal external SCSI or IDE hard drive.

>

Sorry, it looks like the first half of my letter got lost somewhere.
What I wanted to ask is if someone have transferred RTF files from Papyrus to
Word or Pagestream on a Macintosh. I tried to do that but Word 5 didn't
recognize it as a RTF file. Perhaps I should try to import it on WordPerfect
instead?

I have Papyrus 3.07 and it won't even import RTF files properly, so what I do
is import the RTF-file to the Papyrus 3.6 Demo and save it as a PAP file but
you can't save more than one-page RTF documents on the demo.

I think the idea of 2meg *minimum* is essential though, as for SCSI,that
is almost essential these days. Also I doubt the cartridge port
costs more that about 60p to keep in the machine, and for the likes
of scanners is quite useful. However I do think that if C-lab intend
to market it they should include some sort of bundle, how about Apex
Lite (a striped down version of Apex, which you can upgrade if neccesary)!
If I saw that running I'd be well impressed! I'm sure that Apex would
have the same effect as bundling Delux Paint had for the Amiga.

I agree fully in your statements. BUT AES 4.1 STILL needs some serious optimations here and there. The features are good indeed, but it's just too slow.
Some decent disk-/file handling routines would also be desirable, MultiTOS can't copy disk in the background without blocking the other tasks.

There are several for the Falcon. My favortite is MegaTracker, it supports
up to 32 channels in 50 Khz. The sound is superb! :-)
I have about a hundred S3M mods, mostly from my PC friends.

Keep Cool and FLying...

ChainXOR...

: read german. Can the SCC.PRG program be used as is, or do the settings
: need to be changed for the Falcon? Is so, can someone send me a copy of
: SCC.PRG properly set up for the Falcon. Thanks!

Sure, the SCC.PRG can be used as-is. However, to use it to its fullest
you should have it set to replace baud rates, that is slow and unused
ones, with new faster ones (115200, 57600, and 38400 bps). If you have
read the docs and still have problems, then I will send you my version
and its settings. My Email address is in this message header.

Don't forget, in order for SCC.PRG to work it needs to have DRVIN.PRG
installed first (before it in the AUTO folder).

4151. Kobold 3.0!

Newsgroup: comp.sys.atari.st
Date: 1995-06-07 00:00:00 UTC
From: matija@sirius.ijs.si
Message-ID: <1995Jun7.121217.1962@cathy.ijs.si>
Source record: 164176

Lookie what I found in my mail a few days ago: an upgrade notice for Kobold.
Apparently a new version, 3.0 is out or due out soon. From the release
it looks like it supports minix partitions, and different fonts in the display.
The display can also be resized (my major complaint previously).
Good stuff! I'll let you know more when I get it.

I use Hsmoda6 on my Falcon (TOS 4.04, 4 MB) without any problems and
without any change in settings. Note that you need to load TWO programs,
and in the correct order. Sorry, I don't have my machine here so I can't
check which ones and what order, but I didn't change any settings from the
default.

> instead?

I have transferred RTF files from Marcel to Word 5.2 on a MAC with good
results. When you are loading the file into the MAC,make sure it does no
character translation (ie transfer it as a binary file).

I am well aware of the advantages of SCSI, thank you.
However it puts the cost up considerably, and for
people who are not into DTD it is by
no means essential. IDE drives are also considerably
cheaper at least in the UK.

I had difficulties with transfering RTF from Papyrus to Word, basically
I found that by using a font which was on both machines (Dutch 801)
there were NO difficulties.

It is my understanding that ICD Incorporated has solved this problem. For the TT's and Falcon's all you would need is a software patch (aka, new driver). For the other's requiring use of the DMA/Host Adapters, you would need a modified DB25pin SCSI cable that supplies termination power to pin 25 for the ZIP drive to see. The ZIP drive also can only be configured to SCSI ID's 5 or 6 only (no other value). For further info, contact ICD directly. They have a GEnie account as ICD.

Atari Web Pages Latest News
~~~~~ ~~~ ~~~~~ ~~~~~~ ~~~~

Version 1.0
~~~~~~~ ~~~

Date 6/6/95
~~~~ ~~~~~~

by

Mark Stephen Smith
~~~~ ~~~~~~~ ~~~~~

6th Update
~~~ ~~~~~~

================================================================================

Foreword
~~~~~~~~

Hello and welcome to the news item on the Atari Web pages. This document
will describe the Atari Web pages as provided by Mark Stephen Smith and will
inlcude a list of the latest updates for the month. Each month I hope to update
this text with the very latest additions and news on the Atari Web pages.

Hopefully these pages will provide an invaluable service to their users, but
they are still at an early stage and developing all the time. As such any
feedback and support you may have for these pages is more than welcome, it is
infact encouraged. The more input I get from its users the better, as then I
will know what is good and bad about these pages and can change them
approproately in the hope of increasing their value to their readers.

Now on with the show.

================================================================================

News and Changes
~~~~ ~~~ ~~~~~~~

Well since the original description a lot has happened. I'm now involved in
several projects, and submit work to several Internet and diskmag sources for
inclusion. I have also officially took over the maintenance of the Atari FTP
list from Hallvard Tangeraas of which there have been a couple of updates.

New items in this document since the last copy will be marked with **, updates
will be marked with a U. All new items are also listed below according to the
date they were added.
```

I apologise for the lateness of this update but my workload has been too large to take the time until now to do this. Please make a note of the sites new address and update any links or bookmarks to the Atari pages to the new address. Thank you!

The new items this month are:

2/6/95 -- Two Reviews of Checkered Flag added for the Jaguar
2/6/95 -- CAIN Newsletter Volume 2. No.4
2/6/95 -- HENSA Atari TOS Newsletter Volume 8. No.9. in HTML format
2/6/95 -- HENSA Atari TOS Newsletter Volume 8. No.9
23/5/95 -- Games Tips, Cheats and Solutions section added
23/5/95 -- Robinsons Requiems Tips
23/5/95 -- Iron Soldier All Weapons and Levels Available Cheat
23/5/95 -- Iron Soldier Unlimited Ammo Cheat
23/5/95 -- Comming Soon for the Jaguar Updated!
22/5/95 -- AEO Newsletter for Jaguar reporting on the E3 show in ZIP and text format
22/5/95 -- Falcon news section format altered so it links to Falcon Hensa newsletters rather than duplicating them here.
22/5/95 -- ST news section format altered so it links to TOS Hensa newsletters rather than duplicating them here.
22/5/95 -- Questions and Answers Q.3 answered, and Q.16 and Q.17 added
10/5/95 -- HENSA Atari TOS Newsletter Volume 8. No.8. update
10/5/95 -- Rod McCall's Falcon Pages link added
10/5/95 -- Bobby Tribble's Atari Link Directory Pages link added
10/5/95 -- Stuart Denman's (Author of Speed of Light) Pages link added
10/5/85 -- Promotional Video for Jaguar
10/5/95 -- Baldies CD Jaguar News
10/5/95 -- The Nordvic Atari Show 1995 Announcement
10/5/95 -- Fried Bits Coding Covention III Results
10/5/95 -- Freedom Fileselector Announcement
10/5/95 -- Substation News
10/5/95 -- Secret Level Codes for Hover Strike on the Jaguar
9/5/95 -- More Hover Strike reviews and comments for the Jaguar
9/5/95 -- Dragon : The Bruce Lee Story Review for the Jaguar
9/5/95 -- Small trick for Hover Strike on the Jaguar
9/5/95 -- Zool 2 cheat for the Jaguar
9/5/95 -- Jaguar FAQ update
9/5/95 -- Lynx FAQ update
4/5/95 -- Several Hover Strike reviews and comments for the Jaguar
3/5/95 -- Falcon Owners List by rod McCall
3/5/95 -- Falcon Developers List by Rod McCall
3/5/95 -- Falcon BBS List
2/5/95 -- 3 Demos each under 96K from the Fried Bits III Convention
2/5/95 -- Towers II: The Plight of the Stargazer Review by Mark Stephen Smith

==========

What are the Atari Web pages?
~~~~ ~~~ ~~~ ~~~~~ ~~~ ~~~~~
~~~~

These are a collection of pages covering all formats of the Atari. In these pages may be found the latest news, reviews, software for downloading, and various other information and links to other places of interest to Atari users.

I have tried to make the structure of these pages easy to follow and as intuitive as possible but there is still a lot of work to be done yet.

==========

How do I access them and what is the Web?
~~~ ~~ ~ ~~~~~~ ~~~~ ~~~ ~~~~ ~~ ~~~ ~~~

First of all I shall look at what the Web is or to use its full name the World Wide Web. The Web is new way of accessing the Internet, unlike previous methods where you were required to enter commands into the program you were using the Web uses a more user driven method of getting around the Internet. This method is much more graphical than former methods and as such is much easier to get to grips with.

When using a Web browser (the name given to a program used to access Web pages) the control method usually consists of a point and click operation. A Web page will consist of text and graphics which are sometimes highlighted in some way to indicate that they are selectable and link to more information or a particular piece of data.

Such a link is reffered to as a hyperlink. In fact the whole system is a variation on hypertext and uses a script to create each page. Each script is written to a HTML (HyperText Markup Language) standard which contains the main body of text in the page and a few command tags for the browser as to how to format the page and what to do with links, etc.

Web pages may contain text, graphics, sounds, and animations, although the later two are normally supported through external software. It is also possible using the Web to gain access to newsgroups, ftp sites, and gopher services all through the one program. As such this makes this a very powerful tool for Internet access, and coupled with its ease of use this has suddenly became the big thing in the recent Internet explosion into the media.

Browsers can handle all properly written HTML scripts but may vary in operation when scripts are incorrect or contain mistakes. Browsers can be divided into to distinct types, graphical and text only. Popular graphical browsers include NCSA's Mosaic and the recent new browser NetScape. On the text side Lynx is the most popular textual browser (NOTE: text browsers don't show any form of graphics).

To access the Web you must either use one of the above mentioned browsers on a machine such as a Sun, PC or Mactintosh, or if you want to access it via your Atari you will need a copy of the Lynx browser as unfortunately there aren't any graphical browsers YET for the Atari.

==========

Where do I find the Atari Web page?
~~~~~ ~~ ~ ~~~~ ~~~ ~~~~~ ~~~ ~~~~

From your Web browser choose to open URL and enter the following address:

http://www.mcc.ac.uk/~dlms/atari.html

If you can store a hotlist of addresses or something similar on your browser then it may be worth including this address for quick access in the future.

Once you've done that you should see my main page so I hope you enjoy it, and don't forget to write with your thoughts.

(*NOTE*: This is the new site for the Atari Web pages, take note of it!)

==========

U What you will find in the Web pages every month.
~~~~ ~~~ ~~~~ ~~~~ ~~ ~~~ ~~~ ~~~~~ ~~~~~ ~~~~~

From the main menu you have several links available to you, some under miscellaneous and others specific to a particular machine, or collection of machines. It is now possible to mail me directly from the Web pages, special thanks also to Frank Charlton for the new Atari Logo. First I will look at what will be in the Miscellaneous section.

****

Atari Related links, Documents, FAQ's and Newsletters
~~~~~ ~~~~~~~ ~~~~~ ~~~~~~~~~ ~~~~~ ~~~ ~~~~~~~~~~

First in the list are "Atari Related Links", these links are to other sources of Atari information or data (such as files, etc.).

There is a link to many of the major Atari holding FTP sites on the Internet. Links to several Web pages by different people on the Atari. This will grow as worthwhile sites come up. At the moment you can visit:

- HENSA to download Atari files (Moderated by Denesh Bhabuta)
- ZFC's Atari Pages by Annius V. Groenink. This has links to various Atari related places, along with talk of his own work on Edith and his new Drive U Project. Annius is also working on a version of the Mosaic browser for the Atari and the best of luck goes to him on that.
- Christer Gustavsson's Atari Gem Programmers Page. Very useful information for programmers grapling with Gem and the operating system. Also offers help via his questions answers page. Some links can be found to Atari related places.
- CAIN Atari Pages. CAIN is the Central Atari Information Network and they create a newsletter which is updately monthly on all things new to do with the Atari. There are also links available here.
- Martin Maisey's Atari Pages. Contains information (downloadable) on programs written by himself for the Atari. Again there are links to other Atari places.
- Toad Computers Pages. Stockiest and retailer of many Atari goods.
- ST Format Pages. Information and previews of ST Format issues.
- Volker Burggraf Atari Pages (German).
- Desert Star Software Home Page.
- ST Assembler Page
- BSM's Home Page

- ST Beer Mat Page
- The Organised Chaos Licenseware Home Page
- Index of /~jschlich/Jaguar/
- Lynx Pages
- Atari Lynx Page
- Atari Page by Frank Post (Partially German, partially English)
- MiNTOS Distribution and Information Page
- Julian's Atari Page
- Atari Ghostscript
- Atari Page by Robert Krenn
- Simon Gornall's Atari Pages
- Ben Halls Page (KSculpt + Calamus Information)
- "Data Uncertain" Software
- Kay's Home (MintNet)
- CNAM Atari Pages
- EMAGIC Users Page (Covers Atari)
- Helmut's Project contains Atari Links (English and German)
- Eero Tamminen's Atari Pages
- Atari Programmers Page
- Atari Users List
- Impulse Home Page (Demo Crew)
- NPG Home Page (Demo Crew)
- Atari Page by Dirk Klemmt
- Steve's Atari WWW Pages
- The Guitar Reference (For the Atari)
- Musings of an Amateur Hacker
- The Atari Home Page by Martijn Dekker
- Tecnation Sonovista (Falcon based computer)
- Cybercube WWW Page (Atari Products)
- Yak's Zoo
- Atari Jaguar 64-Bit Game Machine Stuff
- 8 Bit Atari Page by Ivo van Poorten
- Atari Jaguar Homepage by Christian Svensson (very good and kept up to date)
- Jaguar directory
**Stuart Denman's (Author of Speed of Light) Pages
**Rod McCall's Falcon Pages
**Bobby Tribble's Atari Link Directory Pages

Documents
~~~~~~~~~

Useful documents will appear in here. At the moment there is:

- Atari FTP List by Mark Stephen Smith (essential for the latest news on who provides Atari FTP sites).
- Atari TOS Desktop Survival Kit by Thomas J Hopper. An essential guide to getting the most out of your DESKTOP.INF and NEWSDESK.INF files.
- Recommended list of software for the Atari by Denesh Bhabuta. List compiled by Denesh for me of his best software for the Atari (updates coming soon). Mostly PD and Shareware, this list contains links to download most of the software mentioned.
~~~~~~~~~

- Information on picture formats by Dave Bagget. Lots of information on the format of different picture files for the Atari.
- Information on Viruses.

FAQ's (Frequently Asked Questions)
~~~~~ ~~~~~~~~~~ ~~~~~ ~~~~~~~~~

Useful FAQ's will appear here. At the moment there is:

- Atari ST SLIP FAQ. This is a guide to connecting your Atari to a network. All you want to know about networks and the Atari.
- Atari CD FAQ. Information on getting and using CD's on the Atari. Regular updates to this can be found in my pages.
- GDOS FAQ by Gerd Castan. Got a question on GDOS then this is the place to look.
- MiNTNet FAQ by Christer Gustavsson. Everything you wanted to know about MiNTNet.
- AtariNOS FAQ by Frank Charlton. Answered questions and information on NOS.

Newsletters
~~~~~~~~~~~

Although there may be more to come the following newsletters are updated promptly as I receive them. These have been re-organised to make it easier to keep track of. At the moment there is:

U CAIN Newsletter containing the latest Atari news.
U HENSA Newsletter containing the latest updates to the HENSA Atari archive.
**The HENSA newsletters are now available in HTML form also.
U AEO Newsletter containing the latest Atari news.

Newsgroups
~~~~~~~~~~

Atari related newsgroups. Send updates. The currently supported news are:

comp.binaries.atari.st
comp.sys.atari.advocacy
comp.sys.atari.announce
comp.sys.atari.st
comp.sys.atari.st.tech
comp.sys.atari.programmer
rec.games.video.atari
alt.games.lynx

****

U Questions and Answers
~~~~~~~~~ ~~~ ~~~~~~~

Submit your questions to here and get them included in this page. Answers are open to anyone who has something valid to say, and help is provided to me on Programming and Music questions by several knowledgeable sources. Please support this section, only by your interaction and questions will it survive.

All answers are included in this page for anyone else with the same question and answers are also sent back to the person who submitted the question for those without Web access.

If you feel you have an expertise in a particular area concerning the Atari and would be willing to answer questions on that area when and if I submitted them to you, then please let me know and you can join the team. Programming and Music are fairly well covered and I can cover Graphics programs, help with Technical questions would be appreciated.

****

Reviews
~~~~~~~

Here I hope to include reviews of Atari products both new an old. So far I have the following reviews:

- Kobold review by Andy Curtis (ST Format)
- Flash 2 review by Frank Charlton (ST Format)
- Edith Professional review by Frank Charlton (ST Format)
- MagiC review by Andy Curtis (ST Format)
- Stello v2 review by Mark Stephen Smith (Myself)
- Sportster Modem review by Frank Charlton (ST Format)
- Storm Tracker review by Andy Curtis (ST Format)
- Connect review by Frank Charlton (ST Format)
- Zero 5 review by Frank Charlton (ST Format)
- MIDI Grid review by Andy Curtis (ST Format)
**Towers II: The Plight of the Stargazer Review by Mark Stephen Smith

There are several reviews on the way by the above mentioned people aswell as some by myself. This section is now growing well now and Nick Peers from ST format recently expressed his interest in writing some reviews also.

Again if you feel you would like to submit reviews for inclusion then please write to me. Please note these pages don't include Lynx and Jaguar Reviews, as they are contained within their own pages.

****

News and Announcements Pages
~~~~ ~~~ ~~~~~~~~~~~~~ ~~~~~

Latest Atari news, and announcements from the Atari World. Currently contains the following:

**The Nordvic Atari Show 1995 Announcement
**Fried Bits Coding Covention III Results
**Freedom Fileselector Announcement
**Substation News
- Nova Graphics Board Announcement
- Sozobon C Announcment
- FTP site Announcment
- Fried Bits Eastern Coding Convention 3 Announcement

- Portfolio Club Announcement
- Towers II release Announcement
- Universal Virus Killer Book Announcement

****

**Games Tips, Cheats and Solutions
~~~~~ ~~~~ ~~~~~~ ~~~ ~~~~~~~~~

This is a new section introduced to help the Atari gaming community. It covers all Atari formats but is currently divided into the following areas:

Atari Computers
~~~~~ ~~~~~~~~~

Tips and cheats for all Atari computers. Cheats included are:

**Robinsons Requiems Tips

Atari Jaguar Console
~~~~~ ~~~~~~ ~~~~~~~

Tips and cheats for the Jaguar. Cheats included are:

**Iron Soldier All Weapons and Levels Available Cheat
**Iron Soldier Unlimited Ammo Cheat

Atari Lynx Console
~~~~~ ~~~~ ~~~~~~~

Tips and cheats for the Lynx. This section is currently empty.

Submission of game tips, cheats and solutions for any Atari format are welcomed and should be mailed to me.

****

Updates and Information on these Web Pages
~~~~~~~ ~~~ ~~~~~~~~~~ ~~ ~~~~~ ~~~ ~~~~~

All updates and news on the Atari Web pages goes in here. Previews of whats to come soon are included and new items or updates to the pages are listed according to date with the most recent being first. Most updates contain links to the new material for instant access.

Other things to be found in here are the number of accesses to the Atari pages. At the moment this is not supported.

****

This now concludes the Miscellaneous section. Now onto the Other Pages. These pages are specific to a particular machine, or collection of machines. These are going to go through some major changes and you can expect a fair number of changes to be made to these in the next month or so.

****
~~~~~~~

Falcon Page
~~~~~~ ~~~~

This will contain information and files relevant to the Atari Falcon, currently this page is divided into the following areas:

News and Previews
~~~~ ~~~ ~~~~~~~~

In here expect to see any news or previews that come my way, whether they be small descriptions or full features with pictures. At the moment there is:

- Pinball Dreams and Llama Zap News.
- Apex News. This contains some information I got on Apex Media for the Falcon when I spoke to Douglas Little on the phone a few weeks back. Not very detailed unfortunately, but I'm waiting on my copy of Apex to give a full review so expect that to be rectified soon.
- Dextrous News. Small description of some of the features of Dextrous with a picture. Only at an early stage of development, if I hear more it will go in here.
- Towers II : Plight of the Stargazer. Pictures and description of this great looking Falcon only sequel to Towers. Expect the demo soon.
- Towers II : Plight of the Stargazer Update! The latest news on developments.

HENSA Atari Falcon letters are no longer duplicated and held in this area. Instead there is now a link from this page to the HENSA Atari Falcon Newsletter page.

Misc
~~~~

Miscellaneous information on the Falcon, including:

- Falcon Demo FAQ. List of Demos for the Falcon, including some form of information on each.
- Compatibility list of games with Falcon.
- Compatibility list of applications with Falcon.
- Falcon Specifications and Information compiled by Rod McCall.
**Falcon Owners List by rod McCall
**Falcon Developers List by Rod McCall
**Falcon BBS List

New Software
~~~ ~~~~~~~~

The latest Falcon/enhanced software available for download. Major revisions to be done with updates here. All files now list there size so you can see how large they are before downloading. At the moment the following software is included, with more to come:

**3 Demos each under 96K from the Fried Bits III Convention
- Apex Media Demo (Demo version of the animation and art package for the Falcon)
- Towers II (Shareware game)
- Super Bomber Man (freeware)
- Play MPEG v0.70 by M.D.Griffths (shareware)

- Speed of Light v3.8 (shareware picture viewer)
- Scape a planetary landsacpe generator.
- Digital Tracker demo of commercial version.
- Obsession 1 level demo.
- FOG issue 8 diskmagazine for Falcon.

Other software worth having
~~~~~ ~~~~~~~~ ~~~~~ ~~~~~~

Software worth using on the Falcon.

- Backward v2.52. For compatibility with the ST. Please send any versions
which are newer than this.
- MultiBlow. Configurable overscan utility.
- Starball. Excellent pinball game (Falcon enhanced).
- Berzerk. Excellent version of Berzerk (Faster on Falcon).
- FOG issue 7 diskmagazine for Falcon.
- FOG issue 6 diskmagazine for Falcon.

****

Atari ST/STE/TT/Mega STE Page
~~~~~ ~~~~~~~~~~~~~~~~~ ~~~~

This will contain information and files relevant to all the above mentioned
Atari formats, currently this page is divided into the following areas:

News
~~~~

In here expect to see any news or previews that come my way, whether they are
small descriptions or full features with pictures. At the moment there is:

HENSA Atari TOS letters are no longer duplicated and held in this area. Instead
there is now a link from this page to the HENSA Atari TOS Newsletter page.

New Software
~~~ ~~~~~~~~

The latest (most recent versions) software available for download. Major
revisions to be done with updates. All files now list there size so you can see
how large they are before downloading. At the moment the following software is
included, with lots more to come:

- Speed of Light v3.8 (shareware picture viewer).
- ST Zip v2.6. Latest version of ST Zip.
- Obsession demo. 1 level of this great pinball game.

Other Software worth having
~~~~~ ~~~~~~~~ ~~~~~ ~~~~~~

Software worth having on the Atari.

- Utopus. Two player shootem' up (STE only).
- Ozone. Good platform/puzzler.
~~~~~

- Starball. Excellent pinball game.
- Berzerk. Excellent version of Berzerk.

****

Lynx Page
~~~~ ~~~~

All the latest news and reviews on the lynx, along with cheats, etc. This page is divided in to the following areas:

News
~~~~

News on the Lynx and related material. At the moment there is:

- Lynx Summer Steal Deal Extended to the Fall. News of price reductions for a limited period.

Reviews
~~~~~~~

Reviews for just about every Lynx game ever released will appear in here. All reviews are by Robert Jung. At the moment the following reviews are included:

APB Awesome Golf Baseball Heroes
Batman Returns Basket Brawl Bill and Ted's
BlockOut BattleWheels Blue Lightning
California Games Checkered Flag Chip's Challenge
Crystal Mines II Dino Olympics Dirty Larry:Renegade Cop
Dracula the Undead Double Dragon Desert Strike
Electro Cop European Soccer Chal. Ultimate Chess Chal.
Gauntlet:3rd Encounter Gordo 106 Hard Driven'
Hockey Hydra Ishido : Way of Stones
Jimmy Conners' Tennis Joust Klax
Kungfood Lemmings Lynx Casino
Malibu Bikini Volleyball Ms.Pac-Man
NFL Football Ninja Gaiden
Ninja Gaiden III : The Ancient Shop of Doom

Other Lynx Stuff
~~~~~ ~~~~ ~~~~~

Other items of interest to Lynx owners. At the moment there is the following:

U Lynx FAQ
- Lynx Tips and Tricks

New Software Anouncement
~~~ ~~~~~~~~ ~~~~~~~~~~

Currently empty.

****
~~~

Jaguar Page
~~~~~~ ~~~~

All the latest news and reviews on the lynx, along with cheats, etc. This page
is divided in to the following areas:

News and Previews
~~~~ ~~~ ~~~~~~~~

All the latest news and preview information I can find related to the Jaguar.

**Baldies CD Jaguar News
- ECTS News
- Hyper Image page linked to (Makers of Jaguar game Hover Hunter).
- Jaguar CD Specifications
- Rebellion Development News
- Sinister Developments News
- Sensible Soccer News

Wolfenstein 3D - by Robert Jung
Wolfenstein 3D - by ?????

There are many more reviews to come.

Other Jaguar Stuff
~~~~~ ~~~~~~ ~~~~~

Miscellaneous information on the Jaguar. Information included presently is:

U Jaguar FAQ
- Raiden Tips
- Jaguar Game Cheats
- Kasumi Ninja FAQ
- Ultra Vortex FAQ update for Jaguar
- 50/60 Hz, games adjusting to resolutions list
- Jaguar Game Cheats
- More Raiden Tips
- Kasumi Ninja Moves List
**Secret Level Codes for Hover Strike on the Jaguar
**Small trick for Hover Strike on the Jaguar
**Zool 2 cheat for the Jaguar
**Promotional Video for Jaguar

Other Jaguar Pages
~~~~~ ~~~~~~ ~~~~~

Other pages specific to the Jaguar included in here. Currently there is:

- Atari Jaguar Homepage by Christian Svensson

There are others that will be included, some containing more recent news, but
the one above is the most organised and intuitive one I've came across.

****

8 Bit Atari Page by Ivo van Poorten
~ ~~~ ~~~~~ ~~~~ ~~ ~~~ ~~~ ~~~~~~~

Not maintained by me these pages cover the 8 bit formats of Atari machines and
are very comprehensive. Nearly everything you could hope to find is contained
within these pages.

****

What to expect in the future
~~~~ ~~ ~~~~~~ ~~ ~~~ ~~~~~~
~~~~

Some structural changes are likely to appear in the next months. I have introduced an announcements page where you can tell the World of anything you have to announce. Please send news of updates to your programs, Atari stuff for sale, and any other Atari announcements here (NOTE : Commercial companies should send information on products to be included in here and in the news sections).

This month saw the introduction of the games Cheats, Tips and Solutions area. Currently this is fairly empty but will grow, your support would be welcome. This section covers all Atari formats including the 8 bit machines and consoles. It is currently split into Atari computers, the Jaguar and the Lynx areas.

In the near future I will be adding a Portfolio section to cover the portable computer by Atari called the Portfolio. This area will be supported by Jan Sedlak of the Portfolio club.

There is an outside possibility of starting a programmers and/or MIDI section in these pages but this is as yet undecided. I will judge whether or not to do this based on the kind of response I have. I do not want to repeat any of the good work done in these fields however by other Web page writers such as Christer Gustavsson (Where is the response for these pages?)

More support is needed for the questions and answers pages, although initially successfull people just stopped posting their questions. Although the odd one is still coming and answers are still forthcoming. Please support this, it is of benefit to anyone who uses it.

The Jaguar section should have a lot more news, pictures and reviews in the future. I have tracked down a fair bit of news and am in contact with a few companies now and hope to get news from them on there products.

Both the ST and Falcon sections should contain much more news in the future, along with more of the best PD/Shareware, and PD/Shareware reviews. I should have several demos hopefully in the near future for games coming out on these formats.

The Lynx section is to continue to get reviews and I will update the news as and when I get it. Sorry about the lack of updates recently, more to come.

Expect more links to Atari related pages in the future. There will be more newsletters, documents, and updates to the FAQ's.

Expect further reviews from Andy and Frank, along with myself (watch out for the Speed of Light review). Hopefully I can include more screenshots, and do a few program tutorials. Nick Peers of ST Format and Holger Kipp have offered to support these pages with contributions in the future.

Please write with your ideas, critisms, comments, submissions (software, news, reviews, questions, etc), to me and don't forget that I am now the official maintainer of the Atari FTP list originally by Hallvard Tangeraas. All updates to this list should now be sent to me.

Thank you and see you with the updates to these pages next month!

>
>Yes it looks like you would have to Rob a Bank to pay for them.
>the current C-Labs model is way way over priced at $3000us in fact
>AEO stated that is was some $1200us over priced...

Mr. (or is it Ms.?) SheepHeart:
The price of C-lab Falcon is 3000 DM, that means German Marks.
1 German mark is about 0.55 dollars. Some countries charge more,
but in today's world you can buy where-ever it's cheapest.
Digital Village sells C-lab Falcon mkII + CAF + FDI for 2000
english pounds.

That is an OK price for 16 -track digital audio/midi -system with
500Mb SCSI drive.

Best Regards,

> Can anyone help me?
>

This problem is usually caused because you haven't masked out the
background. If you just put the sprite on screen you'll get a big black
box around it. However if you just OR or XOR your sprite onto the screen
data you'll just fuck up the colors of the sprite.

So you cut a hole out of the background, that is the same shape as your
sprite, then you can OR your sprite onto the hole and bob's your relative.
How do you cut out the hole you ask, well you can either make the mask by
generatorating it from sprite data (OR the four bitplanes together and
NOT it) or you can draw it yourself in an art package in colour 15 (

this uses more memory, but you can put an outline around your sprite and add cheesy dithered shadows.

When you've got your sprite data, you then AND this with the screen and the OR your sprite data with the screen.

I would suggest that you store the background in a chunk of memory reserved from the OS using malloc, and then blit it onto the screen rather than using strings. Don't know about GFA but some Basics will shift the strings about during house cleaning operations, which will cause a major delay, usually at some point where you want it to run as fast as possible.

Neal G. Gilbertson (nggilber@cca.rockwell.com) wrote:

: The Amiga has the *best* OS and it is the *Only* home computer
: that will do true multitasking. I know. I have one.

Take a look at Windows 95 - true fully pre-emptive Multitasking on-par with the Amiga. Given the sheer amount of software for the PC market I know which I'd invest in. Oh and yes I have used W95, this isn't press release talk. Our University is a beta-test site for it (one of many I expect).

: A Terminal program,
: DiskMaster II (Dir management prog)
: Final Copy II (fine Word processor)
: Power Snap
: Quite often a DataBase program.

Although certainly not multi-tasking I can be running Stalker to be on-line, have the Freedom acc to do the file handling stuff (and yes it works WHILE downloading), have a database/address book on-line (readable while doing other stuff) and still throw a soundtracker module through the DSP and have room for my Tetris game as well. Agreed they don't multi-task so to speak but quite frankly if I can do all the things I need to at once, does it matter HOW the computer does it?

: The Amiga lives and will soon be in production once again.
: A new Power-PC based Amiga is the next-gen to come.

A RISC based Amiga would be interesting. It could also be the one machine that in a way kills off the Amiga market - how? Well put it like this. You have a box on your desk that can run all PC and most compliant Amiga applications (because lets face it, lots of games/demos are not going to work due to 'unofficial' hardware coding tricks needed to get the best out of the machine). This means you can effectively purchase either PC or Amiga software. Given the current range of PC software on comparison which are you more likely to buy? Imagine 3.0 on the PC is amazing, as is Lightwave. Would you buy an Amiga WP package or something a little more 'industry' standard like Word 6.0 ? Games like Subwar 2020 on the PC is much more superior to the Amiga version, so I guess if sense prevailed you'd buy the PC version instead because of better graphics (and who knows, maybe even better sound - maybe).

The end result is that you buy more PC software than Amiga software, why would a company bother producing two versions (one Amiga, one PC) when most RISC-Amiga-PC-compatible owners will buy the PC version anyway?

This is providing they do actually make a RISC based Amiga of course, the incompatibility problems would be incredible, sure some might say lets have a PC with Amiga hardware inside it - but why? Nothing on earth would use it.

: Amiga has it's roots in Atari. Atari could have had Amiga (around 1984)
: but didn't take it up. They invested money into it's development
: but blew the chance to own it and they realy did want to.
: Too bad for them. %:^)

In a way. Atari had a very nice run of success with the ST, they made millions from it, they were also first and it wasn't until the later years that Amiga overtook, it has been only recently that Atari developers are dropping away (ie about a year back) but the ST has still had a superb lifespan by most comparisons, Atari didn't do so bad. When it was out they marketted it well, they just didn't plan on making the machine 'future-proof'. Amiga are still around because of the user base they built up during this time also but development on the Amiga doesn't come close to the PC and with dropping prices it really isn't going to be long before PC's do truly dominate the market.

What everyone seems to forget is that owning an Atari or an Amiga is something special because they ARE different. Its like being a member of an elite club, you know what your machine can do and you know whats happeneing with it. There is a strange but special kind of bonding between the members of the Atari and Amiga community because although traditiional enemies - anything is better than PC domination. Atari and Amiga owners actually DO things with their computers, there must be millions and millions of PC owners who have these thousand pound machines (and the rest) but do nothing but consume. They take in the CD-Rom's, they play the games, fiddle with the occasional Windows App. But how many of them bother to get down and get dirty, coding their machine? Learning to design graphics, writing music, heck even editing a disk magazine? Answer: Not many. Why own a machine for the sake of owning it? Why not own something you know you can use and get enjoyment from.

: I like my Atari and I like my Amiga. I have owned a PC, I have owned
: a Mac. I didn't keep them. I'll keep my Atari and I'll keep my Amiga.

I own a Falcon, an A500 and a laptop PC. The laptop stays because it means I can write reviews of software while the software is running on my Falcon and I can also sit in bed and surf the 'net :) The Falcon stays because I find the graphics potential of it amazing (and I draw commercial graphics so I need it) and the Amiga I will upgrade to a A1200 because of the games and the whole Amiga 'scene'. To fall in-line with the rest of the 'normal' computing world I'd need to go and spend a few grand on a Pentium of some configuration. I'd rather not.

RiCH

PS - Its all mind-food really, you on, gorge yourself. I don't want flames they serve no purpose, follow this up if you have something valid to say please.

Martin Griffiths (mdg@ukc.ac.uk) wrote:
: "VGA's just can't hack it" - this is rubbish, there is no good reason apart
: from coder laziness why demos shouldn't work on VGA - I should know I've been
: very lazy myself in the past!

: Don't give me any excuses like 'oh its 60hz' etc, the Falcon video hardware
: can easily be made to run at 50hz on a VGA and 99.9% of monitors would have
: no problems with this. The only other excuse is the 10% loss of memory
:bandwidth with VGA which means you get 10 less dots on the demoscreen ;-)

Then tell me this :- Why don't the top demo crews like Lazer and EKO
make their demos work on a VGA? Indeed you are supposed to be a member
of Digital Chaos - their first demo also did not work on a VGA - are you
all lazy coders? I don't think so. Why does Pinball Dreams only work on
an RGB and not a VGA? How about Obsession.. same there too. Don't you
think they are made RGB only because of the fact that there are a lot of
VGA monitors that couldn't handle it? If a demo/game wanted to display a
true colour picture in 640x480 it wouldn't be able to on a VGA - if it
could then why can't you have those dimensions from the Desktop???

I know you have a very nice and powerful monitor, I only have a very
basic VGA (note the lack of 'S' infront of that) and an RGB. I'm sure
there are some monitors that could perform, but I know there are lots
that couldn't.

RiCH 'confused'

4169. Free ticket to Spotlight Show

Newsgroup: comp.sys.atari.st
Date: 1995-06-07 00:00:00 UTC
From: cm3hirjd@bs47c.staffs.ac.uk
Message-ID: <3r48b6$6bc@bs33n.staffs.ac.uk>
Source record: 164194

Gasteiner kindly sent me a free ticket to the Spotlight Show this weekend. It looks like being a very nice show indeed, but I have exams this and next week so won't be able to make it. However if anyone would like the ticket I can post it off to you (UK only of course!). The show is THIS weekend 10th-12th. Call me with your address if you are interested, seems a shame to let it go to waste:- (01785) 663383 (After 8pm please).

: for Falc)...
: thanx

Dextrous I believe isn't available yet (even in demo form).
Thought! however is, ST Format had it on a cover disk a fair few months
back (the demo version) so I guess that means lots of FTP sites should
carry it. Have a look-see.

4177. Falcon upgrade help

Newsgroup: comp.sys.atari.st
Date: 1995-06-07 00:00:00 UTC
From: pe@cam-orl.co.uk
Message-ID: <3r4i57$chm@lyra.csx.cam.ac.uk>
Source record: 164202

Last week I posted (will I think I did) some questions about
upgrades for the Falcon (TT-Ram and Power Up2).

Since I didn't have chance to check the news groups till this
week I may have missed any replies.

If you did post something I can only appologise for missing
it and would you be kind enough to email me at the address
below (NOT the 'cam-orl' address in the header).

Otherwise could I repeat the questions :

Is there a simple, cheap, TT-Ram board for Falcon?
Who sells (in UK preferably)?
How much?
Will it fit in existing case?
Number of SIMMS slots?

Power Up2 (32Mhz processor upgrade)
What form does it take?
Is it worth it?
Will it effect any future upgrade?

Email me at rjelwell@pine.shu.ac.uk

Thanks.

Rich.

>basic VGA (note the lack of 'S' infront of that) and an RGB. I'm sure
>there are some monitors that could perform, but I know there are lots
>that couldn't.

1. Yes, 'Tat' (who coded the first 'Digital Chaos' Demo, was too lazy to
do a VGA version.
2. I had a 3 hour phone session with the programmer of the Falcon conversion
of pinball dreams and talked him through the code changes to make Pinball
Dreams run on VGAs - this included me working out the hardware register
values for the VIDEL screen modes etc.
3. Obsession (at least the demo did) on my VGA.
4. As far as 'Lazer' and 'EKO' are concerned, it would not take more than a
day or two's coding to do VGA versions of their demo - as for stuff about
TRUE Colour pictures, you could even skip the pictures or have a 256 colour
version - if this was done properly with a 2pass colour quantization
algorithm the difference in quality would be 0.1%.
5. I would suspect that you are in the minority having a 'VGA' monitor.
6. The DSP based MPEG player that I wrote supports VGA more fully than it does
RGB because my opinion is that most Falcon owners use the machine on a
(S)VGA monitor, certainly out of about 150 registered users only about 10%
are running on RGB.
7. I haven't seen any new Falcon demos in the last few months simply because
it is quite a lot of hassle to get a TV to my machine - I'll probably
download a few soon and have a 'demo afternoon' in front of the TV ;-).

Yup.

> Redesign the casing, the Atari casing is hideous, and seems to
> me to be designed to bring on premature RSI.

I find it useful - I've got a Spirit Folio mixer with the bottom edge resting
in the groove above the f-keys, raking away at about 60 degrees. Very handy.

> Make the casing black

Noooooooooo. Spinal Tap, anyone?

> Remove cartridge port/TV ariel port to save costs.
> Remove SCSI-II interface to cut costs, IDE only.

OK - can the TV port but keep the cart. port (essential for Cubase, Logic
et al.) Ditto w/ SCSI and IDE - IDE drives are only slightly cheaper
than SCSI and the ability to put a decent amount of hardware (hard drives,
removable drives, CD-ROMs, scanners, samplers etc) onto SCSI makes it *far*
more useful.

> SIMMS instead of the stupid Atari system. Typical Atari,
> puts SIMMS in the STE, everyone loves them, then reverts
> to its own system for the Falcon. System should be able
> to support 2,4,8 and 14 meg configurations.

Yup.

> 32KHz 030.

And keep the main board running at 16MHz w/ cache? Or upgrade the whole
thing?

> 299 UKPS

Yup.

: But AES 4.1 is not available to the public! But MagiC!3.

At least, nobody admits it is... I strongly feel that AES 4.1 should become freely available, and (even more important) its sources should be available for further developement. If Atari itself won't do anything with 4.1, they have nothing to lose.

Unless... C-Lab has some plans with 4.1 ? I wouldn't be surprised to find a new version of MTOS in future C-Lab Falcons =-) !

Still, I believe that most people will find AES 4.1 beta, if they just want to.. It might not be legal - but I wouldn't call people who get that beta version somehow, criminals or ultimate sinners. It's a good MTOS - and much better than the original MultiTOS.

<3pr0fv$f15@rebecca.albany.edu> <3pstkt$iq9@ftp.amcc.com>
Distribution:

Ok, I don't know how I did it, but I know how I did it, but I managed
to program a fighting game (like SF or MK) using GFA Basic 3.07. I'm
planning to use other optimization techniques on the program later, but for
now I have a problem:

1)My background is stored in a string like h$.
2) The characters are also stored in strings, dude$
3) I use a page flipping techique.

Whenever the characters are drawn over the background, I use the
PUT x,y,dude$,[mode] command.

The problem is that I've tried all the modes and I still cannot
achieve transparency while keeping the source pattern unchanged. The closest
I was able to come was using mode 7, which gave me transparency, but the
background under the character showed through.
In other words, while I didn't have a big black square around my
fighters, the fighters themselves had weird colors (I suppose from combining
with the background).
Can anyone help me?

This is my first game-type program using GFA. The game so far runs
at a moderate speed, and I'm sure I could speed it up once I learn more about
the language and techniques, but I can't get past this problem.

-Thanks in advance,

Dan.

P.s. Well, maybe I should go over to C or assembler, which I'm sure some
of you would suggest, but I'm still trying to figure out Basic!

4188. TRADE: Printer(s) for CD-ROM Drive [U.S.]

Newsgroup: comp.sys.atari.st
Date: 1995-06-07 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <hA5-lYu.lmcclure@delphi.com>
Source record: 164213

Now that I have a laser printer in the house, my three dot matrix
printers are sitting idle, so it is time to trade them for something
I will use.

That something I am looking for is a SCSI CD-ROM drive. An external unit
is preferred, and single speed drives will be considered. The main
criteria is that they work with an ICD AdSCSI+ host adapter on an STe,
and hopefully with the SCSI controller on my Amiga as well.

Here is what I am offering in trade:

```
Printer Model Approx. Cash Value
--------------- --------------------
Panasonic 1091i $75
Star NX-1000 Rainbow (color) $80
Citizen GSX-140 (w/ color kit) $175
```

Most of you are likely familiar with the Panasonic and Star models
mentioned. The Citizen is a very nice 24-pin printer, with loads of
features. If I were going to keep any of these printers, it would
definitely be this one.

All these printers are in very good condition, and include original
manuals and boxes (although the Star is missing the styrofoam packing
blocks for some reason).

Unless someone offers me something like a Toshiba quad-speed external
for all three printers, I will be offering the ones that don't get
traded off at a later time for other goods.

Of course, I will always accept cash.

```

Hi, my friend and I are just about to mount a TT and a Falcon in PC
tower cases.

If any one has done the same thing or has any similar expereinces I
would be grateful for details or tips to make the whole job go smoothly!!!

Thanks in advance!!!

> version huh? :-(

The Falcon-Version will come After the Amiga and the PC-Version so that they
can make the Falcon-Version teh best! :) unfourtunally we will have to wait
longer for it too :(

Watch out with buying portfolio's or other stuff from ACN! They
sometimes don't give you the right things. Especially with the
portfolio's!
I could well be they send you one with a German or French keyboard
instead an English one.

Greetings,

Frits.

From the Holy Book of <3r0062$ohh@fitzherbert.pavilion.co.uk>
as spake by keiths@pavilion.co.uk (Keith Sunderland) :

>If he wants Sozobon then get the Heat and Serve version. It is easier
>to set up than the old and has a few improvements in it. [...]

Ack! No, please _don't_ get the Heat `n Serve version; it hasn't been
updated in several years, it has a pile of known bugs, and it doesn't
support external symbols longer than 7 characters.

If you want Sozobon, get SozobonX. It has an updated GEMfast library,
it does IEEE floating point, and most importantly, the maintainer is
still around. You can get SozobonX at:

ftp.fu-berlin.de:/pub/atari/programming/sozobon

You don't state the Host Adapter thatyou are using or the Host software,
Conner are a problem drive, Atari users would not reccomend them...

You can fit a Internal HD in the Megs ST range, it has all the connections,
I use a 240 meg Quantum in ime using ICD software with a ICD Micro host
adapter...

To me this is the ONLY was to go with these machines....

```
: I agree fully in your statements. BUT AES 4.1 STILL needs some serious
: optimations here and there. The features are good indeed, but it's
: just too slow.
: Some decent disk-/file handling routines would also be desirable,
: MultiTOS can't copy disk in the background without blocking the other
: tasks.
```

AES 4.1 probably could still be accelerated - but the basic Falcon technology (16 Mhz 68030) sets some limitations to that. MTOS has been written with C, and it won't be easy to make a pre-emptive multitasking OS to run much faster than MiNT/AES 4.1 does without using assembler. And that would bring its own problems.. Just compare AES 4.1 to 68040 Macs with System 7 - or some PCs with 486 and Windows. It's a miracle what we can get out from a humble 68030-16 and 4 megs of RAM =-) !

MTOS, btw, can copy disks as a background task - but one has to install a new copier program to replace MTOS's own routines. Haven's tried it much, but is't supposed to work.

Greetings,
TH

> In other words, while I didn't have a big black square around my
>fighters, the fighters themselves had weird colors (I suppose from combining
>with the background).
> Can anyone help me?

I haven't really used GFA, but it sounds like you haven`t got a mask. What you want is another copy of the sprite, where anthing that should be transparent is all 1's (ie colour 15, I guess...) and the rest should be 0's (colour 0). put this in a string in the way that you are with the main sprite (dude_mask)

Combine this mask with the background with a logical AND (ie put x,y,dude_mask,[md]). This should leave the background intact, but where the sprite should be, a blank piece of screen... Then put the sprite itself in, using an OR (sounds like mode 7).

Hope this helps...

4219. SLM804 Printer Circuit Diagram

Newsgroup: comp.sys.atari.st
Date: 1995-06-07 00:00:00 UTC
From: Dennis McGuire <mcguired@moose.erie.net>
Message-ID: <Pine.LNX.3.91.950607231054.2966B-100000@moose.erie.net>
Source record: 164244

Our user group has an Atari SLM804 laser printer which has quit working. It was helped along by a non-electronics friendly user who decided that blowing fuses can be cured by using a higher amperage fuse!

Anyway, the internal fuse had been blowing. Now there are a couple of fried components that I need to replace. They are marked as follows on the circuit board: Q103, R113, C115, C116, C117 and C111. They appear to be power supply type components (C111 and C117 are electrolytic capacitors). If anyone has cicuit diagrams or other means of identifying these components, I would greatly appreciate the information!

Advice from anyone who has repaired SLM804's is also welcome!

4220. Star NX2420 Printer

Source record: 164245

I'm trying to help a friend get his new Star 2420 Rainbow printer
working with a 1040 ST. It is supposed to be comaptible with an Epson
LQ-860, but the standard LQ driver for Pagestream results in some skipped
lines in the printout. The GEM screen dump shows similar results. Does
the Star NX2420 require a custom printer driver?

>Basically they'll have to either try and fiddle 2 or 4 meg in for this
>price.

Well, now we have a harddisk war going, maybe the next thing is a RAM war... I surely hope so. I think RAM prizes are just way off. Compare the prize of one stupid SIMM (4 Mb only 3 chips, a 2-layer PCB of just a few sq.cm.) against the price of a complete motherboard (lots of sq.cm. multilayer and highly integrated custom chips, PC thats is..) and you'll notice it's about the same.... Someone is definetely making huge profits there...

Let's hope for the best and maybe C-lab will produce a usable (=fast) Atari compatible machine for a fair price.

4226. Gemulator 4.0 now available from dealers

Newsgroup: comp.sys.atari.st
Date: 1995-06-08 00:00:00 UTC
From: brasoft@coho.halcyon.com
Message-ID: <3r7es5$c18@news1.halcyon.com>
Source record: 164053

Although it is not scheduled to ship until June 30, we are now making the Gemulator 4.0 Atari ST/STE Emulator for Windows available in beta form. Various Atari dealers across the U.S., Canada, and England, will begin shipping the Gemulator 4.0 cards, TOS 2.06 ROMs, and the beta software early next week. We are doing this to get as much testing as possible of Gemulator 4.0 on all the various different operating systems that it runs on (Windows 3.1, Windows For Workgroups, OS/2 Warp, Windows 95 beta 3, current Windows 95 betas, etc).

If you have already received one of our 6 page Gemulator 4.0 flyers in the mail, most of the dealers listed in the flyer will be making the beta available, including Toad, B & C, ATY, 16/32, System Solutions, FaST Club, Scarborough Computers, and others. You can browse a list of dealers on our web page.

If you've been considering getting Gemulator, now is the perfect time to get the hardware and TOS ROMs in place, as the beta is available at a discounted price compared to the full price that kicks in on June 30.

If you currently own Gemulator 3.0 and are interested in trying the beta to let us know if it has any problems booting on your system, you can download the current beta directly from our web page or ftp it.

If you want to see what Gemulator 4.0 looks like running on Windows 3.1 and Windows 95, you can download screen dumps from our web page or see them in the 6 page flyer.

To access the Branch Always web page, the URL is http://www.halcyon.com/brasoft/ and the ftp site is ftp.halcyon.com/pub/local/brasoft.

To order the flyer by snail mail, write or email your address to us.

|> Acorn machines? Linux or SCO on PCs? Solaris, BSD Unix or whatever on

I agree on that one. I think Acorn should have a shufty at the application bar along the bottom of the screen under Win95, and consider a look & feel suite against Microsoft for it (RiscOS has had the same thing for years).

|> Personally, W95 hasn't impressed me at all - horses for courses, maybe?

Also, MS is being very sly with Win95 as far as HCI is concerned. A small change, but significant is moving the closer to the top right of the window, when everyone else in the the world has it on the top left. Madness? Irrelevant? Nope, the idea is that loads of folks will use Win95, 'coz it's windows. Then they'll get used to the top-right closer, and when they come to use a mac, an acorn, an atari - even a dogs bollocks Motif driven HP700 workstation, they'll get confused and think 'this is rubbish, the widgets are wrong'. Then go back to their MS where they feel safe.

I kid you not.....this is really what they are doing, and why.

|> Mind you, let's see how the PC card for the RISC PC affects ARM-native
|> software sales. Given that Acorn software is cheaper, smaller, faster and
|> (often) more robust, it could be interesting.

That card is cunning - run windows apps at the same time as RiscOS ones, on the same screen, so you can use RiscOS & windows simulataneously (both can have windows on screen at the same time and share memory, IO and video).

|> a Jag, a M2-based 3DO, a Playstation or a Saturn (at UKP150-300) and keep
|> your conputer platform of choice.

I'll have that saturn - it's great. PC's just aren't suited to games 'coz of the limitations of their architecture.

|> is (I hope) common knowledge that the P6 will be the last generation of
|> Intel processors to be even vaguely rooted in the 8086 architecture. P7
|> will almost certainly be based around VLIW architecture which Intel are
|> developing with HP. Like the PowerPC, all current PC apps will have to
|> run under software/firmware emulation.

The x86 architecture has been flogging a dead horse for a longtime now, it's cost vs performance just cann't compete with the likes of ARM, PPC, DEC ALPHA and MIPS, who can give 4 times the performance for 1/10 the cost. (Ok, maybe not the Alpha - but that chip runs Windows so much faster than an Intel chip it's scary).

|> Hobbyist programming is dying. Discuss.

Yes, I think it is, and it's a shame. But that said, there is something
appealing to the few remaining hobbyists about keeping to a small scene.
If you're only really doing it for fun, not for the money, then no one
will notice in the PC world, where shareware houses have big K turnovers.
Your efforts tend to be better recieved on a smaller scene like the Atari,
and if you write a quite good program, likely you'll get a mailbox full
of 'good going' letters, and a magazine write-up.

Craig.
(Who has no reason to leave the atari, it's just about to get interesting).

|> >as well as accessing Kobold to do the transfer for you.
|>
|> Er, no, it's not as simple as that (see my earlier post)

It is as simple as that, and it works ok. The lack of interupt IO is
not MultiTOS's fault, thats a problem with MiNT. And if the MiNTies
ever sort it out (add to pending queue, item 1004), then the hooks
are still there so that multiTOS will use it.

[Add also to that queue VM, shared libs, a chroot() that actually works,
and a few other items as well]

Craig.

So, I take it that you were actually running TurboC on the Falcon Speed? The reason that I ask is that I could not get Turbo C++3.0 for Dos to run on my Falconspeed and ended up selling it. I tried version 5 and 6 of Falcon Speed, but both made the keyboard repeat letters-like this:" rrrrreeepeaattttt" when running TC3.0. Most annoying. BTW-I was using Dos 5.0.

>
>RiCH

The Falcon version will be released at the same time as the A1200 version.
It will feature exactly the same extra table, this will be in the
late summer (Septemberish)

The project was put on hold for Substation and the Amiga 500 version of
Obsession. New tables and a maze pack for these products (STE versions)
will be coming out sometime shortly.

Just before any more rumurs start, Obsession will also be arriving on the
Acorn and PC in the New Year, so if you want them to keep programming for
the STE AND Falcon then I suggest we support them.

If you don't know what an Atari personal computer system is
don't bother to read this. However, if you've always wanted
to own one of the top machines in the ST line, read on. I'm
(reluctantly) selling my Mega ST2 which has TOS 1.2 and a
new 120 meg internal hard drive. The package includes a fresh
SC1224 colour monitor, an Atari coloured (gray) 1200 baud
modem and a throw-in Atari 9 pin printer to get you started.

The hard drive has many of the best ST software packages pre-
installed including Caligrapher, Atariworks, LDW Power,
WARP 9, SpeedoGDOS, as well as many popular games, etc.
Still as fun and easy to use as ever. Complete system for $475.

Minimum of 4 as far as I am concerned. By the time NVDI and other bits are loaded and you're running 640*460*256 there wouldn't be too much left of 2 Meg

>
> Redesign the casing, the Atari casing is hideous, and seems to me to

Agreed

> Make the casing black

Why ?

> Remove cartridge port/TV ariel port to save costs. Remove SCSI-II
> interface to cut costs, IDE only.

Cartridge - no, should be kept
TV - doesn't cost much for a modulator
SCSI-II out, IDE only. - the problem is you can get >3 Gig SCSI-II drives which is what you need for D2D recording. Not only that but I don't see why I should scrap my SCSI devices.

> SIMMS instead of the stupid Atari system. Typical Atari, puts SIMMS
> in the STE, everyone loves them, then reverts to its own system for

>ME TOO. Really, I need to know WHAT I can plug into the hard drive port.

You can plug in any device wich was designed for the ACSI-port.

E.g.: Atari Laserprinter, Atari Harddisk, SCSI-Hostadaptors to connect
SCSI-harddisks etc.

>I also need to know what flavor of SIMMS I need to upgrade from 1 to 2 megs
>on this 1040 STe.

You need 2 SIMMs - 1Meg, 8Bit or 1Meg, 9Bit with 120ns or faster.
But you have to put in 2 SIMMs of the same flavour! (mixing 8Bit/9Bit
or 9-chip/3-chip etc is not possible - one bank (2 SIMMs) has to be
equipped with the same type)

Good luck.

R> All good demos are. VGA's just can't hack it.

Although this is, to some extent, true, it's a shame that the majority of Falcon owners are precluded from seeing these and demos and an even greater that they can't show them to their non-Falcon owning friends. If they could, maybe we'd get just that many more Falcon users. I find that less than 10% of my customers are using RGB monitors with their Falcons. I'm not a programmer myself, but somehow I think that it should be possible to write some very impressive demos for SVGA in 256 colours or even in the relatively low TC resolution.

yes, that is a known problem. There is a fix called "falcon clock patch"
which requires soldering inside your falcon. There are a variety of patches
available. I have one installed inside my own falcon. Do you know the
board revision of yours?

Greetings,
Thomas

There is still room to improve the keyboard and to move the 9 pin joystick
ports onto the side of the casing, perhaps with a serial mouse socket so
you can use PC mice to...

In that area something which definately deserves to die is the Atari
mouse, and die painfully it should to...

>
>> 32KHz 030.
>
>And keep the main board running at 16MHz w/ cache? Or upgrade the whole
>thing?
>

To upgrade the main board something has to be done about the blitter,
apparently you can't clock it above 20Khz, and with faster processors
you end up with the situation that the processor outperforms the blitter
on every fuction rendering it useless, Im surprised that the Falcon blitter
isn't better than it is, should be relatively simple chip to design?

If C-lab start selling Falcons with graphics cards people are going to
be paying for 2 graphics subsystems one of which needs a major overhaul.

Do take up this offer, you'll find it much easier and faster. Also it is very useful to have a couple of weeks messages on your hard disc instead of just that days worth as with QWK etc.

>Does anyone know what I should be looking for ? Is there any shareware
>stuff like this out there ?

It's all shareware or freeware.

AFAIK there isn't actually any easy, but inflexible, integrated point software like you get for the PC. You can however set up a point system using software like that used on a BBS. You need three programs, a mailer, which dials your feed and exchanges compressed packets, a mail processor (or tosser) which packs and unpacks mail packets etc, and a reader.

The best mailer is a shareware program called Semper. It has a nice GEM interface and is frequently updated. There is also the text based Binkleyterm which is freeware. Some people seem to prefer it, I don't know why.

Jetmail is undoubtedly the best mail tosser, but as fairly expensive shareware may be overkill for a point system - IOSmail is freeware, has all features a point would need (but not some useful for BBSs) but is rather slower.

LED is the only mail reader I know of, although Martin Maisey was thinking of writing one. Fortunately it's very good.

All of these should be available from any atari BBS as the sysop probably uses them himself. When I set up as a point my sysop sent me a floppy with it all on and configured for my system (but with Simon Gornall's password in instead of my own!)

High,

some time ago I bought an MegaSTE from a friend. He gave
a SM804? laser printer together with the MegaSTE to me.
The printer has some utility called Diablo-Emulator.
Unfortunately I do not know how this Emulator works.
So I cant't manage to write a printer configuration file
for my WordPlus. Any hints about the Emulator or where to
get documentation about it are welcome.

Thanks for your help,

Jan Lichtermann

Converting to assembler wouldn't have that much effect.

> And that would bring its own problems.. Just compare AES 4.1 to 68040 Macs
>with System 7 - or some PCs with 486 and Windows.

Just because Windows is worse doesn't mean AES 4.1 can't be significantly accelerated.

>MTOS, btw, can copy disks as a background task - but one has to install a
>new copier program to replace MTOS's own routines. Haven's tried it
>much, but is't supposed to work.

Copying discs like that is just the fault of the desktop and can as you say be replaced easily. But there is a more serious problem here - that the low level disc routines in the bios go into supervisor mode and busy wait for the disc to be ready. During this time no other task can do anything (for very good reasons MiNT doesn't preempt supervisor mode tasks). That won't be fixed until good interrupt driven drivers are produced. HDdriver can be used in an interrupt driven way if the operating system directly supports it. A driver for MiNT to use that may not be that difficult to implement; MagiC 3 already supports it apparently.

Righty, I've come to rely upon you lot of ppl when it concerns me being totally poo at games, so I'd like some help with the first level of the Payoff (The Cadaver expansion disk - based after the original game).
I am stuck. To put it shortly. This is how far I can get... I have used all three other diaries to gain access to other rooms, and have done the "Drink the six" drinking game. I have even used the loadstone to get the bomb and stuff in the room with the magnetic force-field. And I have used the bomb to blow up the barrel, thus gaining the key and access to the potion store and some long pipey things.
Then I am stuck, I can just get past the nasty spinning blade things, but by a VERY roundabout method which cannot possibly be the correct one, and I am confused by the little caskets. Should I open the RED one, or keep the "Open Chest" scroll for later? Help!

Graham - Bloody hell, stuck on level 1 with 199 to go...

It's still a lot faster than AES4.0 (which was, in my opinion unusable).
Also, it's actually very compatible (runs Lattice C 5.52 better than
TOS4.02 does - no problems with cascaded menu's not working).

|> Some decent disk-/file handling routines would also be desirable,
|> MultiTOS can't copy disk in the background without blocking the other

Hmmm. You just have to set the DESKCPY envirment variable to point
to a copy program, and MultiTOS's desktop will do it for you. I use
Thing as a desktop under multiTOS anyway, and that also has that feature,
as well as accessing Kobold to do the transfer for you.

Craig.

Kobold for Minix partitions? Now that would be fast (Minix partitions
are typically 4x faster than TOS partitions anyway).

|> : very lazy myself in the past!

The only real problem with supporting VGA is the bandwidth that you lose to
the video hardware. So things go slower, or you lose a few FPS when you
update. It's not crippling....

|> Then tell me this :- Why don't the top demo crews like Lazer and EKO
|> make their demos work on a VGA? Indeed you are supposed to be a member
|> of Digital Chaos - their first demo also did not work on a VGA - are you

??????

|> an RGB and not a VGA? How about Obsession.. same there too. Don't you

Bad example, Obsession (as with the follow-up Substation) work fine on
VGA monitors (well, SVGA).

|> think they are made RGB only because of the fact that there are a lot of
|> VGA monitors that couldn't handle it? If a demo/game wanted to display a
|> true colour picture in 640x480 it wouldn't be able to on a VGA - if it
|> could then why can't you have those dimensions from the Desktop???

Ok, it couldn't. But then, if you displayed a 640*480 TC image, then you've
maxed out the memory bandwidth just to keep the image on the screen, so
there's bugger all you can do with it beyond 'oh that image looks pretty'.

Now, if they were real coders they'd be finding ways around this (like
the old overscan and switched mode tricks on the ST - remember GFA Raytrace,
it displays two res' at the same time (ST-Low for the image, ST-Medium down
the RHS border for the menu)).

|> I know you have a very nice and powerful monitor, I only have a very
|> basic VGA (note the lack of 'S' infront of that) and an RGB. I'm sure

Hmmm. Richard, you should have bought an SVGA, I payed 139.00 for mine
brand new, and it works with most stuff (although not all, by any means).

Sounds like one of the very old 8-bit Atari's from the early 80's.
It's not very powerful compared to todays computers. It's properly
not very much worth moneywise.
But I would keep it if I were you - it's a cult machine, like every other
8-bit computer from the 80's. :-)

Keep Cool and Flying...

What you have is an Atari -8- bit computer (as opposed to the 16 and 32 bit computers of today). These were very popular some years ago along with similar computers such as the Commodore 64, Texas Instruments 99/4A, and the Apple II. It's not worth very much, I'm afraid. But for more info, you should post in the comp.sys.atari.8bit newsgroup as that's where all the -current- experts are for this machine hang out. Maybe someone will buy it from you.

I tried emailing this, but it bounced.

Okay, calling into my University's computer and getting on the net
is SO slow because they're running on 7 year old DEC stations *(putrid,
huh?)*. Now I have an account on a commercial internet provider that I
use to run a MUD with. I would LOVE to be able to connect to it directly
rather than call through my school. Unfortunately, the software that is
used to connect is Windows based (when will the world learn?). So if
anyone has any knowlege of GEM based software for this purpose PLEASE let
me know! It took me 30 tries just to get in here today, no exaggeration!
Any response will be greatly appreciated, and if it's a good
response I may even kiss you :)

Thanks! George Garner

The 65xe was a pointless computer IMHO...it was basically an 800xl in a
different case. It was either the predicessor of the 130xe, or came out
after it as a "scaled down" model. It was also used as the base for the
XE game system (an 8 bit Atari with no keyboard, possibly no serial port
either).

Is it powerful? No. Well, for a computer of its time, it is.
Should you keep it? Depends...I just sold my last 800xl. I was keeping it
for sentimental reasons, but finally dusted it off and
sold it.

From: msa@alpha1.bton.ac.uk
Message-ID: <D9v1D1.KKp@bton.ac.uk>
Source record: 164129

My Atari STE has been lately experancing problems with the output to the screen from both the RF and composite (monitor) where after about 10 minutes from a cold boot the colour disappear giving me a black & white picture. If i adjust the tunning on my TV, and then retune can sometime regain the colour but soon disappears. Has anybody experianced this problem and how do i solve it?????
It could be some chip that over heating or something similiar.

Any help would be appreciated.

I still think that some demos may have a point (I stress that it is a minority)
- if you want to do something really on the edge, you may well need all
the clocks you can get to pull it off. But very few of the demos I have seen
on the falcon have made me think 'yeah, they really kicked it there'. Few
have achieved what was done on a plain ST. Hands up all those who went 'wow'
at that demo that had the filled in vector landscape as the menu?

I don't mind having to use an RGB monitor if the coder really did need all
the clocks he could lay his mits on......but it don't happen often.

Craig.

>>ideas? We have utilities to format and partition the hard drive but

>You don't state the Host Adapter thatyou are using or the Host software,
>Conner are a problem drive, Atari users would not reccomend them...

I use a conner drive and I only had problems with it when my old host
adapdtor went scablooie. But as soon as I got Link II it worked fine.

Conner are a problem only because the parity is often permanently enabled
and if the SCSI interface doesn't like that then it won't work. I
couldn't get link I to work with it at all.

You could phone conner and find out if it has parity permanently enabled.

Unfortunately I can't remember their UK number :[

I think I have it written down somewhere and I'll check.

1 Technical Info

My email address will change more than once nexttime. Due to this reason I have an alias, pointing to my actual location - and if it's in the MAUS-Net: G.Castan@physik.uni-stuttgart.de

For easy location of this document at servers and mailboxes, I ask for using the following name(s) and saving the ascii AND TeX versions:
FILENAME = gdosi25 (German version)
FILENAME = gdosi25e (English version)
CR+LF should be used when saving at UNIX-Fileservers too, not just LF.

2 Introduction

I'm writing a program that prints out using GDOS. However, I have a problem because there is often no documention included with printer drivers.

There can also be different drivers with the same filename. What are the differences?

Here I have briefly (Stef: *briefly*?? Well, that's not *that* right anymore <g>) collected my experiences with printer drivers.

This collection doesn't generally explain to coders how to use printer drivers (except to problems not mentioned in literature). And you wont find information about the concept or how to install printer drivers. To get this refer to the list at the end of this FAQ.

What I want to describe here is more information about the several drivers:

o Where are the drivers available?
o How to distinguish them?
o What are the problem with them?
o Which drivers can be used for certain printers?

If anybody has more experience or questions, please write me. I will face the work to update this FAQ.

3 Motivation

With GDOS it took me ~2 hours of coding, to get the screen-output to the printer at maximum quality. And with (almost) no extra work I get output to printers I even don't know.

If anybody wants to write a program with printing options, they can use GDOS and take better care over the main program.

Nobody wants to pay for printer drivers if there's another program that didn't take the coder extra work with such stuff making this program less expensive (and surely better).

The user has - besides the lower price - another advantage. If he uses several programs he need place for the driver and the fonts only one time on the disc.

SpeedoGDOS is available from Atari shops (Atari Competence Center in Germany) now.

The (qualified) feedback to my FAQ has - compared to autumn '92 - raised remarkable. Due to Speedo the interest in GDOS coming from the coders seems to be bigger.

4 Changes

Now (from 2.4) I'll switch back to listing the changes here, not in the table of contents ...
Anyway, a "*" stand for changed chapter and "+/-" for new or removed chapter (I guess you'll know which char stands for what <g>)

* 8.1 The meaning of ''Font`` and ''Face``
Here I've exchanged the example Swiss 721 by Dutch 801. The face ''Swiss 721 Roman`` is displayed as ''Swiss 721`` in font selectors.
* 10.4.2 Type 1 GX fonts
* 10.5.2 TrueType GX fonts (or TrueType 2.0)
* 12 Programs (Twist 3 Office)
* 21 Addresses (Pergamon's address)
+ 13.14 Arkus

One Important thing to note: The dates of the GDOS drivers are in German format, that is: DD.MM.YY! Remember that! (But I guess you alreade noticed that?)

5 Notes to the reader

Notes about problems right in this text weren't as effective as I wanted them to be. So, here are they in one chapter:

5.1 Programs

I only have few of the listed utilities. And I guess I'll never get to know each program put in a BBS or being updated. So you coders out there,

Send me information about your product

It's useful for you and users of your program too: Programs listed in this FAQ may be used by more people and the possibility of further development is higher.

5.2 Printers

A complete list in chapter 11 surely is very useful when looking for the right printer driver (e.g. for exotic printers). But I only got 2 useful mails yet. The way this list actually is, it's quite useless. Will I get more information or do I have to remove this list?

5.3 Bitmap fonts

Recently I got a very detailed description of the GDOS bitmap font format. But this would only be useful for the coders of font editors and converters (an I guess there aren't more than three or so), so I didn't include it here. If YOU think it would be useful here, convince me. (Stef: and me for translating that <g>)

6 VDI drivers

In these tables I have listed distributor, errors and useable fonts.

Drivers for NVDI 3 are listed in 6.8.3 seperately.

6.1 Ink printers with 150, 300 ... dpi

Name	Date	Length	Distributor	Errors	Others		Fonts
					1	2	
HP_LJET	22.02.89	45512	BELA			n.p.	LS

PAINTJET:
80X180: 2-8 colo(u)rs
90x90: 16 colo(u)rs

MT90 is made by Patrick Dubbrow.

Using ink drivers produces a problem with bitmap fonts. Using 300dpi all is ok. But 360dpi fonts are optimised for best efforts with pin printers having thick pins. Using ink printers makes the fonts look much too thin.

Solution: either use 300 [600, 1200 :-)] or exclusively use vector fonts

6.3 9pin drivers

SLM	27.01.92	60036	FontGDOS,I		n		LS, OTL
SLM	28.01.93	61911	SGDOS		n		LS, SPD
SLM	02.07.93	63987	SGDOS 4.2		n		LS, SPD
_SLM_HS____	17.01.94_	_63663_	_ROM_____	___	_n_	_____	LS,_SPD_____

SLM_HS is a SLM driver for the Falcon (when using the Heatseeker interface)

6.7 Screen drivers

The screen is (if VDI functions are used) seen as an output device just like printer, plotter etc. That's why fonts for the screen can be installed in ASSIGN.SYS just like for printers.

Normally this isn't noticed because the drivers are in ROM. But they can be used like printer drivers.

Note: For system fonts only (like the original ones) non proportional fonts with a 8*8 or 8*16 matrix can be used. That's limited by the AES not VDI.

With newer AES (from 4.0?) it's no problem to use fonts of free choice (Variable AE_FONTID and AE_FONTSIZE in GEM.CNF, see [Sche93]). Coders should make sure their programs can take that. (even like scrollbars of free width)

Bitmap fonts not assigned for screen driver 1 are not available for other screen drivers.

6.7.1 LineA

The so-called LineA routines are subprograms of the screen drivers from the ST series, to bee seen undocumented. This is the hardware depending part of these drivers.

The attentive readers will notice this: Exchanging the drivers removes the LineA routines as well. As happened on the TT, for example.

So never use them!

You can still /read/ from the LineA variables, but why bother?

6.7.2 Setscreen & Getscreen

These XBIOS-Functions (mostly Setscreen) should'nt be used.

But what am I talking. For those useing them or those being tortured because someone did it:

The video hardware of 1040STE and Mega STE has an hardware bug. When defining a new physbase with Setscreen (and if it's the same gotten with Getscreen), it may happen that the screen is 'folded'. This happens due to the movement of a register at a special moment, which is only allowed to be moved at special phases of the screen output.

What has to be done?

Users: The programs NVDI and FALT_OFF stop this error. Or give this FAQ to coder.

Coders: Either even don't use Setscreen.
If You use it though: If physbase isn't changed, the value taken with Getscreen may not be used. Use the value -1 than physbase!

6.7.3 NVDI and WARP 9

There are two often used programs exchanging the ROM drivers: NVDI and WARP 9 (earlier QuickST). TurboST was distributed by BELA but isn't updated no more.

If these are used once, one will never want to miss them: the Desktop seems to be terribly slow. I will never want to work without NVDI on my Atari. Others say the same about WARP 9.

NVDI uses strongly optimised drivers for the ST and TT resolutions. Sadly I don't know which drivers are used by WARP 9.

NVDI is available from Behne & Behne and contains not only the drivers but a GDOS and a manual describing exactly all VDI calls.

WARP 9 is available from CodeHead.

Due to this NVDI is spread in Germany and WARP 9 in the US

Unlike NVDI, WARP 9 only speeds up the text output and graphics stay as slow as before. AND the newest version doesn't work with MultiTOS. It Works on the Falcon too, but I don't know if it supports *all* resolutions there. (Like with Screenblaster, BlowUp030 or others) 15 bit and 16 bit screen modes aren't supported by it.

6.8 Other drivers

Name	Date	Length	Distributor	Errors		Others	Fonts
				1	2		
META	11.04.89	5644	I			MF	
META	08.10.88	9325	BELA			MF

MEMORY	27.01.92	58397	FontGDOS		n	LS, OTL	
MEMORY	28.01.93	60265	SGDOS 4.0		n	LS, SPD	
MEMORY	02.07.93	62331	SGDOS 4.2		n	LS,SPD,TT,T1	
CYPRESS					MEMORY		
PSCRIPT	14.10.92	33016	WT				
HPGL	08.07.91	48885	ST458			V 1.4r2	
ZEBRA	07.12.91	45746	WT				
T_OFFICE			wt			98/196dpi	
T_OFFICE			wt			98/196dpi	SPD
IMG-0300			Reschke,wt	n			LS

IMG-0300 can be copied (non commercial). The other IMG-0??? drivers are by SciLab. ZEBRA is for the Zebra Labelprinter.

6.8.1 Memory drivers

A memory driver doesn't do anything else than a screen driver (see [Pru93b/c]). But the output doesn't get to the screen driver, but in another memory to be influenced there.

The usual v_openwk binding doesn't have all parameters needed to open this driver. If not included to the language this binding must be made by yourself. A listing is found at [Pru93c].

The memory driver listed above is only capable of b/w output only and has a logical resolution of 300dpi. The (matrix) drivers tested by me have no problems with fonts installed that are for other other drivers. The memory driver should take screen fonts - due to the 300dpi.

Problem could appear because of the aspect ratio (relation of pixel width to height) - normally not similar to the screen resolution.
Due to this circles can be displayed as ellipses.

With NVDI 2.5 or higher, you can output to offscreen (colour)bitmaps. These work with all VDI calls, and you can copy the resulting bitmap to the screen window.

6.8.2 Plotter drivers

A HPGL driver seems to be distributed with the program DATA. On PD disk ST 458 (German PD series) is one too. If I get more about it I'll include this info here.

6.8.3 NVDI 3 drivers

NVDI 3 has its own driver concept. Only a small quantity of drivers is included, but they're very fast, small and flexible.

The drivers are:

```
_____________________________
|_Treiber______|_Datum____|
| PINPRN.SYS | 19.10.94 |
| PAGEPRN.SYS | 19.10.94 |
| IMG.SYS | 30.10.94 |
| MEMORY.SYS | 18.10.94 |
| META.SYS | 18.10.94 |
|_ATARILS.SYS__|_18.10.94_|
```

Depending to the colo(u)r printing capability of a printer (this can be set in the MAKEPRN.APP), the drivers have to use different offscreen drivers to create the graphics (this can't be found in the manual coming with NVDI 3
[Stef: A manual like for NVDI 2.x is in work]
Gerd: It will be an ascii file for FTP servers and BBS, not a printed one)

The Offscreen drivers are:

```
_____________________________________
|_Treiber_______|_Datum____|Farben__|
| OFF002.NOD | 06.11.94 | 2 |
| OFF004IP.NOD | 06.11.94 | 4 |
| OFF016IP.NOD | 06.11.94 | 16 |
| OFF256IP.NOD | 06.11.94 | 256 |
|_OFF32KFL.NOD__|_06.11.94_|_32768__|
```

The actual NVDI 3.01 can't handle colo(u)r printing though :-(
3.02 will. (Which is soon to be released. More then ...)

The flexibility to create a driver's INF for printers is great. To code a driver for SpeedoGDOS you have to become a developer for SpeedoGDOS.
It isn't that easy ...
With NVDI you only have to enter you printer's codes in MAKEPRN.APP. So you only have to check you printer's manual, not learn or do C coding.

The codes driving the printer are saved in the INF files belonging to each driver. A flaw is that these assignments aren't simply exchangeable.
There's no documentation about the file format and no program to extract or add codes yet. The only way is to exchange the complete INF file.

Another problem not even noted in the manual occurs when assigning pixel fonts in the ASSIGN.SYS. Guess that you have assigned 180dpi fonts to the PINPRN.SYS. It's easy to change the output resolution to 360dpi by the CPX. *Then* the printout will be catastrofugly.

A workaround is to duplicate the driver with another name (close to the first ...) and assign this one to in the ASSIGN.SYS too, but with different fonts.

At last I think those drivers conceptionally are much better compared to the ones coming with SpeedoGDOS 5. No colour printing yet, though.

6.9 What's missing

I don't know drivers using the abilities of the following printers:

o Canon BJC 600 - A colour printer with 4 heads (CMYK) 64 nozzles each.
In the colour mode he's compatible to:
- Canon BJC 800
- Epson LQ 2550/2500
It's resolution is 360x360. I dont's know any GDOS driver supporting the BJC's capabilities directly (or via compatibility mode) when using colours.

7 Errors

Errors in the printers drivers - that I know - are the following:

1 These drivers display Fonts with the attribute 'light'
2 Doesn't work on TT
3 The EXTENDED ENQUIRE FUNCTION (VDI 102, vq_extnd) doesn't give back the parameters as listed in the German 'Profibuch' (Jankowski, Rabich, Reschke - Sybex)
4 Using the attributes 'italic' and 'outlined' the letters of bitmap fonts are cut off on the right side. This error appears independent from other attributes being used.
This error was in the Libraries of the driver sources from Atari and seems to be included in all drivers except to NVDI and SpeedoGDOS.

If theres nothing written about an error I don't know if this error appears or not.

Seems it's no accident, that Xact only uses the attributes 'fat', 'italic'
and 'underlined'. (See [Res92]

Another reason against using 'outlined' is the following:
If You make a driver calculate an outlined font from a normal one it get's
'wider' by two pixels. Due to the reason that a pixel has a width depen-
ding to the resolution (other than a fitted font) a text gets different
widthes in each resolution. But who wants to have different textformat on
different printers? The only way to stop this is letterspacing -
typographic 'bullshit'.

8 Fonts

8.1 The meaning of ''Font`` and ''Face``

First: What's the difference between a fonts and a face?

When calling a font selector there may be Dutch 801, Dutch 801 italic,
Durch 801 Bold and Dutch 801 Bold Italic. These are 4 faces, alltogether
creating a font.

This separation isn't that simple at bitmap fonts, because all attributes are
created from only one file (this can be made with vector fonts too, but it's
quite nonsens In my opinion). That's why I first didn't note that this
attribute creation is buggy in some versions of SpeedoGDOS (see 16.3.3).

Using vector fonts this border isn't that sharp with Multiple Master fonts
(see 10.4.1) and TrueType GX fonts (see 10.5.2) too.

Me I'm not always using this separation of font and face in this FAQ.
Especially in the chapter about font formats. ("Face format" doesn't exist
and it'd sound strange if one says:
''These faces are saved in each font format.``)

8.2 The meaning of ''format`` and ''representation``

''Format`` is used in two ways when talking about fonts, what makes it a
bit confusing.

First it's used e.g. for the TrueType and the Type 1 *format* and second
it's used to differ the Macontosh and the Windows *format* (and others)

To solve this confusion in this FAQ

o We'll use ''format`` to seperate TrueType, Type 1, Speedo ...
o ''Representation`` will be used to seperate the file formats.
This is used for mathematics and physics when groups *look*
different but both can be displayed bijectively upon each
other - even in their structure
(Stef: harggngrl. Sorry, I hope Gerd or Chris will help here.
Chris thought of using ''version`` instead)

Then there's no more confusion about this:
- Macintosh TrueType format in Macintosh representation
- Macintosh TrueType format in Windows representation
- TrueType for Windows format in Macintosh representation

- TrueType for Windows format in Windows representation

(Stef: looks funny <g>)

And it's easier to say that Speedo (from 5.0) and NVDI (from 3.0) need to use the Windows representation of a font, but don't care if the fonts are in Windows or Macintosh format.

9 Bitmap fonts

The fonts used are bitmap fonts in the DR standard format. They have to be saved in Intel format. Motorola format isn't supported by any GDOS. (See [Whe88] and appendix)

GDOS bitmap fonts have their width information defined in both, screen font and printer fonts. Sadly the designers were a bit too zealous and fitted the width of the sreen fonts to make them look very beautiful. They've done a good job, but they're not similar to the printer fonts and don't allow WYSIWYG.

There are many fonts on the Internet only for the screen and maybe useable for one printer. Everybody using these fonts should know that he can't print documents in an acceptable quality via GDOS.

But in the Atari and former BELA package there are included fonts for all printer drivers in this package (the 360*360dpi fonts are missing in the Atari package). If you have a useable program you can print every document with every driver.

10 Vector fonts

Vector fonts don't use pixels, they are created with algorithms - supported by shapes and hints. These algorithms (see METAFONT for a good example) make the fonts copyrighted like normal programs. (See [Walsh] for this)

Here I'll write a bit about vector formats. Why should a pure user try to understand it? Nowaydays you'll just get a cheap Font CD, choose 17 of the most interesting fonts for your first poster an print out the creation.

Problems are: I have one face in different formats. Which one should I take? Sometimes I have problems on screen, when I print out something or only when using a specific size. So what?

(When you have 17 Garamond styles from 17 different distributors it's better to read a magazine about typography or DTP to get help)

10.1 FSMGDOS fonts

The vector fonts with the old FSM-GDOS format by QMS/Imagen Corp. are named with OTL.

These fonts and drivers should'nt be used no more and are listed to only for completion of this FAQ.

10.2 Bitstream Fontware fonts

Just to prevent confusion:
Bitstream uses the Fontware format. This - for example - can't handle hints.

It's got nothing to do with the GDOS font formats listed here.

10.3 Bitstream Speedo fonts

The vector fonts in SpeedoGDOS format are named with SPD.

They are supported by all SpeedoGDOS releases and by NVDI 3.0 or higher.

10.4 Type 1 fonts

Type 1 fonts are available for MacIntosh abd MS-DOS/Windows. They only have differences in the internal representation, not in the information.

At least one of these formats is supported by SpeedoGDOS from V5.0a. But I already found some that SpeedoGDOS 5.0a can't display.

Just a note:
It's wrong thinking PS interpreters could use Type 1 fonts just because Adobe's original PS interpreter does this.
It depends on the producer of the interpreter to decide, which font's format is used. But one thing you can trust:
A PS document looks different on screen and printer (Stef: hehehe, Calamus)

7.3.5 Multiple Master (MM) fonts

ATM 3.01 (Adobe Type Manager) for Windows now is capable of scaling MM fonts. With this technology not only height, size, skew angle and rotation can be set for output, there's one more continuosly parameter. This is to set, what thick a face is to be displayed. This is no simple algorithm - like others at GDOS - but the font designer can make sure where to change a face when it's more or less fat.

This subsection only is FYI. SpeedoGDOS 5.0 only can handle normal Type 1 fonts - and NVDI none.

When taking a look at [Hil95] (about the URW PrintWorks CD), it's visible that
URW has such technology - internally - too. The extremely interesting book [Kar92a] is by URW too.

Q: These MM fonts are an extension to Type 1 fonts, right?

A: Yeah!

Q: So I can use MM fonts with Windows, but what do I do with my old PostScript printer?

A: No matter, he can handle it anyway.

Q: Huh? Which way?

A: It's been noted already that vector fonts are algorithms. Adobe simply defined a new operator.

Q: My old PostScript printer doesn't understand that operator, right?

A: Right. But the definition of this operator can be distributed within the font. That's the way it's actually done.

Q: That's why all PS printers can handle this?

A: Sure. Only the coding interface should have to be fixed. That's why a new ATM is released for Windows.

Q: Great! Then I won't have to get 50 faces for each font.

A: Yeah, and you'll have enough money left for an ice ;-)=

10.4.2 Type 1 GX fonts

These are told to have the same features as TrueType GX fonts (see 10.5.2).

10.5 TrueType fonts

This format is available for MacIntosh and MS-DOS/Windows too.

SpeedoGDOS from V5.0a and NVDI from version 3.0 can handle both, no matter if it's for MacIntosh or MS-DOS/Windows. The MS-DOS format is a superset of the MacIntosh format.

By Apple's definition it's got different tables (like the chunks known from the IFF format). In the table's header a name and a length is noted. This way a program can ignore tables it can't handle. When new types of tables are defined, they have to be announced to Apple. Required and optional Tables are defined by Apple too.

On Macs, .suit is the suffix for TrueType files. The data is found in the resource fork.
(Stef: That's not always right, with System 7 fonts are in the folder Fonts in the System folder. They may be in a suitcase there)

I don't know any official documentation which tables are used or required by SpeedoGDOS 5.0 ff or NVDI 3.0 ff.

10.5.1 TrueType for Windows 3.0

Microsoft used this procedure to announce new tables and make them mandatory for Windows.

The difference between the Apple and Microsoft format simply is that Microsoft declared more tables as mandatory. Plus the fixed order of glyphs when special flags are set. A definition of the Microsoft format is found in [Mic]

10.5.2 TrueType GX fonts (or TrueType 2.0)

Apple expanded the TrueType format for any design axle. So we have a
technology similar to Multiple Master fonts (see 10.4.1).

New Features:

o TT GX fonts may contain Type 1 data
o automatic ligature substitution
o more than one base line (e.g. for mathematic formula)
o track kerning informations (NVDI from 3.02 uses them)

These features are distributed by the Line Layout Manager (LLM) on the Mac
an they are independent from the scaler used. So - at least on a Mac -
these features can be used by all font technologies

Informations are available by the Apple developer support organization
(APDA).
Their EMail address is: adpa@applelink.apple.com
The ''TrueType Book`` describing TrueType 1.0 and the ''QuickDraw GX Font
Formats Book`` (describing the GX extensions) can be ordered there.

TrueType 2.0 has new tables requiring (different to MM fonts) new scalers
to use this technology.

10.5.3 TrueType for Windows NT

Instead of using the GX font's definition Microsoft defined another new
font's format for Windows NT (Stef: When are they about to define
darkness as a standard <g>) A special feature is the double amount of
required characters compared to TrueType 1.0

10.6 Calamus fonts

Can YOU tell me more about these?

10.7 Comparison of vector formats

There's no noncommercial program on any platform that can convert one
format to the other. A lot of fonts are only available in one format.

But what makes a conversion so difficult? To ask different: Which infor-
mations are stored by which way?

10.7.1 Curves

First the shape of the chars should be saved. But that for many ways are
used (see [Kar92a]):
Type 1: Uses cubic Bezier curves aka cubic B-splines
TrueType: Uses square Bezier curves aka square B-splines
Speedo: Uses cubic Bezier curves aka cubic B-splines

For most applications there should be no difference between several font
formats. Therefore SpeedoGDOS transforms TrueType characters into
cubic bezier curves for v_getoutline. I'd like to get (optional) quadratic
bezier curves in this case and v_bez_fill should be able to cope with it.

Square B-splines are much faster than cubic Bezier curves but you have to store about 4 times as much points to achieve the same quality.

10.7.2 Hints, instructions, switches

The next problem is the display on media with low resolution. For a neutral observer Speedo fonts always look quite good on the screen (well, some fonts are ugly by nature).

But I've found TrueType fonts that look as ugly as nothing else on the screen. For example the two vertical lines of an 'n' are not the same, one is 1 pixel and the other is 2 pixels thick.

The way to prevent those errors are hints. Companies use different names for Hints.

o Adobe: Hints
o Apple: Instructions
o URW: Switches

This method is used by Speedo, Type 1 and TrueType (but not by Type 3 and CFN). But hints given by the format don't mean that they're used too! (That's why others got different experiences with these formats than me)

So, finally: All these three font types can look very good on the screen, Type 3 and CFN can't. [ever tried to print CFNs on a printer with less than 360x360dpi?]

Now I've noted, what hints are doing and in which formats they're used. But *how* do they work? Specific parts of a character have a specific >>job<<, like serif, bow etc. This is saved besides the font's outline. This way the scaler e.g. can create similar vertical lines of a >n<. More is found in [Kar92a]

Type 1 only can handle very few different hints compared to other formats. But the new MM technology (see 10.4.1) makes Type 1 much better at some parts.

Note:
with v_getoutline you get the outlines in the workstation's actual resolution. Remember that using hints depend of the resolution. Plans exist to make v_getoutline independent from the actual hint size.

10.7.3 Internal resolution

After the problem with low resolution now there's the problem with the high resolution. Even if you think there shouldn't be any; there are! (See [Kar92b] too)

To display a vector font first an internal system of coordinates has to be selected. To do this the em-square is devided in units. CFN has one from 0 to 16000, Type 1 (which was created when there were no high-res printers) one from 0 to thousand. Due to this there are 'corners' visible at large letters or high resolutions (in the professional league)

Referring to [Kar92a] the internal resolution can be raised by the DIV operator. But this has to be supported by the font editor. (Is this done regularly and does the scaler get remarkably slower by this?

CFN can make the big deal here.

With TrueType, the font designer can choose a resolution up to 16768. Resolutions equal to 2^ are faster than others.

(Which internal resolutions do Speedo, TrueType and OTL have? Is the Bitstream format mentioned in [Kar92a] identical to the Speedo format?)

10.7.4 Linear and optical scaling

Do we now have - with the description of the shape, a high internal resolution and the hints - a scalable font? Sure not!

A font being designed for 16pt has a totally different shape as a doubled 8pt fonts (see Knuth: The METAFONT book; Kopka: LaTeX, [Kar92a] etc.). A well designed font isn't lineary scalable.

In large fonts vertical lines are much thicker than the empty space between them. But this information for optical scaling can be saved in a font too.

So a font, being 20 pixels high on the screen (this is usually a large font) should look different to one being 20 pixels high on a laser printer (this is a small font that should have small vertical lines).

The rest of this subsection was misunderstood by to many people. Anyway I seem to be the only one thinking here's a problem. That may have (at least) three causes:

o I can't make you understand what I think
o I'm a crazy mind
o the problem's too complicated to make anyone even *see* a problem here

Well, let me (Stef: and me) start anew:

Vector formats make it possible for the font designer to decide a face may look different in points or pixels below a specific size. For example it's useful to make a face broader when used with a small size [Kar92a] -independent from the printer's output quality.

So, let's display a small text in a window (e.g. with a size of 8pt). And the font designer made this face look broader at 8pt or smaller.

Another window is used as a magnifier to get a doubled size (Almost any Word processor has this function - Stef: really?)

This doubled view in the magnifier's window *should* be broader like the 8pt text, the WP's coder shouldn't have to take care about that.

But the coder has to use a size of 16pt in the magnifier's window - and now the designer's decision (to make the face look broader from 8pt) is

ignored!

To solve this problem there are two ways:

1. The coder sets two values for the size.
- The linear size (16pt here)
- The optical size
But the font engine and the bindings have to be fixed to that.
(it's my recommendation, no reality)
2. The only method acutally possible to be done are the offscreen
bitmaps handled by NVDI (when the EdDI cookie exists). When opening
these workstations the logical pixel size has to be set. After that
it can't be changed no more each optical scaled font size costs a
lot of RAM. Especially for printing each (non standard-) optical
scaled text has to be buffered as bitmap (either by the driver or
the program itself; it depends on the GDOS release if the driver
saves bitmaps). This bitmap can cost more than the user's (or
his computer's) RAM.
3. Another (not yet existing) possibility would be a free choice of of
linear an optical scaling by v_getbitmap.
4. The most simple way - there wouldn't be a buffer fo bitmaps
needed - would be as follows:
the logical pixel size can all physical and logical workstations.
The scalers *can* handle different pixel sizes, so I think it
wouldn't be difficulty to make NVDI and SpeedoGDOS handle this.

The problem with the magnifying window could be solved by using another
virtual workstation with logical pixels half as big. Both windows could
use the 8pt text then. Both windows would display this text as the font
designer wanted it to look like - and the magnifying window would display
the double size of the normal window.

If different optical scaling can be found in a document, the logical
pixel size has to be changed afterwards - or the linear and optical
scaling has to be set at the font size.

Did anyone get it? (Stef: Yeah, I'd like to get feedback too!)

10.8 Format conversion of scalable fonts

From what I wrote above I hope you'll realize that converting a font from
one format to another is about as easy as converting a highly optimized
program from one language to another ...

Problems:

o The only converting program I (Stefan) know for Atari
is TypetoType fby Hasso Baudis, converting Type1 to CFN
o There isn't any program on any platform that is accepted by the
comp.fonts community (according to the comp.fonts FAQ)
o For a program capable of converting fonts you'll pay a big
amount of money. But even good programs need manual corrections.
Looking for a PD or shareware program won't be

successfull ...

10 Printers

Producer	Printer	Drivers Fitting
NEC	P6+,P7+, NECP...	P60,P70	NB15_(FX...,NX1000)__
HP	LaserJet_II	HP_LJET
HP	DeskJet,_LaserJet_III,IV___	DESKJET_(HP_LJET)____
CANON	BJ10E	BJ10
CANON	LBP_4/8	CANONLBP,_LBP
Mannesmann-Tally__	MT_90	MT90
Epson	Stylus_800	STYLUS

Drivers in parantheses work but don't use the ability of the printer totally. This means - for 24pin printers - that these are used in 9pin mode. At HP compatible Laser and Ink printers this means that the data isn't packed though being supported by the printers.

Some Deskjet drivers are said to make problems. In this case try the Laserjet driver. The printing takes longer then (due to more data) but the problems should disappear.

The BJ10 drivers use the Proprinter emulation. Don't use them in the epson mode!

The Stylus shouldn't be used with 24needle drivers. The needles overlap (the ink dots of the stylus don't) and so the drivers just don't print some dots.

The meaning of compatible normally is made by the producers of the compatible printers.

Notes:

o If You don't find your printer in the list and knows a fitting driver, please write me a note.
o Try other drivers even if you have found one fitting to your printer.
o Of course the FontGDOS drivers have a lot of problems with the memory. But the speed of'em is faster than the other (except Speedo ones).

12 Programs

Nowadays it's obvious (but not usual) to use GDOS in every program.

The following list is limited to those using GDOS to print too.

Kind of Program	Program	Distributor	Sp
Chart/Measureanalysis	Xact	SciLab	y
MM-Graph	Overscan

This list is no commercial. I'll include every program I get to know.
(Comment by the Translator: Sorry for mentioning Atari Works three times,
but I wanted to keep the 'Text/DTP' and 'Spreadsheet' Chapters')

Notes:

o Programs listed in the Speedo column with 'y*' support Speedo but don't
use it - don't output text too.
o Xact can print Speedo fonts without Speedo too.
o FSM-GDOS is included in the Wordflair II package.
o Platon only uses GDOS to make output of metafiles
o I didn't make it to print via GDOS in OPUS.
(I've been told, OPUS doesn't chose the fonts it can handle with,
and doesn't print if even one of these fonts is installed. See 7.1 too)
o Programs only printing via device 21 (like OPUS and CLA are out! (see
16.2 too)
o 7up only uses non proportional fonts (e.g. Monospace 821 from Speedo)
o Tempus Word only supports Speedo Fonts but prints with its own drivers
This seems to be due to the capablity of handling CFN and its own fonts
o That's Write & 1st WordPlus 4 both can use Speedo fonts without
Speedo. TW 4 will be able to use TTF and Type 1 without SpeedoGDOS
(well, TW and the SpeedoGDOS 5.x font extension to TTF and Type 1
is created by the same coders ...)
o LDW-PowerCalc: MAXON lost the purchaser database. Ask COMPO for updates
(Stef: hmm, it seems to be a German-only problem?)
o Tarkus is a label printing program.
o In 16.1.2 you'll find a list of programs working *only* with ABC-GDOS.

Kandinsky Version 1.73
ftp://ftp.cs.tu-berlin.de pub/atari/Graphic/kand173
(Version 1.74 is the actual one, though, note by Stefan;
Gerd: but not on any FTP-Server
Stef: Should anyone put it there?)

13 Utilities

13.1 fontfix

Problem: The font height is included wrong at some fonts. fontfix discovers this error and corrights it.

In the Internet fontfix can be found here:

ftp://ftp.uni-muenster.de/pub/atari/Applications/Dtp/Fonts/Gdos
ftp://ftp.cs.tu-berlin.de /pub/atari/utils

13.2 Outline fonts

Outline Fonts Accessory by CJG

What for: This utility edits the EXTEND.SYS for SpeedoGDOS. This file contains a description of the volume from the Speedo caches, the fonts and the font-sizes. The caches can be saved to disc and loaded again from there too.
A good done program except to the preset cache sizes fitted to FSM-GDOS not Speedo.

Filename: OUTLINE.PRG alias OUTLINE.ACC, 67644 Bytes
Speedo 5 49254 Bytes

Spread with SpeedoGDOS.

(Why doesn't Atari make it to make programs including a display of the version?
Chris: Because Atari aren't in the computer business any more :-( )

13.3 Printer drivers

GDOS Devices Accessory by CJG

What for: To edit the ASSIGN.SYS

Filename: DRIVERS.PRG alias DRIVERS.ACC, 64878 Bytes
Speedo 5 41592 Bytes

Before starting this program it's better to create a backup of the ASSIGN.SYS!
The (at least) two reasons are the following:

1. The informations about the bitmap fonts are removed without comment.
2. ASSIGN.SYS is removed by a new one if 'Benutzereigen'-'Hinzufuegen' (in the German release) is selected wihtout any chance to get it back. (The English Version should have a Dialog like 'Own drivers' 'Add' or similar). To all coders: Don't copy that style!

If this utility should display no drivers sometimes simply start ASSIGN.PRG (see next subsection)

DRIVERS.PRG/ACC only displays the Speedo drivers of my collection. Does anybody know, how it does this? Even it doesn't display the Filename but a name being included as string in the driver. How does one get there?

13.4 ASSIGN

ASSIGN 1.0d is by Dirk Sabiwalsky (PD).
(Supplied with NVDI3?)

It tests three things:

o Are there several fonts using the same ID and have different Names
(Typefaces)?
o Are there several fonts using the same ID and the same Pixelheight?
o Are there several fonts with the same name (Typeface) and different
IDs?

13.5 FONTCHK

FONTCHK tests GDOS fonts if they have possible errors.

For example, it's spread with ProList.

13.6 FONTCNV

Converts GDOS fonts from Motorola to Intel format.

Comes with ProList too.

13.7 GEMFont

Fonteditor being able to read Signum- and PK (TeX)- Fonts too.

Internet: ftp.tu-clausthal.de:pub/atari/systools/gdos/gemfo120.lzh

Use the chance to get a new unlzh or lhxarc.

13.8 FontMonger

Converter and editor for different vector formats. Only works on IBMs or
MAC though.
(Chris: Does *not* work with Speedo fonts. We have a copy at work and
I've tried!)

13.9 Font ID

Font-ID is a little freeware tool made by Frank Schneider. In a window it
displays the fonts installed with GDOS or SpeedoGDOS including the Font-ID
in different sizes. So you can get an overview when you don't have a program
with font selector/ID display function at the moment.

13.10 X4U

Speedo fonts have much more glyphs than the ones displayed in the ASCII
charset. With this program by Peter Hellinger you can setup, which char is
to be used at which ASCII code. It's distributed by R.O.M.

Now a little story about this program (MausNet readers may remember):
R.O.M. logicware planned to put this tool on the SpeedoGDOS 4.2 disc too.
That didn't work, Peter used his Magic library (see subsection 14.3)
making the program too large. So R.O.M. sold it seperately for DM 25.-
what made Peter (often called ''Helli``) force a lawsuit (Stef: correct
translation?). Ulli Ramps got tired of this argument and set X4U's status to

PD, making Helli call his lawyer again (Stef: *sigh*)
(Hold the line, to be continued next subsection)

13.11 Charmap

Charmap is Atari's original tool making the same as X4U, but only
developers got it.

But charmap is the name of Helli's newer-better-larger (Stef: that's my
note there) version of X4U, which is - at version number 0.9 - Freeware.
(To be continued)

13.12 GDOS-Font

Filename: GFONT112.LZH
Shareware with limitations
GDOS-Font 1.12 (Aug. 22nd 1994) by Holger Weets@ol.maus.de
(Remember: when sending mail to any @maus.de user, no mail bigger than
16KB!)
Display and editing of GDOS fonts, including or removing them in the
ASSIGN.SYS! = Never more manually changing the ASSING.SYS, GDOSFONT does it for
you!
(Stef: This is the - translation of - the original FILE_ID.DIZ. Just to
note this, if you think it's a commercial <g>)

13.13 REFONT

This Program converts Type-1 fonts between Mac- Unix- and Windows format and
TrueType fonts between Mac- and Windows. But no conversion from TT to T!
or vice
versa (Stef: :-/=)

13.14 Arkus

Arkus is a font manager by Pergamon Software

But I didn't quite get the point, what this program may be used for. Can
you tell me?

14 Font Selectors

We all know this useful thing about file selectors:
The Operating system soesn't only offer a file selector, it's got an interface
to use own file selectors in every application.

A scaled interface for FONT selectors doesn't exist, normally they're
offering their jobs by cookies. The work to make a program support font
selectors via cookies is much smaller than writing one for yourself. If there
wouldn't ... but let's take a look at the candidates first.

14.1 UFSL

UFSL from Michael Thaenitz is freeware and is allowed to be distributed with
any application. The last version is 0.97 from April 30th 1994.

Fonts (faces) and size can be selected comfartable. But I didn't get a face displayed after selecting a free size.

Attributs are missing and the dialoge is only modal.

UFSL sadly isn't in development no more. But for further development of an *unique* interface for font selectors, the sources are free!

14.2 XUFSL

XUFSL 1.05 by Stefan Rogel is the one with most features - compared to the other ones mentioned here. It even can handle Speedo 5 (and NVDI 3, note by Stefan) too.

This selector looks great to me. The large amount of information is handled very well with index cards. The flaw I noted (Popups to select faces), doesn't disturb me as much as in release 1.03 (where the big amount of popups were quite irritating).

All interesting informations about the face selected are shown, the complete ASCII table can be requested.

My wishes would be:

- printing the ASCII table of the font selected
- access to the complete 16Bit charset

14.3 Magic (from Peter Hellinger, *not* MagiC!)

This selector is part of Magic 4.00 from Peter Hellinger and not available separately. Magic itself - NOT MagiC! the multitasking OS - can be copied freely. But the information how to use it must be paid.

It's nice that this selector can be set in a non modal dialog, FlyDial or normal dialog. Scrolling through the list is fast too.

Attributes aren't selectable and the size selection in the edit line isn't acceptable the way it's done.

The selector only can be used when the event handling is completely done by Magic, what makes the coder use a fixed code structure (working parts must be rewritten, other things don't work anymore) and produces new errors.

14.4 FontSel

FontSel from Holger Weets is totally cmpatible to UFSL for the programs. It's small size and the selecteable attributes are a very nice feature.

Version 1.00 from May, 11th 1994 only shows the System Font when using Speedo 5.0a.

14.5 Minimum requirements

A Font selector should work with all OS-releases (TOS, MiNT, MultiTOS, MagiC!, Geneva, MagiCMac, Janus, GEMulator Stef: uuh hard stuff for coders <g>). Plus with every video hardware supported by the VDI and should show each font available from every GDOS version. (Pixel fonts,

Speedo fonts, Type1 and TrueType).

14.6 Characteristics liked to be seen

14.6.1 Attributes and selection

Its quite complicated to make the user set further characteristics of fonts
in an extra dialog. So, at least the standard attributes (bold,
outlined, ...) should be directly made available. Well, this could cause
lotsa argues, but when using vector fonts, attributes are selected by
using another face of the font (bold, italic ...) and not enabling this
for bitmap fonts would be very inconsistent (Stef: It's great to have a
German<->English dictionary for computer related words <g>). If a program
doesn't support them they should be made invisilbe (Stef: or - as the
menu use - disabled).

Same with the skew angle.

Not every program can handle all fonts. According to this every program
must be able to set, which faces have to be invisible or disabled.
An example:
Some programs (like 7up) only use non proportional fonts.
A further feature (but not exlusively, due to BASIC) it should be possible
to pipe a procedure variable to the selector setting the kind of displaying
for each face.

14.6.2 Windows and event handling

It would be nice if the program could set the selector in a window or normal
dialog too. It can be done much easier and more flexible than in Magic.
The font selector opens a window in the calling program's name and gives back
the window handle to it. The application further handles the events and if one
is for the font selector's window it is passed to it via a procedure call. This
simple mechanism enables the use of multiple (system wide) selectors, colour
pickers (and more) distributed by different producers being in windows on the
screen the same time.

Once more:
This parallel work only is possible when no selector uses
its own evnt_multi loop.

Almost all utility coders want to make it the other way (and do so). So, let me
show you, what happens, when utilities make their own evnt_multi call and set
unhandled events to the application:

In this case there are several utilities for an application, all making the
evnt_multi call themselves. One of those utilities makes this call, can't work
with it and gets it to the application. And now? What should the app do with it?
It isn't able to get this event to other utils, but one of'em has to handle it.
But all utils won't take any events from the app ...

Due to this an app can use one (window) utility as maximum. If an app uses Magic
(by Peter Hellinger) it can't use *any* utility.

14.6.3 misc

Finally an application should be able to set if it doesn't matter if a font is proportional or not (the user can have displayed it if he really wants to). When not using this information the call of a selector can happen much faster!

My favourite selector actually is the one of papyrus, but it only works in papyrus (yet?) [Stefan says: It's my favourite too ;-)]

14.7 About dialogs

This subtopic is quite off topic to this FAQ, but I think it fits here. Take it as a note by me about Tim Oren [Ore85]

I was quite curious about why I like papyrus' font selector much more than XUFSL 1.03. This one does include all features offered by the new libraries. *And* it doesn't break any design rule I've read.
The thougts below are a common proposal, not only for XUFSL 1.03

So I'll try to write, what's disturbing me intuitively [hrrrgn, note by Stef] And that's not about font selectors but about dialogs in common - but fixed to a concrete example ...

The popups (with sliders) are, what's disturbing me most.

State-of-the-art user interfaces (Gerd writes "Benutzeroberflaechen", but in German it's "Benutzungsoberflaechen", the first is the user's skin <g>) offer selection instead of input (like those *'&" MS-DOS programs). To make this possible, the selectable thing have to be visible at first sight.

Popups surely can't show everything. And if there are more of'em it's impossible to take a short look, but one has to take a deeper check what's available too. Plus one more mouse click to open the popup.

For the theory: Popups are modal parts in non modal (or worse: in modal) dialogs and modal dialogs are quite interrupting (not only to the user!)

Popups don't fit to the ideas of intuitive user interfaces. I know you're proud of using Popups (even with sliders) but please: don't use them if possible.
(Note by stef: file selectors are soon not out of concurrence, there's a new - non modal - one, released early '95! Looks nice, I recently got it. FREEDOM 1.0 beta;
Note by Gerd: It uses a different mechanism than described above; it needs an additional process
Stef: But the server - ''eating`` about 180KB of RAM - can be reloaded when needed and is ended after use; good thing)

15 Distribution

15.1 Atari

The drivers named with Atari are availabel from Atari.

This Package is available at Atari shops too.

No docs but for this price ...
(That's the way in Germany - other countrys may differ!)

15.2 BELA

The fonts named BELA were available from BELA

There were two disks with packed printer drivers and fonts for them.

The fonts DO have the same IDs like the ones from Atari, but the internal
font NAME is different. Due to this these fonts are correctly not accepted
by some programs if used with Atari fonts.

There's almost no documentation. Not even a hint about the one owning the
copyright for the drivers or about the author(s)

One last thing about BELA: R.I.P. ;-)

15.3 Language

The driver named Language is spread on the language disc of the MegSTE

15.4 Internet

The drivers signed with 'I' are to be found in the Internet.
For example: ftp://ftp.cs.tu-berlin.de/...

15.5 Working Title

The WT drivers are spread with Calligrapher. They are (c)Working Title, the
wt driver are licensed by Working Title.

No drivers are on the Calligrapher DEMO-disc. The drivers coming with
Calligrapher-lite (DM15.-) are signed with CL in the tables.

Screen fonts are on both discs.

15.6 XWindow System

There are PD Speedo fonts from Bitstream. These can be used with Speedo 4.2.
I (Gerd) have no problem using them (even the umlauts are correct)

To find them let Archie (see 11.12 FTP) search as follows:
set search sub
prog speedo-

The fonts
font0648.spd -bitstream-charter-medium-r-normal--0-0-0-0-p-0-iso8859-1
font0649.spd -bitstream-charter-medium-i-normal--0-0-0-0-p-0-iso8859-1
font0709.spd -bitstream-charter-bold-r-normal--0-0-0-0-p-0-iso8859-1
font0710.spd -bitstream-charter-bold-i-normal--0-0-0-0-p-0-iso8859-1
font0419.spd -bitstream-courier-medium-r-normal--0-0-0-0-m-0-iso8859-1
font0582.spd -bitstream-courier-medium-i-normal--0-0-0-0-m-0-iso8859-1
font0583.spd -bitstream-courier-bold-r-normal--0-0-0-0-m-0-iso8859-1
font0611.spd -bitstream-courier-bold-i-normal--0-0-0-0-m-0-iso8859-1

(Stef: These fonts have been spread to German BBS in one package, maybe
one helpful soul got it to your next BBS? Some CD-ROMs have them
too)

15.7 COMPO

COMPO offer two Bitstream Speedo packets with 100 fonts each. One costs
DM99.- Their names are ''OFFICE`` and ''GOLD``
(At your own risk)
The Office pack is good value. The fonts are:

Futura (17) Humanist Slabs 712 (4)
Blackletter 686 (1) Americana (4)
Bernhard Modern (4) Caslon 540 (2)
Blippo (1) Bernhard Bold Condensed (1)
Bernhard Tango (1) Balloon (3)
Bruce Old Style (2) Copperplate Gothic (5)
Bookman (2) Caslon Openface (1)
Caslon Bold (2) Futura Black (1)
Compacta (6) Humanist 970 (2)
Humanist 521 (11) Aldine 721 (7)
Humanist 531 (3) Bernhard Fashion (1)
Humanist 777 (7) Caslon Old Face (3)
Aldine 401 (4) Bitstream Amerigo (5)

Another package with 40 Speedo faces - called ''Intro`` costs DM69.-

Since some time COMPO also offers a CD-ROM with TrueType and Type1 fonts/faces.
These seem to be the same ones as on the StarType CD, but TrueType and Type1
on a single CD-ROM.
The price is DM99.-

15.8 IMG-0300

This is a Freeware GDOS driver for monochrome IMG output. It can be used
as a normal printer driver (21-30 in the ASSIGN.SYS)

In the Internet:

ftp://ftp.uni-muenster.de/pub/atari/Gdos

15.9 FTP

Many students can get software worldwide via ftp. Prices for steady
connections are constant, but connections between America and Europe
have to be paid depending to the volume of data transferred.

Please try not to ftp across the big blue and use short ways.
Use transferring times not in the range of working at the server!
('9 to 5')

Files with known names can be found by Archie.

In Germany:
telnet archie.th-darmstadt.de
login: archie

help

In the US e.g.:
archie.ans.net

Archie will automatically display other archies. use the one thats' closest
to you.

The Archie databases ask about once each month one ftp server after the
other for freely available files

One more small hint: atari.archive.umich.edu ist always totally busy. Not
even mirroring to other servers helps.
Better connect to
- amiga.archive.umich.edu
and type cd atari from there.
This computers have the same HD mounted. BUT: First search your own vicinity!

15.11 SciLab

SciLab's GDOS drivers are not mentioned in the driver's tables though they
are very favourite - specially the colour drivers.

These drivers no langer can be ordered without a program. This is due to the
programs that lots of programs have when using the colour drivers. SciLab
would be blamed then.

You only can get these drivers by ordering a program from SciLab or making
the distributor (of the software you use) licensing those drivers. SciLab
always has 'an open ear' for that. Those are especially the Speedo capable
drivers for HP 600dpi and HP 500C/550C. Actually these are distributed with
Speedo 5 too.

15.12 Star Division

Star Division sells two CD-ROMs (StarType) with 500 TrueType/Type1
fonts/faces. These are mostly complete packages of fonts.
One example:
Zapf Humanist 601 is available as:

o roman
o italic
o bold
o bold italic
o demi
o demi italic
o ultra
o ultra italic

(Stef: and lotsa Swiss 721 ...)

A lot of Bitstream fonts are included. (e.g. Zapf Humanist 601 as noted above)
There are two ITC faces too. In Germany these two CDs are (at least)
available for DM69.- from Vobis. A booklet with a short overview is available

there too.

15.12 Thierry Rodolfo

Thierry Rodolfo made the drivers with T.R. as note.
You'll find them in the BBS BRASIL and on
ftp://hensa.micro.ac.uk/atari/tos/n/n196/...

MEMORY_2 can be found at:
ftp://ftp.cs.tu-berlin.de/pub/atari/GDOS/

15.13 Others

I don't make a choice of drivers. The limit is all of them. The authors (and users) of the programs are asked now to write me, which GDOS drivers come with the programs (With information of: Codelength, Date and known bugs).

A comparison of TrueType collection CDs is found in [Hil95]

Anyone using one of those low priced CD (500 faces for $9, DM15, #6) shouldn't take care of Umlauts (Stef: I still recommend "vowels" for this ...), kerning or a good looking print image. *Then* it's not ugly to use more than 20 fonts on a poster (*sigh!*)

16 GDOS Versions

16.1 The ones from the bones

Atari-GDOS, AMCGDOS, ABCGDOS, NVDI and possibly G+Plus use the same drivers.

16.1.1 Atari-GDOS 1.X and AMCGDOS

The Atari-GDOS is the father of each GDOS coming after it. It's most remarkable character are lots of bugs and it's horrible slow speed. But that's history.

AMCGDOS is faster and has less bugs. But it almost has the same capabilities and was distributed together with Atari-GDOS.
(Stef: Atari GDOS 1.1 and AMCGDOS - 3.21 and newer tested - work with MagiCMac)

16.1.2 ABCGDOS

ABC-GDOS is included in ABC's GEMVDI.PRG. When using this GDOS an expanded syntax has to be used for the ASSIGN.SYS:

driver number driver's file name ; technical info ;
icon text

The first '';`` makes other GDOS version ignore the further information (commented part).

technical info: the driver's real name as available by vqt_devinfo with SpeedoGDOS 7 4.2 or NVDI 7 3.0.

It only works with 68000 based Atari computers - I guess the interupt level is manipulated (Stef: good coding ...)

ABC-GDOS is from The Netherlands and did spread almost not.

ABC ported some Digital Research programs to Atari computers. These programs won't work with other GEM releases than 2.2 (ABC-GDOS). So I'll note them only here:

WordChart, Graph, Paint and Draw

(Stef: hmm, seems to be no big loss <g>)

16.1.3 G+Plus

Does anyone know anything about it?

(Chris: Yes I have some info around somewhere... It is just a GDOS 1.1 clone which runs faster. It also automatically switches the ASSIGN.SYS settings depending on the program being run. A very old GDOS.)

16.2 One step forward

Even though there was a very good GDOS in NVDI, Atari had an open ear to the request of users and coders and tried to raise the capabilities of GDOS.

16.2.1 FontGDOS 2.0

This is a GDOS still using bitmap fonts. It uses own drivers.

The drivers from this package are really much faster than the former ones. (Only bitmap fonts and graphics are comparable of course)

I didn't have any problem using these with other GDOS versions but you must limit to the old fonts.

FontGDOS is the follower of the Atari GDOS. Mainly it differs with the Bezier function and faster (and color-able) drivers. It's got nothing to do with FSM-GDOS or SpeedoGDOS.

FontGDOS is availabel from several companies which use it for their programs.

16.2.2 FSMGDOS 3.0

During the development of FontGDOS, Atari created a GDOS that can handle vector fonts (named OTL in this FAQ). So FSMGDOS isn't a follower of FontGDOS, but was developed the same time. FSMGOS practically was ready to be released but due to massive protest by the developers it was cancelled in the last moment. Except to bundles it never has been distributed officially.

the Imagen outline font format by QMS/Imagen Corp. was used

16.3 Actual Developments

16.3.1 SpeedoGDOS 4.0 and 4.1

See [Res92] too.

The information if it's a Speedo or bitmap font can be found in byte 33 of the Fontname (vqt_name, INQUIRE FACE NAME AND INDEX, VDI 130). zero means bitmap font and one means FSM- or Speedo font.

Some Problems are inportant to be mentioned:

A coder can't find out if a driver can handle Speedo fonts (see last question in 10.3)

Some font IDs are used by bitmap AND Speedo fonts, though different fonts with similar IDs may never be installed the same time.

If you don't take care of this you'll get bombs.

It depends to the user to install the right drivers and fonts. The coder can't help here to stop errors.

The best way is only to install bitmap fonts with the right drivers or to use a Speedo only system.

The monospace font coming with SpeedoGDOS 4.0 has no umlauts (ae, oe, ue ...)

SpeedoGDOS is still in development, ignore the note in [Pru93c].

For installation and coding best is to refer to [Dic93a to c]
Remember starting NVDI before SpeedoGDOS in the AUTO-Folder!

The ones that bought Speedo got 4.0, the Falcon buyers got 4.1

16.3.2 SpeedoGDOS 4.2

Let's see, what Ulli Ramps has to say:

Huhu! [TM] (Stef: Ulli doesn't Huhu, he got bored of it)

The following is a list of changes made to SpeedoGDOS.

1) Line-A - Due to many requests from developers, SpeedoGDOS is now no longer Line-A dependent. All output is done through VDI calls. This was done to make Speedo compatible with various graphics cards, and to make it more multi-tasking-friendly. In addition, users should be able to use various VDI replacements with GDOS.

Another benefit from removing the Line-A dependency is that we no longer have to worry about the scratch buffer used for algorithmic special effects. We have implemented the special effects inside of SpeedoGDOS and the drivers, so that the user/program does not have to worry about the memory needed to accomodate arbitrary sized characters. Unfortunately, this means that old drivers need to be relinked with the new independent library (found in the new driver kit).

There are plusses and minuses of the new implementation of special effects. In many cases, the special effects will be slower. With all previous incarnations of GDOS, you could not use 'bolding' or 'skewing' at non-90 degree rotations; now both of these work at all rotations. On the other hand, 'lightening' used to work at all angles and combinations of effects; now 'bold' mixed with 'lighten' only work

at 90 degree rotation angles.

Miscellaneous Note - When using special effects, many applications have a hard time placing the cursor. In both the v_gtext() call and the v_ftext() call, the only cursor compensation to be made is for bolding. Bolding adds the thicken value to the number of pixels of each character. For rotated characters, note that the extra pixels can be considered a vector along the positive x-axis which is rotated at the same angle as the text and added to the advance vector; therefore, the length of the text string should remain the same at any angle. This is true even when SpeedoGDOS generates characters on a scanline basis (when the character does not fit in the character cache), although it does not implement the special effects. Also, applications should watch for the case when they keep track of the cursor position with vqt_advance() or vqt_width(), instead of vqt_extent() or vqt_f_extent(). In versions prior to 4.2, the application could accurately place the cursor by adding two pixels for every outline character and by adding left and right skew offsets for a skewed string. Now these effects are generated by the outline font engine, so the application must either rely on the extent calls or it must inquire for the advance vectors for characters that are skewed and/or outlined separately. For compatibility purposes, it is recommended that the version number of SpeedoGDOS is checked so that programs can handle both old and new characteristics.

2) Font ID's - Speedo font id's have been promoted to a higher range of ID numbers. This was introduced to avoid conflicts with bitmap fonts and more importantly, with the system font (which conflicted with a variation of Swiss 721). For those applications which use the usual interface with Speedo (i.e. use vqt_name() to find out what the font ID's are), there should be no problem, except if documents have font ID's embedded into formatting information. Of course, all the user has to do is substitute the font. If the application actually goes into the font file header to read the ID, note that we are adding 5000(decimal) to all Speedo font ID's.

3) Printer Driver Incompatibilities - Speedo will now check the printer driver it is trying to load for the '_FSM_HDR' cookie embedded in the driver header information. If GDOS does not find the cookie, it will not allow the loading of any fonts; therefore, you can still use your driver for non-text applications. For future reference, please be sure that the driver header begins on a word boundary for all drivers to be used with this version and any future versions of GDOS.

4) Vst_load_fonts() - We have made two optimizations to the loading of fonts. The first is when a load_font call is made, GDOS checks the date of the extend.sys file to see if it was modified since the last load. A reload used to be mandatory because a bigger scratch buffer might have been required. Since we no longer need a scratch buffer, GDOS only checks to see if a change has been made to the list.

The second change is that GDOS no longer deallocates the global list of fonts if there are no more workstations using GDOS fonts. Therefore, application launches will be faster. On the other hand, the miscellaneous cache never gets cleared of font header information, unless a reboot happens.

5) Memory.sys - The memory driver used to mistakenly open a printer handle.

6) vst_height() - Vst_height used to have a bug in which a maximum point size is reached and then the size begins to shrink. This is fixed.

7) Postscript table - The Postscript table has been fixed (i.e. the indexes were off by 32 for certain Postscript files).

8) Fixed vrt_copyfm() in the drivers.

9) When in 'bicsmode', character 0 was not passed through to the font engine. [Gerd: Speedo can use two different character sets for each font. Once sorted like a normal Atari font and once like a Bitstream font. When using the Bitstream mode, character 0 is space. That's why the recommendation to set a 16Bit char zero terminated (in [San94]) is wrong)

10) Negative point and set sizes - The handling of negative point and set sizes has been made consistent with the original handling in FSMGDOS.

11) The handling of fractional setsizes was incorrect in the drivers, and is now fixed.

12) V_ftext() in the drivers can now handle the offsets passed into the ptsin array.

13) Screen drivers can now safely load as device 10.

14) The memory driver can be loaded residently.

15) vqt_devinfo() - Vqt_devinfo() now returns information, whether or not the device has been opened. Furthermore, the device drivers name, found in the driver header, is copied into the ptsout array; the name is 26 bytes long. Note: if the driver is not SpeedoGDOS-compatible, a null string is returned, and if there is an error, a -1 is returned in ptsout[1].

16) vst_width() - A new call has been added to Speedo. The call is similar to vst_height() except that it sets the width. The bindings are identical except that the opcode is 231. Note: As with vst_arbpt() and vst_setsize(), you must call the general call (i.e. vst_arbpt() or vst_height()) before using the width calls (i.e. vst_setsize() and vst_width()). In addition, the general calls always reset the widths.

Miscellaneous Note: Although these have been published before, many
requests have come in for the SpeedoGDOS error codes. Here they are:
Code 1 Out of memory
2 File open
3 File read
4 File write
5 Speedo engine error
6 Character too large (not used, defaults to line output)
7 No room for scratch buffer
8 Character cache error
255 Miscellaneous
These errors are placed in the error code address that applications
should provide. Note that if you have MultiTOS installed, GDOS will
report the error to Salert, the system alert box. A revision of the
error handling is overdue, since some of the errors are no longer re-
levant (e.g. code 6), and error code 5 is returned for the lack of
availability for pair and track kerning (in addition to the serious
errors).

Well, again a big thank you to Ulli!

Now it's me again:

The Installation program for Speedo 4.2 had a small bug yet. If a NEC P
printer is selected, NEC_P.SYS ist written into ASSIGN.SYS. But the
distributed driver hat NECP.SYS as filename. R.O.M. fixed that.

16.3.3 SpeedoGDOS 5.0

SpeedoGDOS 5.0 was developed by COMPO/no!software using the sources by
Atari.
More than Speedo 4.x it can scale TrueType and Type 1 (see 7.2). Price:
DM129.-
(at your own risc)

Now 9 printer drivers are included - the additional ones. Speedo 5.0 is an
upgrade, so you have the other drivers. But: Which are the old divers? The
ones before Speedo 4.1 don't work (and only falcon users have 4.1; the ones
who bought Speedo from COMPO in the beginning only got 4.0)

So I at once printed a text using Speedo 5.0, NECP.SYS (Speedo 4.2) and
ProList. And? Surprise! It works. That's really astounding because ProList
and my own program (see 2) had problems with this driver and Speedo 4.2.

Using the drivers of Speedo 4.0 at least shouldn't work due to the changed
jobs of Speedo 4.2 and the drivers.
(Could anyone test Speedo 4.1 drivers with Speedo 5.0? I don't quite believe
this works)

Here's how I think an upgrade works (be careful satire)

==========
User: Dear Mr. Compo [...] but my Speedo 4.0 drivers don't work any more.

COMPO: ... best wishes to your decision ... BUT: Speedo 4.2 isn't an
official release. It's especially made for papyrus and not useful
for other programs. On the other hand...though...seen from a
different point...maybe...possibly...Finally you need the drivers
from Speedo 4.2. But we don't distribute them. Ask R.O.M. about
it ...

[later]

USER: Dear Mr. R.O.M., ...I'd like to get a downgrade, free of course.

R.O.M.: ...don't work...our own costs...bla...etc...better wait for NVDI
3.0, we certainly can put you on the list.

User: "'$&"'$/(!'&!^≠
====================

Well, *I'm* full of anticipation how users that only had Speedo 4.0 will be
able to make printouts.

Versions of Speedo 5.0 until now:

5.0a (Aug. 3rd 1994)
First release

5.0b (Aug. 8th 1994)
From now T1 & TT font loading works faster.

Known Bug: After calling vqt_headerinfo() the files arent' closed again.
Whe using programs making this with all fonts there maybe can be no more
filehandles (the amount of them differs from one TOS release to another).

Since Speedo 4.2 the 'outlined' attribute only works in special conditions.
It depends on the font used, the SpeedoGDOS version, the point size ... and
which Mantra's are mumbled at full moon.

5.0c (Aug. ? 1994)
From here LOWMEM=0 works like noted in the manual.

Now LOWMEM=0 works as stated in the manual.

16.3.4 NVDI up to V2.51

These releases were made of very fast screen drivers and a very fast GDOS.
Compared to Atari-GDOS, NVDI had almost no bugs. But there functions weren't
almost any more functions.

The use of this release is still *very* useful for those
working with SpeedoGDOS 5.0, which doesnt' have a faster VDI ...

16.3.5 NVDI 3.0

From 3.0 NVDI is capable of scaling Speedo and TrueType fonts. Different
from SpeedoGDOS it can't scale Type1. The Behne brothers (correctly!) say
this format has least capabilities and only would blow up NVDI. But lots of
special fonts are only available as Type1 and I could use some of them.
But since the existence of Multiple Master fonts (see 7.3.5) I don't think

the decision was that good ...

A (by principle very good) conversion of the formats is possible but very difficulty (see chapter 7.4) and no Atari program doing this exists yet. So the Behne's decision has advantages and flaws.

NVDI's printer drivers are found in 6.8.3

bugs and problems (I know about):

o All released versions of NVDI ignore the pixel size relation. (aspect ratio) for output of circles and ellipses.
o when calling v_clswrk after vqt_devinfo to a physical workstation creates a privilege violation when using MultiTOS. With NVDI 3.02 we'll get rid of this bug
o The character mapping isn't compatible to SpeedoGDOS 5.0
o There's no alert when you try to install NVDI (release before November '94) on a full (hard)disk.
o You'll get a memory violation when using the cache CPX with MTOS. Again, wait for NVDI 3.02.
o Output of rotated text doesn't work with some fonts (e.g. MONACO08.FNT), the chars are always set to 0 degrees.
And bitmap fonts with 8pt or less aren't light when this attribute is set. This happened when using the monochrome driver and the 8pt system font; not woth other fonts or bit depths. Fixed since Nov. 10th '94
o vqt_fontheader get's an incorrect TDF path.
o Track kerning doesn't have effect.
o When a skew angle is set, vector character's positions aren't located correctly. Once a skew angle is set the text is moved to the left or right (depends on the skew angle - positive or negative). This doesn't happen with SpeedoGDOS. Will be fixed with NVDI 3.02

Coder's documentation: [Beh95]

16.4 Comments

Users and coders should be happy with the speed of development. Even the numbers of font format included in the programs doesn't have anything comparable on any other platform.

The time between the releases of SpeedoGDOS 5.0a to 5.0c - making one think there wasn't much of betatesting - doesn't satisfy a lot but, on the other hand it's nice to see that the competition by NVDI 3.0 makes the developers hurry.

SpeedoGDOS 5.0 creates problems in some applications that worked perfectly with Speedo 4.x. This may be due to the negative handles that 5.0 uses for the new formats. That's not a bug, because one shouldn't calculate with handles. But some apps do it though.
The coming workaround is the interpretation of handles as unsigned integer (SHORTCARD).

For coders the manuals coming with SpeedoGDOS 5 and NVDI 3 are only a bad joke. Even simple user's questions aren't answered:
TrueType (and Type1 with SpeedoGDOS) are handled. But these fonts are created in platform specific formats. Which ones are handled and what files with what extensions are needed? Without this information both programs aren't very useful.

A ''beta`` of the coder's docs for NVDI 3 is Public Domain and available by ftp or from BBS's [Beh95]. COMPO promised the same for SpeedoGDOS 5.

A provisional coder documentation is free on request when updating to SpeedoGDOS 5. You only have to *know* that it's possible. Sorry for this late information but I didn't know this before too. It's still available (for three Deutschmark in Germany by sending a stamped envelope addressed to yourself). It's 90% Englisch and 10% German, so it's sent to foreign countries too (Stef: try your country's COMPO dealer?)

Here some more differences between NVDI 3 and SpeedoGDOS 5. Get your own clues.

o The driver's concept
A real plus for NVDI 3. They're small, fast and
easy to be configured by the user. But they're not able to print with colours yet! And setups aren't to be copied, due to everything set in one file.
o Print to files
NVDI drivers can print in a file and the program won't
notice this (SpeedoGDOS can't)
o Need of RAM.
NVDI 3 needs about as much RAM as SpeedoGDOS 5 and NVDI 2.5 (when using the same cache sizes with both GDOS versions)
o Installation
NVDI 3 is begginer-friendly to install BUT: Everything
having the same name as a file to be saved is overwritten without any request to the user: META.SYS and the old Screen drivers. This makes different configurations for testing quite difficulty.
But this may be more interesting to coders (and freaks) and they'll be able to rename the old folders before, aren't they ?-)
Only since November '94 there's an alert when there's not enough disc space for NVDI 3.0
o VDI Speed
NVDI 3 is a bit faster than SpeedoGDOS 5 and NVDI 2.5, which is
much faster than SpeedoGDOS 5 without NVDI. But SpeedoGDOS 5 and NVDI 2.5 can be enough. This combination is about as fast as NVDI 3 when the fonts used fit into the caches.
o Scaler Speed
Both scalers are the same. Don't look here, why SpeedoGDOS is slower.
o Bugs
Current changes here. I don't know, who actually has more bugs.
o Number of font formats
Only SpeedoGDOS has Type1 capability. Some of those fonts are very expensive, but there are special fonts not available in other formats.

o The font's concept
Insiders are fascinated by NVDI's font concept. But you won't get the
documentation for "normal coders" from the Behnes. Did'nt even
Microsoft lose a t court for such actions?
(Stef: I guess the concept is close to Bitstream's recommendations
(font suitcases and more). And Bitstream's docs aren't free too. I
talked with the Behnes at the ProTOS fair about it)
o Via cookie NVDI claims to be like SpeedoGDOS 5.0, but (obviously) it isn't.
But SpeedoGDOS 5.0 isn't SpeedoGDOS compatible too. Huh? You ask why? Well:
There are several versions of SpeedoGDOS 5 (with different
functions/opcodes) and none is documented. Even worse:
Some SpeedoGDOS Version have some experimental functions which aren't
allowed to be used. In the past functions *always* were documented that
it's allowed to call VDI function to check their existence.
(Chris: Aaarrrrgggghhhh!)

17 Source

Being a developer it's possible to get an almost complete printer driver in
object code. This one only must be adapted to the special printer.

This package is available for GDOS and SpeedoGDOS.

18 Tips'n Tricks for users

18.1 Pixeltrash at printing

Printing graphics on a NEC P6+ (maybe other printers too) including a lot of
black in a line I often had the problem that one line was left out (Speedo-
drivers NB15, NECP) or two lines were printed displaced in one line (Speedo-
drivers FX80, NX1000).

This happens when printing directly and via CENSPEED. When using VARSPOOL
this effect is gone.

VARSPOOL can be found on the driver disk of the NEC-printers.

18.2 NEC P6+

Once in a while a NEC P6+ will get noisy (rrrrrrrrrrraattatatattaa).
When You open the front you'll see a round stick (about 1cm thick).
Put two drops of sewing machine oil on it each year (you'll get it from
Mom)

18.3 HP Deskjet 550C, 560C and Deskwriter 510, 520

These printers have a hardware error in the series produced between June
93 and March 94: From time to time the pinch rollers don't work.
Registered users get ''bug fixing`` parts ...

18.4 Overwritten Speedo faces

Sometimes Speedo writes in face files producing interesting effects. To fix
this I have a second order besides GEMSYS filled with the Speedo faces on my
harddisk. If I get strange effects again I copy these files to the GEMSYS

folder. The almost fixes it in most cases.

19 Tips'n Tricks for coders

19.1 Fontsize and Pixelsize

Here are my experiences with GDOS and WYSIWYG. Credits to Ulrich Rossgoderer for confirming these.

It's about the output of vector graphics and text on screen and printer.

The size of text is defined in point and is always the same - independent from the resolution of the output device.

Different are vector graphics: they have to be recalculated in pixels before the output. Should be no problem because when opening a virtual/physical workstation You get the pixel size in micrometers in devParm[3] and devParm[4].

Let's assume the vector graphic is saved internally in micrometers, then the definition points at the output simply have to be divided by devParm[3] or devParm[4] to get the position in pixels. When doing the output in windows an offset has to be added. but thats not relevant here.

So far for the theory being quite simple so to this point (see [Gar93]). Now for the practice.

As described above we output a text and a border - saved internally as vector graphic. It doesn't matter here if the text is a Speedo or bitmap font. To have a better chance to compare the border exactly surrounds the text.

Doing this I got the following experineces: The text exactly filling the border on the screen (ST-high) is - when printed - much too small compared to the border.

An error in the recalculation of the pixelsize can't be the problem, because I made the printing with the drivers NB15, NECP, FX80, NX1000 and the results are the same.

I have only one explanation for this: The screen driver supposes a different resolution for the pixel size than for the font size.

Two solutions I can offer:

First you can use another pixel size on the screen than the one given from the operating system. After opening the virtual workstation (and ONLY this one!) I calculated
devParm[3] := 282
devParm[4] := 282
and with this parameter I made the recalculation from micrometers in pixels. Now the relation from graphic to text on screen and print-out is exactly the same. But now a DIN A4 page doesn't fit on the screen in it's width. The numbers are found by me the experimental way and possibly can be optimised

Another solution may be this: Use a smaller font size for the screen (and ONLY there!) by multiplicating the size with 72/96. This is simple with Speedo fonts because the size in points can be defined by almost endless values behind the point. Using bitmap fonts this won't work due to not having a screen font in the 72/96ish size for every printer font.
(Stef: Difficulty to translate this, sorry)

This method surely is to be midified for ST-Mid and other resolutions.

From Wilfried Behne (Half NVDI ...) SpeedoGDOS ignores the devParm[3] and [4] - values of the screen drivers. The values of physical workstations ARE taken.

19.2 Selecting drivers

When testing several GDOS programs I found out, that some coders have problems
with the following reasons:

Users can freely assign drivers in the ASSIGN.SYS.
There may be a setup like

23 FX80.SYS
27 NECP.SYS
28 NB15.SYS
31 META.SYS
61 MEMORY.SYS

How may a coder find out which drivers are installed (and ready)? Even though there's no Printer 21?
Quite easy: When the program supports printers ALL drivers from 21 to 30 are to be opened and closed again at once. An installed driver gives back a devicehandle >0 when being opened. vf_devinfo gives back correct values when a driver is opened.

Do the same thing with drivers 61 to 70 when MEMORY drivers are supported.

The ASSIGN.SYS as printed above is very useful. That's because the NEC P printers support all these drivers and print in different resolutions.

19.3 The Metafile format

If been asked to count, what i don't know about Metafiles 8-)))

By the idea the Metafile format is quite simple. It's a recording of VDI calls (including parameters) made by a program.

A program making it's output via GDOS will open a Metafile driver instead of a printer driver (see 6.8) and the output will get there just as if it were a printer.

A Metafile reading program recreates this recording.

But the simplicity of this format is one of the biggest problems of metafiles because different GDOS releases exist and different drivers with different capabilities. So, one programs makes output being understood

by the GDOS actually installed. When this Metafile is read by a program running under a different GDOS with less or different capabilities, how can the recording be recreated?

Concrete examples:
The length of ptsin and intin fields is limited (different for different drivers) usually. The Metafile driver can handle this in another way. This can have influence to text output, poly line & marker, filled area and more ...

Next problem:
A font face not available on the output system is used. I which way another (most similar) face has to be requested by the program making the output?

At this point, this is a problem to be handled by the coders of the reading graphics programs (who willknow, what they're doing).

But when writing a metafile header you have to know, what you're doing. I don't but I'll give it a try ;-)

The resolution set for a metafile is a decision of the application. If there's no resolution set, 300dpi are used. That's a pixel width of 0.085mm

(Stef: that's not a pentium calculation, but *where* are 300dpi equal to 85 micrometers? On a 72dpi SM124?
Gerd: everywhere)

Screen drivers are only capable of handling raster coordinates. For metafile output the same routines are used, so I'll limit the next info to raster coordinates (even though metafile can handle NDC's). Those coordinates are defined from upper left to lower right.

To define a system of coordinates, metafile do this:

o (W)idth and (H)eight are set in millimeters (mm) via vm_pagesize. That's the (positive) difference beetween the lower right and upper left corner (which doesn't have to be in the origin)
o The rectangle (xmin, ymin, xmax and ymax) is defined in pixels via vm_coords. The way to calculate this rect. is found below.
o Here inside another rectangle is defined in pixels via v_meta_extents. It's got nothing to do with the system, the MF reading application get's info how to clip (what doesn't *have* to be done!)
Note: papyrus doesn't clip; kandinsky does, but it moves the graphic to the lower right a bit making miss a bit of it on the screen. So it could be useful to set the size for v_meta_extents a bit larger than the one for vm_coords.

This way the system of coordinates, the resolution (width and height of a system) has a fixed definition.

But the veriables set aren't the ones an application usually calculates with.
Here's an example what's to do, when the application knows the resolution wished (in dpi), the upper left (X1,Y1) and the lower right dot in tenths

of a millimeter (or a multiple of it).

Here's how to get the width and height of a pixel by the resolution:

25400
(Pixel height in tenths of a millimeter) = --------------------
vertical res. in dpi

25400
(Pixel width in tenths of a millimeter) = ----------------------
horizontal res. in dpi

(W)idth and (H)eight (in millimeters) are needed for vm_pagesize:

W = (X2 - X1 + 1) * (Pixelwidth in 1/10mm)
H = (Y2 - X1 + 1) * (Pixelheight in 1/10mm)

xmin, ymin, xmax and ymax (in pixels) are needed for vm_coords:

X1
xmin= --------------------
Pixelwidth in 1/10mm

Y1
ymin= ----------------------
Pixelheight in 1/10mm

X2
xmax= --------------------
Pixelwidth in 1/10mm

Y2
ymax= ----------------------
Pixelheight in 1/10mm

v_meta_extents is found the same way as vm_coords. To make Kandinsky
display everything, xmin & ymin can be set smaller and xmax & ymax larger.

Before making any output into a MF, first set the system of coordinates.

(In the early past I noticed, that my desriptions are that good, that even
I understood them <g> [Stef:I hope the translation is that good too])

Further informations:
Ulrich Rossgoderer coordinates a list of further informations to put
in a MF via v_write_meta (See version 2.4 of this FAQ). The Profibuch
[Jan92] the Atari Compendium [San94] and the standard book "Ueber
FIleformate [Bor94] contain further information. And every literature
about VDI calls is helpful, too.

20 Expanded Sub opcodes for metafiles

Metafiles have one important predicate: The reading application has to
ignore unknown calls. But it can use any sub codes that can be written in
a metafile by v_write_meta.

The information of this chapter once was created to be a standard, but, well it didn't get to be. Maybe it wasn't the time for it there were no SpeedoGDOS and no media to promote it.

The definition following now should at least be supported for *not* using sub opcodes for any other purpose. If *any* program uses this definition please send me information!!!!!!!!!!!!!

Here's an extract from the KandinskY manual:

Kandinsky uses the *.GEM format to save and load drawings - as noted several times before (i.e. the Metafile format).

This format can be (compatibly) expanded almost without any limit using user defined sub opcodes.

KandinskY uses some special sub opcodes, e.g. to save and restore fine grey scale setting, window positions and more. Besides sub opcodes I know are supported.

KandinskY's saving routines are coded in a way not recommending that another Program - loading a drawing created with KandinskY - doesn't *have* to understand these sub opcodes. There shouldn't be any difference in the display then. Problems can occur if a program makes a wrong interpretation of a sub opcode. That's because of value overlapping (sp?)

So, if you dear reader use your own sub opcodes too:
It would be great sending me (Ulrich Rossgoderer) a short description of them. Because the use of the extension only makes sense if sub opcodes of the same value are interpreted the same way by any meta file using program. I have a list in mind describing any used sub opcode with their meaning (like the XBRA list).

Refer to the Profibuch [Jan92] for more information about sub opcodes. They're mentioned in the chapter about VDI OS routines. Take a special look at the v_write_meta which is used to write sub opcodes into a meta file.

20.1 Supported sub obcodes

First here's a short overview about supported sub opcodes . Table 1 lists the names offered, their obligatory values the their results.

Name	value	short decription
GEM_START_GROUP	10	Group begin
GEM_END_GROUP	11	Group end
GEM_NO_LINE_STYLE	49	Switch off any line style
GEM_START_SHADOW	50	Object shdow begin
GEM_END_SHADOW	51	Shadow's end
GEM_START_FILL	80	Filled plane begin
GEM_END_FILL	81	Filled plane end
GEM_START_BGIF	170	BGI vector text begin
GEM_END_BGIF	171	BGI vector text end

```
| GEM_WIND | 190 |Window position, Zoom value etc.|
| GEM_GRID | 191 |Raster settings |
|_GEM_ALIGN__________|_192_|Reference object's informations_|
| GEM_START_GREY | 193 |Gray value begin |
|_GEM_END_GREY_______|_194_|End of it________________________|
| GEM_START_BEZIER | 195 |Bezier begin |
|_GEM_END_BEZIER_____|_196_|End of it________________________|
| GEM_START_JOIN | 197 |Following blocks are one unit |
|_GEM_END_JOIN_______|_198_|... from here no more___________|
```

Table 1: Sub-Opcode overview

The next subsections are a drscription of the functions listed here.

20.2 group information

GEM_START_GROUP marks the beginning of a group, i.e. a couple of objects belonging together. Their end is marked by GEM_END_GROUP

20.3 object shadow

The VDI calls between GEM_START_SHADOW and GEM_END_SHADOW are used to set are used to draw a shadow for the first object *after* GEM_END_SHADOW.

20.4 filling area

Borders around VDI planes aren't always drawn correctly. That's the reason for the existence of GEM_START_FILL AND GEM_END_FILL.
All VDI calls included are used to draw a filled plane with or without border.

As a description the drawing of a polygon with shadow and border is made step-by-step here:

o GEM_START_FILL
o GEM_START_SHADOW
o Setting filling attributes for the shadow
o v_fillarea(...) offset by dx and
o GEM_END_SHADOW
o Setting of filling attributes for the plane
o v_fillarea(...)
o Setting of line attributes for the border
o v_pline(...)
o GEM_END_FILL

20.5 vector text

GEM_START_BGIF starts text output with BGI vector charset. Here are the functions of the VDI arrays:

```
_____________________________________________________
| intin[0] GEM_START_BGIF |
| intin[1] 0: not proportional |
| intin[2...10] Name, z.B. EURO: intin[2] = 69 ... |
```

```
|_intin[11...]__Text with zero at the end__________|
| ptsin[0] The text's x-coordinate (in 1/10mm)|
| ptsin[1] The text's y-coordinate (in 1/10mm)|
| ptsin[2] Letter width (in 1/10mm)|
| ptsin[3] Letter height (in 1/10mm)|
|_ptsin[4]______Rotation______(in 1/10 of a degree)|
```

The v_pline(...) calls before GEM_END_BGIF are set if a program can't make use of these sub opcodes needed to display text.

20.6 window settings

20.6.1 window position

GEM_WIND sets position, magnification value and format of a window.

```
_____________________________________________
| intin[0] GEM_WIND |
| intin[1] The window's x-Position in pixels|
| intin[2] The window's y-position in pixels|
| intin[3] Window's width in pixels|
| intin[4] Window's height in pixels|
| intin[5] Slider's x-position in pixels|
| intin[6] Slider's y-position in pixels|
| intin[7] Zooming value in percent|
|_intin[8]__0:_vert. format,_1:hor. format___|
|_ptsin[...]_no entries_____________________|
```

20.6.2 raster setups

GEM_GRID permanently saves a window's raster setup.

```
_________________________________________________
| intin[0] GEM_GRID |
| intin[1] 0: Raster inaktive |
| intin[2] 0: don't draw raster |
| intin[3] Rasters' width in 1/10mm |
| intin[4] Raster's height in 1/10mm |
| intin[5] help line's hor. distance in 1/10mm |
| intin[6] help line's vert. distance in 1/10mm |
|_intin[7]__0:__help lines_,_else:_help_dots_____|
|_ptsin[:::]_no_entries___________________________|
```

20.6.3 reference object

GEM_ALIGN describes the reference object

```
_________________________________________________
| intin[0] GEM_ALIGN |
| intin[1] 0: don't show reference object (RO) |
| intin[2] RO's x-coordinate in 1/10mm |
| intin[3] RO's y-coordinate in 1/10mm |
| intin[4] RO's width in 1/10mm |
|_intin[5]__RO's height_____________in_1/10mm_|
```

```
|_ptsin[:::]_no entries_____________________________|
```

20.7 gray scales

Here are the calls to set a gray scale for to fill an object. Values between zero to 255 (white to black) are possible.

```
_______________________________
| intin[0] GEM_START_GREY |
|_intin[1]__Gray scale, 0-255_|
|_ptsin[...]_no etries________|
```

A user defined pattern with the gray scale set is set between GEM_START_GREY and GEM_END_GREY. Again they're only set for programs unable to handle these sub opcodes.

20.8 beziers

A bezier is defined with GEM_START_BEZIER. All informations are found in the intin and ptsin fields.

```
_____________________________________________________________
| intin[0] GEM_START_BEZIER |
| intin[1] recursion's depth <5!! |
| intin[2..2n + 2 - 1] anchor point's attributes |
| corner: Bit 0 set |
| moves: Bit 1 set |
| visible: Bit 2 set |
|_____________________Line_instead of bezier:__Bit_3_set_|
| ptsin[0..4n - 1] The n bezier segment's coordinates |
|_____________________four points each_____________________|
```

Guess what? Yeah, the v_pline calls until GEM_END_BEZIER is set draw a polygon for programs unable to handle these sub opcodes (Stef: hmmm, good thing to think of those old fashioned programs <g>)

20.9 VDI block summarizing

To save more coordinates than allowed by the metafile driver GEM_START_JOIN is used. If KandinskY discovers this sub opcode, the ptsin fields between ..START.. and ..END.. are used to summarize the following VDI blocks to a large field

```
_____________________________________
| intin[0] GEM_START_JOIN |
|_intin[1]__total of coordinate pairs_|
|_ptsin[...]_no entries_______________|
```

This definition can be used - besides v_pline, v_fillarea and v_pmarker - for v_gtext, v_justified and v_ftext too yet.
Text longer than one line can be saved this way too. The following definition is used then:

```
_____________________________________________
| intin[0] GEM_START_JOIN |
| intin[1] value of following v_gtext calls |
|___________(one each line)_____________________|
|_ptsin[...]_no entries_____________________|
```

The first VDI output call following GEM_START_JOIN is used to mark this further definition of intin[1].

Well, so much for this extract of KandinskY's manual.

22 Miscellaneous

22.1 Critics

22.1.1 Critics to the author

Critics are greatly welcomed. To get more info, send email to:

G.Castan@physik.uni-stuttgart.de

Possibly one writing me has already tested two or three drivers.
Please write me if the errors listed above occured or not.

Anybody knowing different driver support addresses, please write me an
email.

22.1.2 Critics to the translator

Hi, this is Stefan writing :-)= (Huh? Yeah, a goatee)
Why I wrote this translation? In the former versions of this FAQ I
claimed not to know the reason exactly. Well, it's quite obvious:
Support the TOS fans all over the world (hmm, at least those
understanding *my* English*)
If you find some errors in this translation, please don't send them to Gerd
but
to me:

cookie@cookie.syd.de

Referring to the feedback on this translation there seems to be ANY error in
it.
It would be interesting to me, WHO is happy with this FAQ, so send me
postcards, discs, books, whatever you want - no mail bombs please ;-)))

Thank you and have fun and lot's of experience with this FAQ.

Bye
Stefan

22.2 Praise

If this FAQ helped you out of a problem, please write me a postcard in your next holidays.

Postcards I received yet: 1

22.3 For my support

Due to actual experiences I ask the distributors to switch on verify when copying update disks.

I only know two distributors not making any problem with this.

Does one of the readers want to code a Speedo font editor? We (Gerd & Stefan) offer our time to beta test it ;-)

22.4 Trademarks

This document is full of trademarks, no to be used freely.

22.5 Guarantee

I'll offer no guarantee.

23 Literature

[Whe88] Douglas N. Wheeler,
EVERYTHING YOU EVER WANTED TO KNOW ABOUT GDOS (AND MORE)
(Internet, Filename: GDOS.ARC oder GDOS.TXT)
Here's written all what's important to know about GDOS drivers.
(AND MORE)

[Jan92[Jankowski, Rabich, Reschke
Atari Profibuch [Professionals book]
10. Auflage, SYBEX, Duesseldorf (1992)
The Standard. For Coders: In the VDI part you'll find how to use screen and printer drivers correctly.

[San94] Scott Sanders,
The ATARI Compendium, first revision, SDS Publishing,
Long Beach '94
Another standard. More actual compared to the Profibuch (VDI calls up to SpeedoGDOS 4.2) and very complete. The official GEM useri nterface guidelines are included too! But it can't replace the Profibuch.
A plus is the list of operating system functions, from which release they're available and which way their existence can be requested. If this FAQ ever will have a chapter about layout, this book will be an example. A negtive one, though.

[Gar93] Marc Rene Gardeya
VDI fuer jedermann [VDI for everyone], ST-Computer 10/93

MagiCMac doesn't run on Power Macs. According to the distributor a Power PC
version is planned for this summer.

Are your partitions smaller than 512 MByte or do they exceed the 512 MByte
limit? Only TOS 4.0 or MagiC can handle partitions > 512 MByte. With
partitions between 256 MByte and 512 MByte you have to make sure that the
sector size doesn't exceed 16384 bytes otherwise it won't work. Some
harddisk tools (e. g. SCSITOOL or HDDRIVER) offer options for this.

Acorn machines? Linux or SCO on PCs? Solaris, BSD Unix or whatever on
your second-hand workstation of choice? Mind you, I know some people with
Vaxen in their basement so maybe my definition of a home computer differ
from that of the majority.

Personally, W95 hasn't impressed me at all - horses for courses, maybe?

> A RISC based Amiga would be interesting. It could also be the one

Why should people who are happy with Wordworth 3 want to change to Word 6?
Speed? I doubt it. Cheaper on resources? Hardly. Cost? Nah. Because it
comes with lots of whizzy bits which they're almost certainly not going
to use and which just increase system demands and instability? Possibly.
Because the media (both specialist and general) see PCs running DO$/Windoze
as the answer to the world's problems - or, if you're really bohemian, you
might buy a Mac. If you tell the uninformed masses that they need x86 PCs,
DO$/Windoze, Word, Excel, Access etc then they'll believe you.

Mind you, let's see how the PC card for the RISC PC affects ARM-native software sales. Given that Acorn software is cheaper, smaller, faster and (often) more robust, it could be interesting.

Sadly, it is the case that the PC is, at the moment, the optimum gaming platform. But for how long. If you want to play games, wait a year and buy a Jag, a M2-based 3DO, a Playstation or a Saturn (at UKP150-300) and keep your conputer platform of choice.

> This is providing they do actually make a RISC based Amiga of course, the
> incompatibility problems would be incredible

PowerPC anyone? Power Macs run most useful Mac software. Furthermore, it is (I hope) common knowledge that the P6 will be the last generation of Intel processors to be even vaguely rooted in the 8086 architecture. P7 will almost certainly be based around VLIW architecture which Intel are developing with HP. Like the PowerPC, all current PC apps will have to run under software/firmware emulation.

> Atari and

Craig. Graham (Craig.Graham@ncl.ac.uk) wrote:
: |> an RGB and not a VGA? How about Obsession.. same there too. Don't you

: Bad example, Obsession (as with the follow-up Substation) work fine on
: VGA monitors (well, SVGA).

Doesn't work on my VGA. hence my reason for listing it. Like I said
making a demo SVGA compliant is perhaps not so hard, but making it VGA -
well, I wish they would, but I'm not sure if they could.

: Now, if they were real coders they'd be finding ways around this (like
: the old overscan and switched mode tricks on the ST - remember GFA Raytrace,
: it displays two res' at the same time (ST-Low for the image, ST-Medium down
: the RHS border for the menu)).

Did it really? Or was it just an 'illusion'? I don't remember using the
package very much to be able to remember.. sounds pretty cool if it did!!

: |> I know you have a very nice and powerful monitor, I only have a very
: |> basic VGA (note the lack of 'S' infront of that) and an RGB. I'm sure

: Hmmm. Richard, you should have bought an SVGA, I payed 139.00 for mine
: brand new, and it works with most stuff (although not all, by any means).

Ah yes but mine didn't cost anything (got it free because they were
clearing out at my Dads office), its not a bad monitor at all, it
certainly beats using a TV or RGB, but it really can't handle demos too well.

I wish to know is there a new version of Ghostlink? I have version 1.02 beta
(dated 2/5/94). Author claims that future versions will probably have
option for parallel port...
^^^^^^^^^^^^^
Does anyone knows e-mail address of Bitz software or author?
Or maybe some other software to connect with PC via parallell port?

Thanx,
Loris

A need for speed.

: OK - can the TV port but keep the cart. port (essential for Cubase, Logic
: et al.) Ditto w/ SCSI and IDE - IDE drives are only slightly cheaper
: than SCSI and the ability to put a decent amount of hardware (hard drives,
: removable drives, CD-ROMs, scanners, samplers etc) onto SCSI makes it *far*
: more useful.

How about having general expansion ports instead and plug any devices
into that instead - no cartridges sticking out of the side. Some old
software would not work, but then again new software would.

: > puts SIMMS in the STE, everyone loves them, then reverts
: > to its own system for the Falcon. System should be able
: > to support 2,4,8 and 14 meg configurations.

: Yup.
I think you need to be able to support -alot- more than 14MB,
especially as more people use Linux and MultiTOS etc. (albeit not
like a certain Roger). There are a number of Linux machines I know
with 48MB of memory.

: > 32KHz 030.

: And keep the main board running at 16MHz w/ cache? Or upgrade the whole
: thing?

New board, 32MHz bus, 32-bit bus, 64K cache (or thereabouts).

: > 299 UKPS

: Yup.
Hmmmm. Many PCs being sold these days cost alot more - like £800-£900
+VAT, about 1000 pounds in total. They do include decent programs
though. Why not make a decent Falcon for about this price. For those
people with hard disk drives etc. it would be slightly cheaper.

> can get out from a humble 68030-16 and 4 megs of RAM =-) !

Trust me AES 4.1 can be optimized A LOT!!!
It's not only that it's programmed in C, it's the hole way the routines are designed. Take LiNUX for example - It's quite faster than MTOS on a standard 16 Mhz 030 Falcon.
The 68030 at 16 Mhz is perfectly capable of multitasking, the Amiga runs multitasking quite well even on a measly 68ec020 at 14 Mhz and the response from hitting a key or clicking the mouse is just fine.

You see it's not really the speed of the CPU that is the essential part, MTOS for instance - uses about 25% of CPU time JUST to switch tasks - that's OVERKILL if you ask me. Besides it`s screenhandling routines are VERY slow indeed, could be made faster too.

When running one application at a time in MTOS already goes about 25 % slower than under normal TOS, that shouldn't be the case - what is MTOS using all this processor time for ?

> MTOS, btw, can copy disks as a background task - but one has to install a
> new copier program to replace MTOS's own routines. Haven's tried it
> much, but is't supposed to work.

Haven't tried it either. It's just that either E-Copy or any other copier I've tried works properly in the background under MTOS.

If somebody has a good idea of how to make it work -please tell.

Keep Cool and Flying...

ChainXOR...

>I also need to know what flavor of SIMMS I need to upgrade from 1 to 2 megs
>on this 1040 STe.

Some hard drives used to plud straight in. Now you'll have to get a SCSI hard drive, a case and power supply for it, and a SCSI adaptor. I'd recommend the ICD Link 2 adaptor, which works with just about any hard drive, and just sits between the ST DMA cable and the SCSI port, with no extra setup or cables.

I *think* the STe takes 36 pin SIMMs, but don't take my word for it.

If you want to check out prices etc. for hard drives etc., I'd recommend Toad Computers, who have a web page at 'http://www.charm.net/~toad/'.

>And, I want some old psygnosis games!!

Well, I can't help you there, sorry.

: Distribution:

: Ok, I don't know how I did it, but I know how I did it, but I managed
: to program a fighting game (like SF or MK) using GFA Basic 3.07. I'm
: planning to use other optimization techniques on the program later, but for
: now I have a problem:

: 1)My background is stored in a string like h$.
: 2) The characters are also stored in strings, dude$
: 3) I use a page flipping techique.

: Whenever the characters are drawn over the background, I use the
: PUT x,y,dude$,[mode] command.

: The problem is that I've tried all the modes and I still cannot
: achieve transparency while keeping the source pattern unchanged. The closest
: I was able to come was using mode 7, which gave me transparency, but the
: background under the character showed through.
: In other words, while I didn't have a big black square around my
: fighters, the fighters themselves had weird colors (I suppose from combining
: with the background).
: Can anyone help me?

What you need to do is create masks for each of your characters. If you
are using CrackArt, there is a MASK feature in its special effects menu.
A sprite mask is basically this: Anything that is colour 0 (background)
gets turned white. Anything that is >colour 0 gets turned black. What
you end up with is a sillhouette of your sprite on a white background.

Then, what you have to do is get the masks as well as the sprites; store
them in a separate array, like dude_mask$. Store them in the same order
as dude$ for ease. Then you have to put the mask down first using mode
1, and then your sprite, using mode 7, like this:

```
PUT x,y,dude_mask$(number),1
PUT x,y,dude$(number),7
```

Presto! No more black box around your characters! The drawback is that
it nmow takes twice as long to draw your characters... sadly, this can't
be avoided. If you need more help, I am very experienced in GFA,
particularily where programming graphics and games are concerned.

: This is my first game-type program using GFA. The game so far runs
: at a moderate speed, and I'm sure I could speed it up once I learn more about
: the language and techniques, but I can't get past this problem.

:

: -Thanks in advance,

: Dan.

: of you would suggest, but I'm still trying to figure out Basic!

>that will do true multitasking. I know. I have one.

If 'true' multitasking is preemptive multitasking, then the following home computers can use the following OS's:
* Amiga: Okay, it had it from the start
* Atari ST,TT,Falcon + clones: MiNT
* Atari TT,Falcon + clones: Linux 68K
* IBM PC 486 etc.: Linux, FreeBSD, Windows NT, OS/2
* Apple IIgs: GS/OS with GNO
In addition, the Apple Newton does preemptive multitasking :-).

>I can and do have 4 or 5 programs up at once plus about 10 or 11
>small utility programs that always load and are running.
>All on about 3 megs with a bunch to spare. (I have 6 Megs)
>When I get on line I have running:
>
>A Terminal program,
>DiskMaster II (Dir management prog)
>Final Copy II (fine Word processor)
>Power Snap
>Quite often a DataBase program.

I don't have as much memory, but with MultiTOS, a hard drive and that much memory I could do that on my ST.

>All while on-line via the Terminal program.
>while I'm down-loading a file I can do other things instead
>of having to wait. For example. If the HD partition is getting full
>(while downloading) I can go in and delete or move unwanted
>files to make room for the downloaded file.

Even before MiNT there were programs that would do that.

>The Amiga lives and will soon be in production once again.
>A new Power-PC based Amiga is the next-gen to come.

Funny, that's what I heard about the ST.

>Amiga has it's roots in Atari. Atari could have had Amiga (around 1984)
>but didn't take it up. They invested money into it's development
>but blew the chance to own it and they realy did want to.
>Too bad for them. %:^)

Well *I* heard that the Tramiels took the Atari ST from Commodore to Atari with them.

>I like my Atari and I like my Amiga. I have owned a PC, I have owned
>a Mac. I didn't keep them. I'll keep my Atari and I'll keep my Amiga.

Okay, anyone who keeps their ST can't be all bad. In no way would I condone owning an IBM clone. A Macintosh would be nice, if only for the amount of software available. Maybe I'll get one when Olivetti start selling them.

This whole article should probably be in one of the advocacy groups.

4300. MS Word 6 to Atari Works (RTF)

Newsgroup: comp.sys.atari.st
Date: 1995-06-08 00:00:00 UTC
From: mbecroft@iconz.co.nz
Message-ID: <3r6411$guk@status.gen.nz>
Source record: 164146

I have written a document using MicrosoftWord revision 6.0b (or was it 6.0c? Something like that.)

I exported it from MS Word 6 as RTF, and loaded it into AtariWorks 1.207. However, the 10pt text came out in AW as about 50pt. And it was all Bold! In the original Document in MS Word, all text was 10pt exept a 50pt or so title. Everything was *not* bold excepting a few subheadings.

Any help on the matter would be much appreciated.

-Mario Becroft (mbecroft@iconz.co.nz)

How did you get that figure? My own measurements with MiNT 1.12 and AES 4.1 have given quite different results. When process priority was set to its maximum, the difference between TOS 4.04 and MTOS was only about 3%..8%. Some graphical operations were even faster using AES 4.1 than when using TOS 4.04 ! Sorry, can't remember details - my Falcon is about 12.000 kilometers away from me ;-(... The only really dramatical difference was in window handling; there MTOS is much slower.

Funny (or not), but older MiNT versions are faster than the current 1.12. And speaking of this, has anybody compiled a REALLY good, working 68030 optimized version of MiNT 1.12 or MHMiNT 1.12..? I'm tired of playing with GCC (without proper C-knowledge), and compiling dozens of MiNT-030 versions that work _almost_ well... =-(I'd be happy, if someone could upload one to umich, cnam, or hensa - or if that's not possible, directly to me =-) !

Cheers,
Tommi

|>
|> I don't understand -- what's the difference between a VGA and an RGB
|> monitor? Isn't RGB supposed to be more flexable? And what coding
|> diffrences need to be considered?

The difference is basically that VGA has a higher refresh-rate than RGB, normally
71Hz compared to RGB's 50 or 60Hz. This causes problems when the demo is timed
to the music, as the graphics will run to fast (Or too slow...) on a VGA compared
to a RGB. RGB-monitors are more popular among demo-coders because the lower
refresh-rate allows you to do more between the syncs.

Hello dear Atarians.
After a very long silence, I have uploaded the latest versions of Backward.
They are currently available at atari.umchi.edu

New Backward II version (V2.83) with french, english, german and sweedish translations.

First Backward III release (with same translations). Backward III is a resident program (whereas Backward II was an external utility). It still increase compatibility, but also patches Falcon TOS bugs, and allows you minor configuration (like disabling IDE).

Please test them.

Cyrille Dupuydauby (dupuyda@ibm.net)
Author of Backward.

BJ> find it?

Actually the program on GENIE is a demo which has limited functions.
The full version allows you to access the graphics and sound of the
M.O.S.T. CD's whereas the demo just lets you see the text. The demo
should be on most BBS's that have Atari programs and there is a file
in the demo package that has an address where you can order the full
version. I have the file in our computer club if you cannot find it.

>diffrences need to be considered?

A lot! RGB and VGA have different horizontal, and vertical frequencies.
sVGA has a wider range of frequencies than VGA. With an RGB monitor,
>- 400 pixels vertically is only possible with interlacing, where as
VGA does not require interlacing for this (in fact, each line is displayed
twice for < 400 vertically.)

Both monitors have their advantages and disadvantages... Multisync's which
are able to act as both types are better (but more expensive!)

Because the scan rates are different on the two different monitor types,
any routine that hooks into the VBL/HBL (demos!!) perform at different
speeds. Also, as with a VGA lines may be sent twice (in < 400 vert) the
bus load is higher, leading to slowdown.

Other considerations for coding is different screen sizes, different
max resolutions, and different values in the video registers to get simular
modes...

This all adds up to not many demos compatible with both monitor types...
and the same goes for games... ;(

> The hard drive has many of the best ST software packages pre-
> installed including Caligrapher, Atariworks, LDW Power,
> WARP 9, SpeedoGDOS, as well as many popular games, etc.

If you are including all the original documentation and floppies of the software that is installed on the hard drive, then you should make that fact well known in your for sale ad, otherwise you will be mistaken for a scum sucking pirate that has no right to post such drivel in a public newsgroup forum.

In your next post you are advertising Caligrapher Gold and Warp 9 for sale. Wow! You are a lucky person to have -TWO- legitimate copies of these titles. I mean, you -must- have two copies if you are selling one and another goes with your hard disk drive, right? Lucky, lucky, lucky. And of course, all those games for sale are NOT the same ones you have on your hard disk that you are selling. That wouldn't be fair, would it?

Thanks goodness you are NOT a low-life, scum sucking pirate, eh?

Sheesh! And some people wonder why developers don't write more Atari s/w.

Hi to all!

ASH officially released MagicMac for Power Macintoshes. They claim this
version to be twice as fast as a TT on average on the slowest Power Mac
machine (6100). Expect great performance on the 604 modells and the new
PCI Macs then :-)
The version costs DM 299 (as opposed to DM 249, AFAIK, for the 68k version).
A license for poermac version for 68k version owners is sold for about DM 99.
I think this is good news :-)

Regards,

Alfred

>Have I said something daft? Can it be done? How?

Oh, Linux! You seek Linux (in my best Yoda voice).

Linux is a unix-like system which does X. Motif, on the other hand, is
commercial and I don't think it has been done for the m68k version of
Linux. They do have it for the PC version, and all that would be required
is to compile it on a m68k version. This is not likely to be done, though.

That said, just about everything else non-commercial should be able to
compile nicely.

>I have some UNIX and would like to set up a unix-like system, but is it
>possible to run gem applications?

No gem here, so no gem apps.

>where do I go to for an easy-to-set-up unix-like environment.

Various people make (myself included) have made statements as to the varying
degree of "easy-to-set-up-ness" of various systems. I found it easy. I have
talked to others who have used the same files and same instructions I did and
still do not have their system set up.

Keep in mind that I have 8 years unix experience as a *user*. I had 0 years
expericence as a sys-admin. Which means that I know the commands and tricks
and such, but I know (knew) zippo about setting things up.

FreeBSD is also an option, but others will have to fill you in on that
project (stability, X support, etc).

4326. ST Monitor Cable Problem

Newsgroup: comp.sys.atari.st
Date: 1995-06-09 00:00:00 UTC
From: sonicsin@aol.com
Message-ID: <3ra2rf$205@newsbf02.news.aol.com>
Source record: 164020

I am building a switch box to hook up my 1040Ste to an NEC Multisync 3D monitor. Rather than buying another 13-pin DIN cable, I just cut off the cable from my SC1224, leaving exposed wires on one end to solder to a 15-pin D connector and hook into my switch box. The only problem is that, using a continuity checker, I can not seem to find a wire corresponding to RGB-Blue on pin 10 of the connector. Does anyone know what may be the problem? The SC1224 is a Goldstar type monitor made for Atari.

Yes there is. You'll need a suite of programs such as Semper, IOSMail and
LED.

You can speak to Daron Brewood (at the address Danny mentioned) or Kev
Osborne at (I think) kevin.osborne@fortress.mettav.exnet.com who handles
registrations and support for both Semper and LED.

Thats why it can give problems on a Falcon as well as a Link adaptor, (i
think). On my ADSCSI+ adaptor it works with or without the parity enable.

Never mind a 50 page doc, I couldn't compile a _4_ page doc because poxy
dos is limited to 640K memory. It ran out of memory on the first page!

4341. Re: New C-lab Falcons, anyone have details?

Newsgroup: comp.sys.atari.st
Date: 1995-06-09 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <RW+fV-P.lmcclure@delphi.com>
Source record: 164035

How about these suggestions for a low-end Falcon:

* Memory: Either use standard 32-bit (72-pin) SIMMs, or redesign the machine to accept a "bellyboard" for memory expansion, similar to the A1200. In an ideal world, the machine would have 2 megs onboard, and an expansion board could provide for three one-meg SIMMs, so that the machine could be expanded to 14 megs with no waste.

However, this would mean a redesign of the Falcon memory controller, and thus would violate the low cost principle.

* CPU: Since very few programs actually make use of the MMU of the 68030, if it would help cut costs, drop down to a 68EC020. Since the Falcon already uses a 24-bit address bus, no loss would be incurred here. If the CPU could easily be disabled so that an accelerator could be used, all the better. (Remember folks, this is supposed to be low-end...they gotta trim something).

* SCSI: If it adds significantly to the cost, make it an option that can be added later, but do not eliminate it altogether.

I am not suprised, lectures frequently dont know half as much as we assume they know. I am glad I never went to any of the C courses at uni - I probably know more C than I would have, and am sure I am better programming it. Please point out to such people that they are wrong, ANSI is there for portability, borland is there for PCs only......

Unfortunately these lectures are training the next generation.............

General! We have intercepted a coded Imperial message from the J Greenhalgh system!

LJG> To upgrade the main board something has to be done about the
LJG> blitter, apparently you can't clock it above 20Khz, and with faster

This is true.

LJG> processors you end up with the situation that the processor
LJG> outperforms the blitter on every fuction rendering it useless, Im

Only where GEM's use of it is concerned. It's still highly capable for bitplane-based work.

LJG> surprised that the Falcon blitter isn't better than it is, should
LJG> be relatively simple chip to design?

The Falcon Blitter is pretty good - it's just completely unused by programmers. It's also badly implemented as part of the OS graphics primitives. This is why it appears slow.

LJG> If C-lab start selling Falcons with graphics cards people are going
LJG> to be paying for 2 graphics subsystems one of which needs a major
LJG> overhaul.

The Blitter is useful for many things other than writing to graphics cards, even if this was the case. You can do all sorts of tricks with auto-defragmenting memory management systems and it's ace for building up bitplane graphics in memory (vector programs etc).

It's a pity everybody ignores it.

Doug.

I too had keyboard problems. I had reset the Falcon ROM and used
the wrong keyboard configuration. I forget now if it worked better
under the UK or the US setting, however, I was not using TurboC.

Do they actually make 68030's that SLOW? (Yes I knew you meant MHz).

I'd have bought a Falcon if it was an '040 machine with at least 16MB of RAM.

Being a graphics machine, where you need a LOT of processing grunt (a 16Mhz 68030 doesn't have enough to satisfy my need to chuck around many megabytes in RAM quickly) and the screen takes up part (or, in the case of current Falcons, all) of your RAM, I do NOT know why they released a memory-deprived 1MB and 4MB models - they should have started at 8MB.

(My TT has 20MB now, and it's just "comfortable" - any less and I'd be screaming for blood).

Is not knowing the same as being a pratt?

I have read several threads about linux, minix partitions, mint etc... and
would especially like to see something resembling xwindows or motif on my TT.
Have I said something daft? Can it be done? How?

I have some UNIX and would like to set up a unix-like system, but is it
possible to run gem applications?

where do I go to for an easy-to-set-up unix-like environment.

All help gratefully received.

Its a tolerance thing... Obsession is probably forcing it beyond the
official standard 'VGA'. Some monitors are able to cope with this, others
aren't... Unless the program sticks to the specified operating frequency,
it cannot be said that it will work on all monitors...

Yes, I've had the same sort of feelings here. There are plenty of
people here on the net, but it is still fairly rare to find someone
who is willing to share their knowledge and ideas quite so freely and
be so consistantly credible with it. Hendrik appeared to be one of
those few who did know what he was talking about almost always, and
also was willing to share his knowledge and experience in a wide range
of areas. I know I will miss his contributions greatly.

If anyone out there is in contact with his family, please pass on our
best wishes and thoughts to them.

>stuff like this out there ?

There is. You will need one of each of these.

Message Reader/Editor:
LED (was freeware now shareware)

Message Tosser:
IOSMail (Freeware)
Jetmail (Shareware)
ECU/Llegada (Freeware)

Fido Mailer:
BinkleyTerm ST (Freeware)
Semper (Shareware)

To find the latest versions, it is probably best to get them from an
Atari Fido BBS or one connected to NeST. If you can have FTP access
the best site with I have found with Atari Fido directory is
ftp://ftp.uni-paderborn.de/pub/atari/tools/dfue/fido where spme (not
all) of the above is available.

I have run a point system succesfully using LED, Binkley and IOSMail
and have also tried using ECU/Llegada.

I hope this helps start you off.

: equipped with the same type)

Not true. The ST uses no parity, and simply ignores the 9th bit if
it exists. I've had 4mb in my 520STe: two 8 bit 1mb and two 9 bit
1mb.

> huge memory models. (and no fancy C++ comments // :-)

Okay - so I phrased this a bit unclearly.

What I meant to say was that although he thinks he is writing standard C,
his code is littered with Borland specific stuff. When I point these out -
his normal response is that thats what his lecturer told him to use. He
seems unable to distinguish between the C language itself - and the Borland
specific libraries.

Everything else you say I agree with though :-)

Personally I try and write very portable code. Its an investment on my
time - as I may sundenly find myself programming Macs or Suns etc - and
I don't want to have to relearn anything more than the development
environment.

Roland.

The ICD hard driver shouldn't be to old for the Zip drive, (although it may
be that there is a change between the PRO and the non-PRO version which
regards this matter).
As for your CDROO, you need a CDROM driver such a MetaDos or ExtenDos.
MetaDos you can get for free, ExtenDos is commercial.

Hi there fellow Atarians
I am looking for a programme called Schoenberg. It is a shareware algorithmic music programme. It was released by Melville Marriot Music Systems.

I saw a quick reveiw of it a while ago in an ST magazine. Does anyone have a copy or know of anywhere that does ? I have tried asking archie to no avial.

Thanks for any help you can provide in finding this intersting looking prog.

Say Hi,

M>like it supports minix
No, still 8+3-convention...

Fact is, that Kobold3 has 'sizeable' file-lists, can handle up to 20 F-Keys
for performing any jobs/scripts, has an 3D-look (if 16 colours or more are
avaliable), now reacts correctly on drag&drop and supports any GDOS-Font
within the file-lists.
[IMHO no dramatical new features compared to V2.5... minix would be fine,
a file-tree like the windows-version too!!!]

CR>The short answer is no.

The short answer is YES! There is an agreement to use a 68030 emulator source code that was developed by Apple Corp. for later MacOS versions.

thomas_tempelmann@m.maus.de just announced in ATARI.NEWS the new demo version of MagiCMac 1.2 that will run on PPC:

Programmname: MagiCMac Demo Deutsch

Version: 1.2

Typ: Betriebssystem

Status: Demo

Kontakt: Thomas Tempelmann @ M

Ben. Hardware: Macintosh mit 68030, 68040 o. *PowerPC*

Download: MAUS M (089 1236567),
MAUS HH2 (089 52682040),
MAUS ASH (06221 303671),
bald auch im Internet per ftp.

Archiv(e): MMDEMO12.SIT 533KB (MacBinary-Format)

Kurzbeschr.:

MagiCMac ermoeglicht es, Atari-Programme auf Macintosh-Rechner zu benutzen. Die Geschwindigkeit liegt dabei in jedem Fall hoeher als beim Atari TT.
Die Demo-Version laeuft 15 Minuten.

(MagiCMac enables Macintosh computer to run Atari programs. In every case speed is faster than on an Atari TT. Demo version runs 15 minutes).

bye, Volker

Suzy B Software DOUBLE CD SET Now Available!

This TWO CD set is the most complete collection of Atari PD and
shareware software ever assembled. For the past 5 years, Suzy B's
Software has been the premier supplier of Atari public-domain and
shareware software, selling it to customers on individual 3.5" disks.
Their experience has paid off. There's no fluff in this collection --
just tested, up-to-date programs and files.

What's on here? Games! Falcon030 software! WAV's, AVR's, and
MOD's! Utilities! MiNT and MiNT files! Spectrum 512 files, financial
software, Atariworks templates, software demos, telecomm software,
childrens' software, databases, picture manipulation tools, label
creation software, Double-Click software, Atari Eight Bit files, printer
drivers, icons, boot utilities, screen savers, MIDI song files, pictures
from NASA, hard disk backup software and MUCH MUCH MORE!
Suzy B & Toad Computers 2 CD Set: $59.00! (Dealer Inquiries Invited!)

TO EVERYONE WHO PREORDERED THE SUZY B SOFTWARE DOUBLE CD SET THROUGH
SUZY B SOFTWARE OR TOAD COMPUTERS: Thanks!

Your orders were all shipped on May 26th and you should be
receiving your discs momentarily!

This has been ONE HOT SELLER -- and understandably so. It's
packed with programs and files in an organized & easy to use fashion. Who
wouldn't want it? And with over 1GB of files on this disk, you're getting
software at the BULK PRICE of just 5 CENTS per MEGABYTE! WOW!

To order this or any other product, please call
Toad Computers at (800) 448-8623!

4376. Imagecopy 4.0CD

Newsgroup: comp.sys.atari.st
Date: 1995-06-10 00:00:00 UTC
From: David Troy <toad@charm.net>
Message-ID: <3rcj7e$n2o@canton.charm.net>
Source record: 163958

```
NEW IMAGECOPY VERSION: ImageCopy 4.0CD
--------------------------------------

If you've been planning to buy ImageCopy 3.5CD, DON'T! Now, for a
limited time, get ImageCopy 4.0CD for the same price. ImageCopy 4.0CD is
being released this week and includes the following additional features:

- Page layout option: multiple images can be arranged on a page using
the mouse or by typing coordinates, and pages can be printed and/or
saved for future use. Individual images can have thir own color settings
and can be freely moved and resized (as in a publishing program). This
option can also be used to do color DTP work by overprinting output from
a monochrome publishing program.

- Interactive screen catalog option: this displays thumbnail miniatures
of images which can be clicked on to view, print, or convert the
original images.

- ImageCopy can be used by other programs to print images.

- The ability to load images with incorrect file extensions, and an
option to rename these files with their correct extensions.

- Faster LZW decoding: GIF and LZW TIFF images load three times as fast
as before!!

- Faster random dithering: the default (Floyd-Steinberg) option is
nearly three times as fast as previously.

- Faster color mapping.

- Improved timesharing with other programs. ImageCopy's print routines
detect when the printer buffer is full and allow other programs to use
this time. More time is given to other programs by 'task priority'
option.

- Ability to print PRN files.

- New (read-only) image formats: MTV Raytracer (.RAW or .MTV), TMS
Enhanced Simplex (.ESM)

- Option to save interlaced GIF images (great for those of you setting
up World-Wide-Web sites -- we use this to convert our GIFs to this
format!)

- Option to select and save transparent colors in GIF and IFF formats
(supported by GIF 89A format and looks great in World-Wide-Web documents
too!)
```

- Images can be copied from programs which change screen resolution.

- "Scatter" dithering option.

- Option to change image resolution (dpi).

- The pop-up image menu contains a "print" option which can be used to print the image as it is displayed on the screen.

- There is an "Auto Select" video option for video cards that are not directly supported.

- Choice of thumbnail sizes.

- Pop-Up menus can be displayed using the left or right mouse button.

- Clicking the right mouse button on a window title bar causes it to be moved behind other windows on screen.

- Improved monochrome print density option.

- Text and filenames can be printed when printing IMG files.

- "Fix TOS arrow bug" option for scrolling accessory windows.

- Reset Printer option in 'print layout' dialog.

- "Normal" orientation option.

- Improved "close windows" option.

- 'Disable Warnings' option in 'System Preferences' Dialog

- Option to sound bell after multiple file operations or for feeding paper into the printer.

- 'Cycle' option in pop-up image menu.

- Additional predefined page sizes.

Boy -- that's a lot of stuff! How can you get all the great features found in ImageCopy 4.0CD? Just buy it; or upgrade from ImageCopy 3.5CD! Here's how:

IMAGECOPY 4.0CD NEW VERSION AVAILABLE 06/09/95
If ordered before 06/30/95.....$39.95
If ordered AFTER 06/30/95.....$49.95

IMAGECOPY 4.0CD UPGRADE AVAILABLE 06/23/95
You must own ImageCopy 3.5CD to use.....$15.00

NOTE: ImageCopy 3.5CD & 4.0CD DO NOT REQUIRE A CD ROM DRIVE AND DO NOT COME ON CD. THEY ARE SHIPPED ON STANDARD 3.5" 720K DISKS. Why 'CD' then? ImageCopy 3.5CD & 4.0CD read and write Kodak Photo CD files! Finally -- a great way to use Photo CD with on your Atari and just about any publishing program!

Looking to purchase a Falcon or TT030 with no less than 2-MB RAM and 40-MB hard drive. Will consider paying up to $300 for the Falcon or $400 for the TT030, provided they are in excellent condition and includes all manuals and cables.

No flames on my pricing, please. I know that new Falcons go for the absurd price of ~$800 and new TT030's go for the even more absurd price of ~$1300, but considering that I can buy a complete 33Mhz 040 Macintosh with 4-MB RAM, 250-MB hard drive, fax/modem, keyboard, mouse, 14" color monitor and about a dozen software packages (plus the comparatively immense amount of third-party support) for $1200, there's no way I can be convinced that the anemic Atari 16-bit machines can have a justifiably high price.

It depends on, whether Macintosh is a real alternative to you, or not..
For you is apparently is, for some others it isn't. Then, if you want to
have an Atari (even an "anemic" one..), you're willing to pay more to get
one. I don't think those computers are very comparable at all; being
happy with one doesn't mean you're going to be happy with another.

Well, what I mean: e.g. C-Lab Falcon isn't expensive for people who need
a Falcon instead of a Macintosh.

Greetings,
TH

No ! it has a bigger Diplay then the SM124, no need to tweek the internal
controls as with the SM124 that also causes the SM124 to fail as you end
up over driving the line parts..

The small screen size is Ataries fault, it was because of TV's, but please how
does one get the Mono mode to work on a TV...????

>The correct address for ICD is icdinc@genie.com

I think you are wasting your time, I have tried e-mailing ICD direct on GEnie and via the net and never got any replies..

If fact it was that John Hutch chap that stired up Tom to come on here, but was not via GEnie, I think it was via Delphi...!!!

Tom ICD did come on here for a few weeks then droped off again, may be they are to bussy to talk to thier customers...??

The Atari Menu on GEnie has not been updated for over a year, and no new files there.....

Looks like you should have brought a Amiga you would get far better support..??

I'll probably draw some heat on this, but I assumed he did not
realize the Falcon was available. Even at the high price of the Falcon
who would buy an STE (except for me) when for a little more you
could enjoy the software I mentioned earlier. MOST Atari users
probably could not afford all of the NEW software available
and there is at least one good package for each need so what is
your bitch. The POINT is, be it a MSTE w/PAC030, a Falcon,
Eagle, Medusa, or a Mac with Magic there is plenty of FANTASTIC
software for TOS that cost much less the other platforms. You
could probably purchase any of the above mentioned hardware
and recoupe your cost in software alone, even it TOS's limited
market.

Mike:)

"G> programming Macs or Suns etc - and I don't want to have to
"G> relearn anything more than the development environment.

I agree with the idea of portable code in theory-saves time, pulling out your hair, etc. :-) BUT you can end up with code that is so generic that you loose some of the benefits of a specific machine. For instance you may decide not to use Falcon DSP routines because you also want to port the program to the IBM/clone market. Now wouldn't it be a crime if say, APEX did this in the name of portability? Ouch!-Apex would be all but unuseable-or look like Corel Draw, take your pick. I guess in the end we can only make code portable "as much as is reasonably possible."

H > Thanks goodness you are NOT a low-life, scum sucking pirate,
H > eh? Sheesh! And some people wonder why developers don't write
H > more Atari s/w

Well said, Hutch. I wonder why the concept of intellectual property rights is so hard for some users to grasp?

We have both heard all the excuses from pirates: "The software is too expensive, its not used that often, it's not good enough to buy, etc" ad naseum. No matter what excuse is used, it is still theft, plain and simple.

Intellectual property rights seem to be too abstract a concept for some. These same pirates would probably agree that if you caught a thief in your house stealing your possessions, you would be justified in shooting him. Please tell me what the difference is between intellectual property and physical property? The only one I can see is that intellectual property is too abstract a concept for their tiny brains to grasp.

C.J.Ridd@cs.bham.ac.uk (Chris Ridd) writes:
>The only things that don't seem to work in Papyrus 3.66 are importing
>tables and graphics in RTF.

Right, that's not yet implemented (tables are be imported as tab-separated
paragraphs). We'll eventually fix that. The problem with graphics
is that there are lots of different formats.

pite@linnea-grind.stacken.kth.se (Tomas Nilsson) writes:
> What I wanted to ask is if someone have transferred RTF files from Papyrus to
>Word or Pagestream on a Macintosh. I tried to do that but Word 5 didn't
>recognize it as a RTF file. Perhaps I should try to import it on WordPerfect
>instead?

Maybe you should get an update of Papyrus. In Papyrus 3.60 we redesigned RTF
export to work around some of the problems MS Word 5 had with import. I heard
that MS Word 6's import is more reliable.

It is much more diffucult to write a good RTF reader than a writer,
so problems are mostly the reading program's fault. If you have RTF documents
that don't import properly in recent Papyrus versions (3.6x), please
send me bug reports.

MagicMac currently will *not* work on PowerPC based machines, it requires an '030, System 7, and gobs of memory (knowlege of the German language is usefull), Anyone know if it will work on an '040? I have recently gained access to a Mac capable of running MagicMac, where can I grab a copy of MagicMac demo?

I dunno, I've heard the keyboard was improved from the MegaST on up, and
most likely the newer 520STfm's and 1040ST's, I fooled with a falcon once
and the keyboard was noticably better than the one on my original 520ST...

Someone has yet to write ZIP drivers for ST's, to use a CD-ROM you need a
special driver, you can try Atari's old MetaDos drivers, which are old,
unsupported, difficult to set up, and probably won't work anyway (but
they're free), you'll have better luck getting ExtenDos, which is
commercial, new, supported, easy to set up, and it works! Email Toad
Computers at toad@charm.net for a catalog contaning info on ExtenDos, and
several Atari CD's.

> version for the PowerMac.

Months?
Sorry. It's already running. For some days now. And the german version is
already shipping. The english version perhaps next week.

> I've been told it will run on PowerMac in the future but running mostly in
> 68K emulation mode it will be slower than running it on a 68K Mac.

Yes, we use Apple's 68K emulator. At least, even on the slowest PowerMac
(6100/60), QINDEX and GEMBENCH show that the CPU performance is about 10%
above of an Atari TT.

On monday, I'll upload the english demo version 1.2 of MagiCMac to the
Info-Mac archives.

If someone could suggest some Atari related ftp server, that is not too
busy to log in as anonymous, please send me an email so that I can upload
it there, too.

A real problem, but the only way is to upgrade any ST with STESCC from Harun
Scheuzow from Germany. This little Hardware expands STs with 2 extra serial
hispeed ports. 115kbaud are no problem, it uses the SCC as Falcon and TT.

>No problem there at all..! I wish everyone I knew here in the US spoke...

4424. TRADEprinters for ST stuff

Newsgroup: comp.sys.atari.st
Date: 1995-06-10 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <hw69V1M.lmcclure@delphi.com>
Source record: 164046

Now that I have a laser printer in the house, my three dot matrix printers are sitting idle, so it is time to trade them for something I will use.

Originally, I was looking to trade one or more of them for an external CD-ROM drive, but as there has been no response, I have decided to expand my list of items I will accept in trade:

Here is what I am offering in trade:

Printer Model	Approx. Cash Value
Panasonic 1091i	$70
Star NX-1000 Rainbow (color)	$75
Citizen GSX-140 (w/ color kit)	$170

Most of you are likely familiar with the Panasonic and Star models mentioned. Both are 9-pin printers. The Citizen is a very nice 24-pin printer, with loads of features including a LCD menu display, loadable macros, reconfigurable push/pull tractor, etc. If I were going to keep any of these printers, it would definitely be this one.

All these printers are in very good condition, and include original manuals and boxes (although the Star's box is missing the styrofoam packing blocks).

ITEMS WANTED IN TRADE:

(1) For the Panasonic 1091i or Star NX-1000R:

* Single speed SCSI CD-ROM drive (for use with Atari ST)
* NVDI 3.0 or higher
* B&W hand scanner for ST (i.e., Migraph or Toad)
* Quantum LPS120S drive mechanism (or LPS105S + <$25)
* External 14.4Kbps data/fax modem
* Set of four 1meg 2-chip or 3-chip SIMMs, 100ns or faster
* Tabby graphics tablet
* Sound digitizer + cash (unless digitizer of equivalent value)

(2) For Citizen GSX-140:

* Double-speed SCSI CD-ROM drive (again, for use with Atari ST)
* External V.34 (28.8Kbps) modem
* Quantum LPS240S + <$30 or larger Quantum drive
* Color multisync for use with ST (i.e., handles 15.75-35.7Khz)
* Iomega ZIP Drive (Hey, I can dream, can't I?)
* Any two of the items listed under (1) + <$25 cash (or one + <$95)

Naturally, I am not averse to cash-only offers, either. <grin>

If you have something not listed that you think I might be interested in, make the offer...the worst I can say is "No thanks".

If you have an item you want to trade but think it is worth more than the printer you want to trade it for (i.e., a Quantum LPS240S for the Panasonic or Star, or a NEC 3Xe for the Citizen), let me know how much extra you would want from me.

There has been evidence to suggest that the mind is not developed enough for abstract thought in many western cultures - the development is slow and tedious.

: some. These same pirates would probably agree that if you caught a
: thief in your house stealing your possessions, you would be
: justified in shooting him. Please tell me what the difference is
: between intellectual property and physical property? The only one I

There ARE differences, but not to the point of justifying theft. For instance, in physical theft you are depriving someone of an item - with intellectual theft, you are possibly depriving someone of profit. However, intellectual theft can go on much grander scale because the theft can continue ad infinitum.

: can see is that intellectual property is too abstract a concept for
: their tiny brains to grasp.

I think that most platforms will die simply because of piracy. It has a much worse effect on smaller markets (Atari ST, Amiga, and to a lesser extent Macintosh) than on large markets where a large profit can be made in the face of piracy. I wish I had my source about me and I would look into the information I saw regarding very poor mental abstraction skills in young people of Western culture.

4435. Long Island NEAR*US AtariMeet!

Newsgroup: comp.sys.atari.st
Date: 1995-06-11 00:00:00 UTC
From: b.poehland@genie.geis.com
Message-ID: <199506110617.AA248691439@relay1.geis.com>
Source record: 163910

June 11, 1995

Fellow Atarians!

Get a pencil and mark your calendars! Grab a phone and call your friends! On June 17th, 1995, NEAR*US will be having an AtariMeet on Long Island!

What's an AtariMeet? Well, it's a get-together with other Atarians from around the NorthEast. It's informal with guest speakers, demos, and Atari goodies to buy, sell & trade. It's where to meet people interested in Atari computers and related products. It's a place to make friends with common interests. It's a place to share information, tips and techniques. Best of all, attendance is FREE!

Our main speaker will be from Wizztronics. Wizztronics continues to support the Atari community with many products like CartMaster, Compatibility Plus, Deka 2 Keyboard interface, and the Falcon Rack. They have brand new products including the Barracuda 040 Accelerator for the Falcon 030 and are continuing work on a several new and exciting projects. This is your chance to find out all the latest, right from the source!

At this time, several other notable Atari developers/vendors have expressed serious interest in attending. They represent both 8-bit and ST areas. Some have not committed as of this date, but Nir Dary of OHAUG has shipped his PAL-upgraded 130XE to Ben Poehland in Pennsylvania. Ben will demonstrate this latest 8-bit upgrade which permits North American 8-bits to run European PAL software without compromising the ability to run NTSC software as well.

There will be tables available for vendors, developers & users wishing to sell and trade Atari related items. Reservations for tables are required, and a small donation for tables is requested to help offset costs. If you are interested in reserving a table, please contact me ASAP!

If you are a vendor or developer of any Atari related products and would like to address the group and/or demo your products, there is time to make your plans right up to the day of the AtariMeet! We want to meet you and will be keeping this AtariMeet as informal as practical to accommodate all interested parties.

During the last 8 months, NEAR*US meetings have drawn Atarians from Connecticut, Massachusetts, New Jersey, New York, and Pennsylvania. Atarians using many different platforms and with varied

backgrounds and skill levels found many common interests, but all with a need for support! Finding support is what NEAR*US is about!

Jonathan C. Mordosky
NEAR*US Interim Chairman

If you need further information, would like to reserve a vender table, or represent a Atari supporting company and would like to address NEAR*US, please feel free to contact me at the following:

on GEnie: J.C.MORDOSKY
on the Internet J.C.MORDOSKY@genie.geis.com
on the IAN & NEAR*US Nets: Jonathan Mordosky
on ACUTE BBS (610) 261-0620: Feedback to SysOp
via US Mail: Jonathan C. Mordosky
P.O. Box 796
Whitehall, PA 18052-0796

What is NEAR*US?

NEAR*US is an association of 8/16/32/64 bit Atari users. It is in a continuing process of reformation. It is non-profit and self-funded. It is not affiliated with Atari Corporation, its subsidiaries or any commercial enterprise. We do not support piracy either directly or implied, or the use of computers for any illegal activity. A short history and more information about past meetings can be found on GEnie and many BBSes.

NEAR*US AtariMeet

Saturday, June 17, 1995 - 12:00 AM to 5:00 PM

Admission is FREE!

Plainview-Old Bethpage Library
999 Old Country Road
Plainview, New York USA

The Plainview-Old Bethpage Library is located in the middle of western Long Island in New York. It is located on a major roadway and is easily accessible from major highways.

Directions from the Long Island Expressway:

Take the Long Island Expressway to Seaford Oyster Bay Expressway (Rt. 135). Take the Expressway south to Exit 10 (Old Country Road). Travel east on Old Country Road about four (4) blocks, the library is on the right. It is a large library with a parking lot in front. Across the street is a large shopping area. The meeting rooms are in the basement.

Directions from the Southern State Parkway:

Take the Southern State Parkway to Exit 28AN (not 28N), the Seaford Oyster Expressway. Take the Expressway north to Exit 10 (Old Country Road). Travel east on Old Country Road about four (4) blocks, the library is on the right. It is a large library with a parking lot in front. Across the street is a large shopping area. The meeting rooms are in the basement.

4436. Mega STE For Sale

Newsgroup: comp.sys.atari.st
Date: 1995-06-11 00:00:00 UTC
From: mparrott@kendaco.telebyte.com
Message-ID: <3rdebs$mgv@news.telebyte.com>
Source record: 163911

I'm posting this for a friend who doesn't have internet access; please reply to the phone number below only!

He's interested in selling the following:

Mega STE w/4 Mb RAM, TOS 2.06, HD Floppy, Keyboard, Mouse,
120 Mb Internal HD
SC-1224 Monitor
Golden Image Hand Scanner
Lots of software

He was looking to get $800 out of this a while back, which he's been informed was a bit unrealistic. So now he's still asking $800, but is willing to entertain offers. :) So don't mind the price *too* much; call him up and offer whatever you think the system's worth.

Please call (360)876-6982 to make offers or get more info on the system.

Thanks!

I remember reading an interview with a spokeswoman from US Gold. The inevitable question on piracy came up, and I was amazed! She said something along the lines of "Piracy isn't such a widespread problem on the PC. PC owners seem to have a sense of pride in owning the manuals.".

Obviously she hadn't been around a typical Uni for some time - out of all the people I know here who have PC's, I know most of them have very little original software if any at all. I have *NEVER* seen an original copy of Doom, Doom II, Word 6, or any of the other popular titles. It just amazes me how these games companies turn around and say "Oh, we're not publishing for the Atari any more because of piracy", and then turn around and feed stuff to the PC market. Yes, they probably still sell more on the PC even with the piracy, but rubbing Atari users noses in it just seems odd.

Neil.

I've been searching for a good and flexible sequencer platform and I
just read about the program described in the subject. The description
I read about it (from Keyboard 12/94) was quite brief, covering mostly
the very basic facts about the program ppq, tracks etc... (which seemed
fine to me.
So, what I'm asking are these:
- I'm planning to use the sequencer both live and studio. Is it suitable
for live use, ie. many songs in memory (I understood from KB that there
are some restrictions, what?), reliability, etc
- I'm especially interested in using mainly pre-programmed sequences,
but 'shaping' the process live. Is it suitable for this kind of thing.
(Drop tracks in and out, change a looped sequence to another...)
- Synchronizing (Midi clock, MTC...)

That's about it. BTW, I'm planning to get the Atari version. If anybody
has time to mail me info about the Atari as well (I haven't used one yet...),
- how's the virus situation, midi interfacing (I remember reading that Atari
ST has a midi port stock...) - thank you!

Roger,

There is a lively discussion on the ICD Rt on GEnie regarding the ZIP drive.

What specifically do you mean that the Atari menu has not been updated in over a year??

There are new files _daily_ (if not hourly) on the STRT.

The latest ST Format has an interview with the programmer of MagicMac who says that there will *not* be a version for the Power PC. Of course, the interview may be a few months old and have been overtaken by events, as he says that he would need some cooperation from Apple for this even to be possible.

My brother sent his recently purchased USED Mega ST to Toad Computers
twice, to get it fixed so that it doesn't continually bomb. The problem
still hasn't been alleveviated. He needs the system to do
serious MIDI work, especially since he just upgraded to Cubase.

The previous owner used to have PC Ditto 2 installed in the system,
and removed it just before selling my brother the system.
I remember that awful card.. it soldered directly to the CPU, and I
suspect that the PC Ditto 2's installation/removal process left something
in a shaky state.

Can anyone recommend a competent ST repair service? I would really
appreciate it, and so would my brother.

Thankfully,

Jeff McWilliams

The ZIP drives are usable with the TT/Falcon SCSI port.

On the other Atari's, you need a Host Adapter that supports parity, either the Link II or the adSCSI+ board. A Link I or regular adSCSI board will not work.

There is also a modification that needs to be done.

Hi, I am trying to get in touch with 'Hard & Soft' of Germany, who manufacture the TopLink host adaptor.

I need to know what I must do to get their TopLink to work with an IBM 0661-371 SCSI drive. This drive has no onboard termination and cannot provide terminator power, two things that the TopLink requires ! (apparently). Essentially, will it work if I put an active terminator on the SCSI bus ?

I have been given their mail address & phone number, but I can't speak German, and whilst I am sure they speak perfect english, the idea of calling international to ask a possibly complicated question scares the hell out of my phone bill !! :-)

Anyone living nearby want to call them for me ?....or know an e-mail address for them ???

MANY thanks in advance,

Cheers,

Kev.

: much worse effect on smaller markets (Atari ST, Amiga, and to a lesser
: extent Macintosh) than on large markets where a large profit can be made
: in the face of piracy. I wish I had my source about me and I would look
: into the information I saw regarding very poor mental abstraction skills
: in young people of Western culture.

This subject is more complex than most people (especially those who see
the world as black/white -> wrong/right..) are willing to admit.

I just recently read a scientific study (if someone's interested, I'll
try to find it again..) that showed some interesting results: piracy in
the U.K. actually _benefitted_ the software industry. And why? This
research reached a conclusion that the benefit of more people _testing_
software, even illegally, is higher than the immediate sales losses.

Pirated software actually worked as demos, and made finally many people
who'd otherwise had never even seen the software, purchase the package
(to get the manuals, updates, support, ...).

What do you think? Was this research rubbish?

Greetings,
TH

>rights is so hard for some users to grasp?

It seems like, (after reading Hutch's words) he didn't pay attention when we had this discussion last time. (sorry Hutch, i couldn't find your original message. Thats the reason why i quote this).

In my opinion it's not the "pirates" who is to blame for the lack of software we have on the Atari platform. I would blame almost anyone else than the pirates.

1. Many of those who you believe are pirates are simply using cracked software on their computer, because that's all they could get. It may sound a bit stupid, but look around and tell me how many dealers are left?

2. As an reflect to the missing dealers, the users got nowhere to test the software before paying for it, which makes it alot simpler to just test a cracked version insted, (if they can't get hold on to a demo version).

Their alternative is to stop using their computer, and what good would that make to the market ?

You got to face that fact, that getting commercial software for the atari platform is getting harder every day. (getting cracked software is very easy though). And why should a decent user struggle with international phone calls which cost a fortune, spending extra cost on a Master/Visa card not to mention euro_cheque and stuff like that, just to be able to pay for the software. Most often a user like that ends up paying doubble the price of the software. And noone has gained anything on the other half of the price.

Of couse there will always be some people saying that they can't afford the software. But thats just a damn lie. IF they can't afford the software i don't see how they can afford the computer itself. Or is that also a cracked computer. You can't do anything to people like that, (and i'm not sure i want to either, because there's still a chance they'll get a few friends on the market with them, and perhaps it's a few better thinking friends).

I could re-mention my own experience with a BBS package i bought long ago, but i have a feeling Hutch still remember that one. So all i need to say to

Hutch is: Think about my experience with my BBS package next time you blame the users for the lack of software on the atari platform.

An easy solution to the above mentioned problems is to do like many authors on the communication side has done. Get support people round the world so the users can registre in their own country. (Simply: Get one person in each country, (which the author feels could have a relative market for his software), to collect alot of registrations, as it'll be easyer and cheaper for all people. This person will soon have a status like a dealer.
But ofcouse, this means the author has to do some work. But isn't that what he is getting paid for ?

I'm sure this would change something, at least it has done for alot of authors on the communication side.

None of the above is meant to be excuses. It's causes! and my solution to get a step futher the ideal world, (which is un-reachable btw.).

Greets
Kim

4462. Hard Drive terminations

Newsgroup: comp.sys.atari.st
Date: 1995-06-12 00:00:00 UTC
From: troyc@bnr.ca
Message-ID: <3rifmt$7ms@batph8.bnr.ca>
Source record: 163753

I am starting to have some problems with my Hard Drives. My setup is as
follows:

Atari TT
Quantum LP120S GM120S01X internal Drive
Seagate ST157N connected to the SCSI port. The cable is a 3 foot Atari
to Centronics, connected to a 3 foot system cable (centronics - 50 pin),
making the effective cable length 6 foot.

I have no idea how to check for SCSI chain terminations, so I don't
know if everything is set up right.

Questions:
1. Is the cable lenght too long? The idea was to eventually move the
Seagate into a drive case and have the system cable long enough to
put new connectors on it for another hard drive and a tape drive,
possibly a CD ROM sometime in the future.

2. How do I check for SCSI terminations? I have heard of people
terminationg the internal SCSI chain as well as the external chain.

For you Linux users:
Someone was saying that they were having SCSI timeout errors (danger
Will Robinson, and all that). Since moving to 0.9.7, I have seen this
three times now, which is why I am asking this question. I never saw
SCSI problems before this new kernel (with 9.4, 5, nor 6).

4465. Minix Setup! ARRGH!

Newsgroup: comp.sys.atari.st
Date: 1995-06-12 00:00:00 UTC
From: dstuart@gpu3.srv.ualberta.ca
Message-ID: <3rigse$hrq@rover.ucs.ualberta.ca>
Source record: 163756

Okay, I am having quite a bit of difficulty here.

First off, let me explain my situation.

I have a falcon with only an 80meg HD (this has been partitioned into 4 20 megs). Until recently I have not needed to do anything except run GEM apps, and so I have not needed to install any other file system. Having said that, after spending two years in comp. sci and dealing with unix systems all the time, I love 'em, and I want to set something like this up on my atari. Also, I recently got a SLIP account, and mint-net was recommended.

At any rate... I've installed mint. That was the easy part. I didn't need to re-partition any hard-drives, or do anything out of the ordinary.

What I would like to do, ideally, is set up something like a bash shell running mint and minix (or maybe linux?) to allow the extra long-names, and then attempt to get mint-net running, etc. Basically I would like to make the transition over to something much more unix-like.

Anyway, now comes my problem.

Minix.

I can't run minit.ttp from the desktop- so I got ahold of a bash shell. The bash shell didn't come with any of the standard utilites (ie: ls, mv, cp, cat, more), so I had to get those (just where the heck are cat and more, anyhoo?), after finding a few utilites, then I could actually move around in my shell, and execute minit.ttp. Seeing as how I didn't want to wipe my entire hard-drive, I typed "minit.ttp -V -n 2 A:", and that promptly initialized the disk I had set up. I think. Problem is, the disk is still limited to 8.3 filenames. The docs are, umm, well... not that helpful. What am I doing wrong?

Also, I can't seem to get onto any other drives other than the one I started out on (although, this could posisbly be a device probem?)- so if someone could help me with that too, it would also be helpful.

Remember, I've started this from scratch, so if I haven't listed it here, I probably don't have it.

I don't suppose there's something like "the idiot's guide to installing minix" anywhere? I've had a lot of unix experience, but nothing in the setup department.

reply to this account or stuart@falun.cs.ualberta.ca

: >in the face of piracy.

: I remember reading an interview with a spokeswoman from US Gold. The inevitable
: question on piracy came up, and I was amazed! She said something along the lines
: of "Piracy isn't such a widespread problem on the PC. PC owners seem to have a
: sense of pride in owning the manuals.".

She's an idiot, to put it lightly. It's simple math. The larger your market, the more pirates you can tolerate with the same return.

First off, you have your active segment and your inactive segement of the market. The Atari ST and the Amiga both (probably) have fairly sizable inactive segments right now:

MARKET - INACTIVE = POTENTIAL

Now take piracy, which is GENERALLY a human condition by percentage and then add to it factors. (Factors for the Amiga and Atari would be that the entry level machines cater to a market without a lot of extra cash, so you will have x1 added to the total percent, but you might also have loyal users comparitively so you subtract x2 and so on):

POTENTIAL * (1 - %piracy) = ACTUAL

Now you have to take the actual figure of the people in the market and subtract the disinterested. There are a lot of MIDI people on the ST who don't really care about it "as a computer" and likewise with the Video Toaster on the Amiga. You must also eliminate the segment not interested in the product. A game player won't care about the spreadsheet user, etc.

ACTUAL - DISINTERESTED = VIABLE

Where this is you viable market and where you expect sales to be.

If you go through and plug in the clone, Atari, and Amiga market numbers you'll find that even at levels of NO piracy and EXTREME market interest, the clone will yield more sales simply because of the sheer size of the market.

That's why piracy hurts more on the "lesser" market-share platforms. It has nothing to do with "owning the manual pride" - sometimes I can't believe how incredibly STUPID companies are.

: companies turn around and say "Oh, we're not publishing for the Atari any more
: because of piracy", and then turn around and feed stuff to the PC market. Yes,
: they probably still sell more on the PC even with the piracy, but rubbing Atari
^^^^^^^^^^^^^^^^^^^^
: users noses in it just seems odd.

Yep. This is the key. You always have to rememeber that they only know
what gets them more $$$'s. Not necessarily WHY.

Date: 1995-06-12 00:00:00 UTC
From: cd827@cleveland.Freenet.Edu
Message-ID: <3rg985$1c7@usenet.INS.CWRU.Edu>
Source record: 163854

My brother bought a used Mega-ST, as a replacement to his ageing
1040ST. He relies on it mostly for MIDI stuff, like Master Tracks and
Cubase. The original owner has installed a PC-Ditto 2 IBM PC emulation
board. I remember those... they were nasty. They had to be soldered
directly to the 68000 CPU.
Anyhow, my brother didn't want the PC Ditto 2 so he had the original
owner remove it before sale. Now the Mega ST bombs A-LOT. It's been
to Toad computers TWICE to be fixed, and it still bombs.

Can anyone recommend a good ST repair service? Somebody who knows what
they're DOING, and is thorough?

Many thanks.

> it, can anyone tell me where the DMA chip is located in a Mega STe?

It's directly under the host adaptor. Some are socketed while others (like
mine) are soldered to the motherboard.

Are you sure you haven't got the SCSI ID's the same on both drives?

I can't remember seing the symptoms of your problem, but if you mail me
I can suggest what I can.

>
>Craig.
>(Who has no reason to leave the atari, it's just about to get interesting).

Okay, I'm gonna go out on a limb here. I normally don't read
c.s.a.st anymore. I've been an Atari 8 bit system user for years,
and only in the past 7 months did I upgrade to a 386 PC that I
built myself after ordering all cheap, generic parts.
The PC purchase came mainly as a result of college pressure: Everything
here is Gateway 2000, cow boxes by the pallette load.
Professors hand out things like PSPICE, Mini-TK solver, etc.,
and then assign homework or labs using those systems, which led to
my purchase of a Intel based system.

I'm still a DOS user... using a command line replacement called 4DOS from
a little company called JP Soft. Moving from SpartaDOS-X on the Atari
to 4DOS was pretty painless.

Lately I've been feeling the urge to upgrade beyond my generic
386 system, with vanilla VGA and 1 meg of RAM to something better.
OS/2 Warp has caught my eye, mostly because it ISN'T Microsoft Windows
or Windows 95. (So has Linux... but you seem to need a PHD to
FULLY understand Unix...) Because of that there seems to be a similar
small-community type spirit on the OS/2 Warp newsgroups. It's funny,
I thought I'd NEVER be in favor of an IBM product, but when the alternative
is the Bill Gates behemoth, anything else will suffice.
Warp is still a resource hog compared to say, TOS on the Falcon,
requiring 8 megs of RAM and 60 megs of hard drive space just to get
the OS loaded... but the same community spirit that kept me with the
Atari 8 bit for so long exists to some extent in the Warp user community.
There are small companies out there, like Athena Design, trying to put
out innovative products, and doing so against the raging torrent that is
Microsoft.

The PC is still a major pain in the rear. If I want to upgrade my
hard drive I have to worry about IDE, Enhance IDE, ATA-2,

a limit built into most BIOS systems that says if your hard drive is bigger than 504 megs then all sorts of tricks have to be employed.... or if I go SCSI, another can of worms, do I get the host adapter that's bus mastering or not... and will that particular card be able to work with the operating system I upgrade to later?

I just installed a modem... and once again had to wrestle with IRQ settings, and COM port addresses, and a modem card that wanted to short out my battery holding my CMOS settings because the CMOS settings battery is right next to a card slot...

[sigh].. the Intel world is still an ugly one. Components are cheaper... $79.00 for a 1 meg DRAM Super VGA card... but things aren't any less ugly over here.

Here's wishing better luck in the Atari world... I've been out of touch with it for a while and so don't know □{how well things continue to be supported.

kia ora/hi!

I'm looking to buy a small atari-st system to use for midi sequencing (wot an original reason to buy an atari!)....i want to know a few things about the st,
for instance what models have midi ports built in? (does the 520?) and can a mono system with just say 1-2meg run a midi sequencer?? Can harddrives be installed in the 520/1040 and what type?

is anyone out there in nz with a suitable system for sale??

thanks...

4479. Calamus 95 -> anger?

Newsgroup: comp.sys.atari.st
Date: 1995-06-12 00:00:00 UTC
From: gs01tph@panther.Gsu.EDU
Message-ID: <3rgggs$230@sphinx.Gsu.EDU>
Source record: 163860

People at German MausNet seem to be pretty upset because of what DMC, the maker of Calamus SL is doing right now..

New versions of SL have been announced, both for Atari, and MagiCMac (!). That's the good news. The bad news is that DMC seems to try to turn Atari users into Mac-users by pricing the Atari-version far above the MagiCMac-version =-(... !

Shit. (sorry)

This happens by including some good and expensive utilities, like BRIDGE conversion module, CD-ROM drivers, and some other excellent modules to Mac-version, but not to Atari-version. If you want to use the Atari-version, and still get these excellent add-ons, you have to pay a considerable amount of money to get them separately !

I guess, the MagiCMac -users cheer now - but I don't. This is _not_ fair business, if DMC really tries to get rid of us this way. Now I'd like to hear some comments from American DMC. Are we going to have to pay more in the future, to get Calamus SL for Ataris, Eagles, Medusas, etc..??

From: alien@stang.netspace.net.au
Message-ID: <3rgne6$3r6@otis.netspace.net.au>
Source record: 163861

Hello,
I was wondering whether it would be possible to still find
the game called Oids for the ST? Either from someone wanting to sell
it or some store might stil have it not sure. I don't own an
ST but I have always wanted to check this game out and would buy
it just to play it. I think it was released by Mirrorsoft (not sure)
but I know it was done by FTL (Faster than Light?), the people
that did Dungeon Master. This game was only released on the St, to my
knowledge, and I want it! :)

Failing this, is there a contact address/number/email for FTL,
if they're still around?

Thanks in advance..

I tend to disagree. A good peice of software is a tool. If you buy
Snap-On instead of some cheap pot-metal crap, then it will last
you a long while and do the job quite nicely. If you want a larger
(more expensive?) selection go buy a Hundi (sp?) and let Microsoft
Bob drive you around. You also need to hit return a little more
often.

Mike :)

Yes, it works. I've tried Octalyser on my 1040STE but I wasn't able
to make it work on my TT - probably because of the video system
manipulations used to enlarge the screen size. :-(

IT>Do 8 track S3M modules need so much CPU power?

8 tracks? AFAIK S3M modules consist of 16 8-bit sample channels and 16
AdLib-like sound channels.

AHDI can't hadle partitions bigger that 256Mb (someone correct me if
I'm wrong). What's the size of your drive?

Get HOW_FAST from Hensa, with it you'll see the real throughtput of
your drive, dropouts and calibrations.

ICD Pro 6.5.5 works fine with CAF. Please note that CAF uses *direct*
SCSI-II commands for playback and recording, only part that uses the
driver (AHDI in your case) is the Offline (at least that's what C.
Steinberg told me some time ago). "HDdriver" -software is also
CAF-friendy.

Clicks are mostly a result of a fragmented data, and if you record to
a fragmented drive, you'll get clicks when the record-file jumps around
seeking free space. Get Diamond Edge for doing the disk maintenance and
defragmenting.

Hard drives do also get slower by age (like cars). If it
was OK as new, it might not be after 3 yeas of usage.

I bought IBM DPES-31080 1080MB SCSI-II drive, and after that I haven't had
any problems whatsoever with CAF. It's an AV-drive that does give a steady
in/out rate without any thermal calibration. The test programs say it's not
a very fast drive (1450Mb/s), so the steadyness of the data flow seems to
be more important than fast transfer rate. When talking about 1Gb drives
and bigger the seek rate is nearly always fast enough (10-12ms in real
life), because the physical distances inside the drive get smaller.

PS. join the mailing list:
Send Email to: majordomo@mcc.ac.uk

Not really. Faster SIMMs won't make your STE go any faster. My STM is a mix of 120ns and 80ns. It works just fine.

> New question 2: Where can I get the best deal on these SIMMS?

You might be able to find a dealer who does 2nd hand SIMMs. As anything from 70-150ns will do - you should be able to pick up older slower memory for very little. I've just bought (in the UK) 2nd hand 70ns SIMMs for a PC - and saved about 30%.

> New question 3: Where can I get an old (or new?) Atari HD? I only
> need 10-20 Meg (Just enough room to set up some PPP software and

The real cost is the host adaptor. 40Mb-100Mb SCSI drives are pretty cheap. I wouldn't bother with anything less than 30MB personally.

So whats the cost for a new or used adaptor?

And do I need some software to use the harddisk?

Thanks,
/Adam

NOTE: this post regards all the previous posts along this thread, not just the above!

I've just (almost) finished a slideshow demo which will be going on the usual ftp
sites
soon. It works on VGA and RGB monitors and I agree that it isn't difficult to get most
demos to work on VGA, infact this demo looks better on VGA!

But I have to disagree with Griff, for most demos getting a 'nice' VGA version and a
'nice' RGB version is a 100% pain in the butt. So from now on I will NOT be supporting
VGA monitors in any demo I make (sorry Rich, it's just too much hastle!).

Reasons why:

1) Bandwidth, ok 10% less bus bandwidth might not seem like much, but many effects in
demos run just at the limit to run on 1 or 2 frames. Consiquently it is either
akward or impossible to get a VGA version running in the same number of frames.
E.g - I had to make all my 3d shapes smaller for VGA monitors on my first intro,
so not only did the demo not look as impressive I had two lot's of sequence
info for the 3d shapes.

2) Demo timing, for my last intro I had to do two demo timings, one for each monitor,
I suppose I should have used timer A, but I didn't think of that at the time....

3) Incorrect timer B timing in VGA screen modes. That's right, in VGA True Colour mode
the timer B interupts occur about 1/4 accross the screen. I wanted to make an extra
low vertical rez by repeating each line twice (using timer B), but it doesn't work!

4) Worse screen manipulation. In the above example I just set line doubling on for the
RGB mode to halve the vertical rez, of course VGA already has that bit set.

5) It's just too much hassle. Believe me I have made two demos now that support both
monitor types properly and it does my head in.

I have my say, I'm waiting to get burnt!

Alan.

: plain and simple.

Too expensive/bad quality etc. Well that was a fair enough argument a few years ago but today there is software you have to get a copy of if you want it simply because it is impossible to purchase it from anywhere. No shops sell ST stuff, mail order companies only supply a *few* copies of recent stuff and if they do have old titles they are usually in a very small minority. Some software titles are just impossible to track down these days, I guess people can advertise on the Usenet and in classifieds etc. but when the companies concerned have either left the ST altogether or have gone bankrupt or simply vanished into thin air it does make you wonder how much it really matters if you copy the occassional outdated program. I am talking *old* software here btw, not anything you'd see advertised in ST Format/etc.

Putting a 68020 into a Falcon is TOTALLY out of the question. The 68020 is slower than an 68030, smaller internal cache etc.etc.

NO NO NO NO and NO! The only way is UP! in CPU class when it comes to the Falcon.

I've got a fair few graphics laying around on my hard drive that I've drawn myself, there are about 100 16x16 sprites for a shoot-em-up that I never coded and who knows what else. Anyway are there any programmers out there who'd like to get in touch with me and work on a little game idea I have??? Its nothing major, but with nice graphics and nice gameplay it might qualify for a cover disk release.

Gimme a ring (01785 663383 until June 20th after which its 01275 843241) or write to me at: 10 Oak Drive, Portishead, Bristol, BS20 8QS.
Or email me here!

4502. Q: .zoo decompressor

Newsgroup: comp.sys.atari.st
Date: 1995-06-12 00:00:00 UTC
From: martony@ele.kth.se
Message-ID: <MARTONY.95Jun12160419@arnor.ele.kth.se>
Source record: 163883

Hi,
I have a problem with a .zoo file. It's too big for a 720kb disk to hold both the .zoo file and the decompressed file, and I can't find a zoo program that can store the decompressed file on an other disk. The closest I've got was with boozgem, that let me choose disk b: for the extracted file(s), but then it tried to extract it all on the "source" disk...

I've got an 1040 STe with the builtin 720kb disk, no harddisk, no extra floppy.

BTW, is it possible to decompress files on for example a PC, and use them on my Atari? I tried to de'zoo the file on a PC emulator on a HP workstation, it looked okay, it was the right size, but when I tried to run it on my STe it started loading and then got back to the desktop without anyting else happening.

Thanks,
/Adam

4505. Re: new Falcon demo kicks butt/LAZER

Newsgroup: comp.sys.atari.st
Date: 1995-06-12 00:00:00 UTC
From: e9327376@stud1.tuwien.ac.at
Message-ID: <e9327376.14.003D365C@stud1.tuwien.ac.at>
Source record: 163886

Hi All!

I just want to explain some details about our demo (The Lost Blubb/Lazer)

I am very sorry to hear that many of you had HD-problems, but we have quite limited resources to test our software here in Austria. The only Falcon-owners I know are our crewmembers and it worked fine on all HD-drives we have. I even could test it on a Syquest during the Fried Bits and it worked there too. A further suggestion for running the demo is installing a HD-cache, which should help the demo accessing the HD. Also try defragmenting your HD.

Some comments on doing demos on VGA:

Martin Griffiths (Btw, hi!) wrote that the Lost Blubb could be converted to VGA in a few days (or so). It couldnt. It is possible but it would have been so much work, so we refused to do it. The reason is that the demo runs in a multitasking system (as explained in the readme file), so files are being depacked in the background. Due to the fact that most effects need a high priority to run smoothly, depacking takes quite a long time. So a cut of 10% (or how much it now is) stretches the time the effects need for depacking, wich furthermore means that the high pace in the demo couldnt have been kept in the VGA-version. This means timing the demo twice (it is VBL-timed btw), and we didnt have the energy to do that. I hope you understand this. All of our recent things (and some new ones n/a yet) run on the VGA, so we are not ignoring the it (I have one myself and I prefer it.). The demo is actually an exception, as we try to do it all as flexible as possible.

I still hope that you enjoyed the demo.
If you have any comments or questions, just email me.

See you Lazer,

Harald Riegler (Energizer/Lazer)

PS: The demo was programmed on a 60MB IDE with AHDI (Photons Falcon) and on a Quantum 360 SCSI and 60MB IDE (mine) with Hushi, all 4MB ram.

Source record: 163889

In article <3rhefu$scc@macondo.dmu.ac.uk> Alan Parker <se2ap@dmu.ac.uk> writes:
:>I've just (almost) finished a slideshow demo which will be going on the usual ftp
:>sites
:>soon. It works on VGA and RGB monitors and I agree that it isn't difficult to get most
:>demos to work on VGA, infact this demo looks better on VGA!
:>
:>But I have to disagree with Griff, for most demos getting a 'nice' VGA version and a
:>'nice' RGB version is a 100% pain in the butt. So from now on I will NOT be supporting
:>VGA monitors in any demo I make (sorry Rich, it's just too much hastle!).

:>Reasons why:
:>
:>1) Bandwidth, ok 10% less bus bandwidth might not seem like much, but many effects in
:> demos run just at the limit to run on 1 or 2 frames. Consiquently it is either
:> akward or impossible to get a VGA version running in the same number of frames.
:> E.g - I had to make all my 3d shapes smaller for VGA monitors on my first intro,
:> so not only did the demo not look as impressive I had two lot's of sequence
:> info for the 3d shapes.
:>2) Demo timing, for my last intro I had to do two demo timings, one for each monitor,
:> I suppose I should have used timer A, but I didn't think of that at the time....

Any reasonable 3d routine should be using a timer for frame compensation, this
saves a lot of trouble with timings (as you've discovered).

:>3) Incorrect timer B timing in VGA screen modes. That's right, in VGA True Colour mode
:> the timer B interupts occur about 1/4 accross the screen. I wanted to make an extra
:> low vertical rez by repeating each line twice (using timer B), but it doesn't work!

I think setting the 'active edge' bit solves this problem - its 3 lines of code
for this (gosh.. VGA is such hassle!)

:>4) Worse screen manipulation. In the above example I just set line doubling on for the
:> RGB mode to halve the vertical rez, of course VGA already has that bit set.

Why didn't you just create 320x100 VGA mode... to do this you 'create' a 320x200 video mode
with some software like 'blow-up' and then grab the values for this mode and set the
linedoubling bit..... (not much hassle at all)

:>5) It's just too much hassle. Believe me I have made two demos now that support both
:> monitor types properly and it does my head in.
:>
:>I have my say, I'm waiting to get burnt!
:>
:>Alan.

It seems *madness* to write demos for RGB when only about 10% of Falcon owners
actively use their machine with one of these monitors. I can't believe you

sit at an RGB monitor coding or even worse a TV... you'll go mad!

Griff

>
>

WAIT! Before you assume it is a problem with the DMA Chip, you should first
check to see that the internal drive interface is jumpered. I had to do this
to my MSTe to get the external drives to work. Look under the "hood" towards
the back. You should see the clock battery velcroed to the back. In the
upper right hand side you will see two rows of pins sticking up (I am not sure
how many since I am not at home right now). If there are no jumpers across
any of the pins, then you need to get 8 jumpers and put them across the first
8 pins starting from the bottom.

Maybe someone else can provide better instructions, but hopefully this is
the problem, not a DMA problem.

Also, the MSTe needs to use an ACSI -> SCSI adapter like the ICD Link. It
does not have a built in SCSI interface like the TT or falcon.

4510. Bad Ste DMA

Newsgroup: comp.sys.atari.st
Date: 1995-06-12 00:00:00 UTC
From: Sim <py4sdh@bath.ac.uk>
Message-ID: <Pine.SUN.3.91.950612190614.953A@slc-26>
Source record: 163891

Hi all,

A few weeks ago someone posted the chip number of the Dodgey DMA
chip for STe. Mine is a first revision STe, the chip number is c025913-38 so
can someone confirm wether this is the suspect part number.

If this is the bad DMA chip, is there anything I can do about it
other than replace it? IIRC the problems only occur after a few hours of
use, so this suggests to me that, it's a simple heating problem. Could
this be cured by having a fan or heat sink? And how come the problem
dosen`t affect either the floppy disc drive or DMA sound chip? I`ve never
had corrupt floppies or bad dma sound even after running my Ste for 10s
of hours in a warm room.

From: tom.thomason@fpc.ct.se
Message-ID: <ftn_2.203.203.15$fidonet.org_2fdc2f9b_Tom.Thomason@fpc.ct.se>
Source record: 163892

On 10 Jun 95, Jannette L Hutchison shot this through the ether to All ...

JLH> I just picked up an STE and was wondering what type of joysticks
JLH> are compatabile with the two ports on the left side of the case?

Those two ports are intended for analog joysticks. AFAIK there are none available for the Atari ATM. The good news is that you should be able to use Jaguar joypads in these ports and they can be purchased separately. I say _should_ be able to use them because I have a Falcon and can't check this out on an STe. The Falcon ports I'm using are (again AFAIK) identical to those found on the STe.

Cheers,
Tom

Hej!

Yesterday I dl german magazine ATOS 5.

They said that the makers of BlowUp now offer a Falcon expansion board,
called Falcon EXtender.

The following features are named:
- Higher CPU (40MHz) and Bus speed
- Higher DSP speed (50 MHz)
- included BlowUp I
- FastRam option with max. 32 Mb

Could anybody give some more information about this? I would like to know how
much it should cost and how fast the Falcon could become.

mvh,
christian

>on this 1040 STe.

The STE takes normal SIMMS that you can use on a PC. In fact it is not
so fussy! I fitted some that wouldn't work on a PC. BTW I took off my
shielding than I needed to. Just remove the shielding over the power
unit to expose the SIMMS in the middle.

As far as the hard disk is concerned the normal SCSI will work with an
adaptor like the ICD link. I have heard of people using IDE and MFM.
Not sure about those.

I'd personally use GFA Basic to do this. I've written a few programs to
provide an interactive interface for a null modem link between my ST and
an old XT. The comms stuff is really easy ... once you write the main
routines (like init, get input, write line etc) the rest is easy!

If you want any more help, email me! Same goes for everyone else interested!

: >cheap place that sells keyboards?

Assuming you have the TT030 or Mega STe keyboard: Firstl physically
check inside to determine the cause of the problem. For me, the scuffing
of the internal casing had severed the PCB track which is on a thin
plastic backing. The cure is to lightly sand the track each side of the
break with 400 to 600 sandpaper to remove the lacquer, go gently as the
copper track can easily be rubbed off! Carefully prick several SMALL
holes through the plastic and copper track and thread a thin wire from
a multistrand cable through them. I have had no problems since, although I
taped the area to give protection from further scuffing.
Alternatively, you can follow the tracks to the main keyboard PCB, solder
wires from there to an external push switch taped to the side of your
keyboard. Sounds crude but is possible - and costs nothing! Hope this helps.

4531. Re: What is Mint?

Newsgroup: comp.sys.atari.st
Date: 1995-06-12 00:00:00 UTC
From: mbecroft@iconz.co.nz
Message-ID: <3rg3i7$bth@status.gen.nz>
Source record: 163946

Novotny Pavel (novotnyp@ERE.UMontreal.CA) wrote:
: Could someone please tell me what Mint is. I see it mentioned everywhere.

MiNT is an extension to the ST's OS. It adds many functions to the OS, including Multitasking (with many unix like functions), the ability to load extended filesystem drivers (for example you can access a Minix filesystem under MiNT without having to run Minix.) If you're filesystem supports it, you can give files an owner and access permissions as with Unix.

MiNT also allows other additional parts to be added on, like MiNTos or MiNTnet for SLIP or PPP. You can obtain ports of many unix programmes such as X-Window, many networking utilities and so forth to run under mint. It is easy to port programmes to MiNT as it is very similar to unix.

MiNT uses "Pre-Emptive multitasking with adaptive prioritization" which means that one task cannot hog all the processor's time, unlike a cooperative system like Geneva. Each task can be given a priority which is used as a sort of rough guide to teh amount of processor time a task is given. Even a top prioority task will not, however, leave no time at all for other tasks. If a task is doing nothing however, it will not be given any processortime no matter what it's priority.

If you do not write programmes yourself, you might find that MiNT on it's own is not that useful. However, if you buy MultiTOS, you get MiNT with AES 4.0. AES 4.0 can only run under MiNT and can multitask (allowing GEM applications to multitask) as well as having many improvements including MS Windows like 3D buttons, multicolour icons, and many other functions only of much interest to programmers.

: Is it PD sw. I have tried to get into the Atari archive Ftp Ohio without
: any luck. Always comes unable to access. Any advice on this.

MiNT is PD, but AES 4.0 is not. The latest version of MiNT is 1.12 which doe not come with MultiTOS - MultiTOS comes with an older version.

I think nobody can ever get onto aaue - unless they are very lucky. Instead, just ftp to src.doc.ic.ac.uk and go to the packages/atari/umich directory. This is a mirror of all the Atari files on aaue.

Hope that explains it.

Well I supose if all you want to do is run some music software and the odd
bussiness package - this might be okay.

However it cuts off any hope of running decent multitasking operating
systems - as you can't do virtual memory on an 020. I wouldn't buy an 020
machine under any circumstances at the moment. I already have a TT, but
would consider a 030 Falcon if it was cheap enough.

All AFAIC and IMHO of course.

:-)

Agreed - though I must admit the lecturers I had were very good. If they
had any faults it would have been being too Unix centered. As it happens
I like Unix - but occasionally come unstuck if I have to use a system
which has no Unix compatibilty libraries.

> Please point out to such people that they are wrong, ANSI is
> there for portability.

I try - but its a losing battle. The same goes for C++. More and more
Visual C++ is becomming the accepted norm. I don't know Visual C++ but
AFAICT its tied down to MS Windows - which doesn't interest me one bit.

No - not *asking* is the same as being a pratt! ;-)

> I have read several threads about linux, minix partitions, mint etc...
> and would especially like to see something resembling xwindows or
> motif on my TT.

You're not the only one!

>Have I said something daft?

Not in the least.

There are 2 choices for X Windows on the TT:

1) MiNT-X
2) Linux/68 + X11R6

1) This is a port of X11R5 which sits on top of MiNT much like AES 4.X sits on top of MiNT to be MultiTOS. MiNT-X is okay - but a bit rough around the edges. The main advantage of this setup is that it will run on any ST with 2-4Mb of memory. Its mono only though.

2) This is a port of the Linux OS for the PC onto the 68030. It requires a 68030 *and* an FPU. The X11R6 is the latest version of X-Windows and is pretty solid. As Linux can do Virtual Memory - RAM is not so much of a problem - but 8Mb is generally necessary to get it to run X at a good speed.

I have both installed on my TT - but (2) is becomming more and more used as applications get ported to it.

TT-hi or a graphics card is best - as TT-med is poky :-(

Motif is currently not available as it is copyright software AFAIC. There is no reason though why it could not be ported to MiNT-X and Linux/68-X11R6 AFAIK. It wouldn't be free however.

MINIX is an older Unix like OS which ran on PCs and STs. Although pretty much replaced by MiNT and Linux/68 - it was small and stable - and had a very good filesystem. This filesystem has been ported to MiNT and Linux/68 and is very popular. Linux also has other better filesystems ported from the PC version of Linux.

> it possible to run gem applications?

Not under X-Windows at the moment. OTOH having X-Windows installed doesn't stop you from booting into TOS/GEM mode though.

> where do I go to for an easy-to-set-up unix-like environment.

Good question. There is a distribution package for MiNT-X around which will do most of what you want. Its really designed to run the Chimera WWW browser - but as this requires a pretty full MiNT-X setup - it should do.

Linux/68 is much more 'alpha'. I installed mine from a PC Linux CD-ROM which just happened to have a copy of the FTP site the 68030 version was on. Even though I had to get some of the files from people on the 'net - and from the X11R6 distribution CD-ROM I have.

:-)

Not really. Faster SIMMs won't make your STE go any faster. My STM is a
mix of 120ns and 80ns. It works just fine.

> New question 2: Where can I get the best deal on these SIMMS?

You might be able to find a dealer who does 2nd hand SIMMs. As anything
from 70-150ns will do - you should be able to pick up older slower memory
for very little. I've just bought (in the UK) 2nd hand 70ns SIMMs for a
PC - and saved about 30%.

> New question 3: Where can I get an old (or new?) Atari HD? I only
> need 10-20 Meg (Just enough room to set up some PPP software and

The real cost is the host adaptor. 40Mb-100Mb SCSI drives are pretty cheap.
I wouldn't bother with anything less than 30MB personally.

All IMHO and AFAIK of course.

:-)

Roland.

Just wondering, is PPC MagicMac written in native PPC code? Or is it just
the '0x0 version modified to work with PPC's?

: it looked okay, it was the right size, but when I tried to run it on my STe
: it started loading and then got back to the desktop without anyting else
: happening.

You can decompress on a PC, but given the HP workstation, why not use
that directly? You can get source for zoo, zip and lha for Unix from
aaue in /Archivers/Unix (I would use the mirror at
ftp://src.doc.ic.ac.uk/packages/atari/umich/Archivers/Unix). This
assumes that you have some way to do binary transfers between the HP
filesystem and the floppy.

If the program (is it a program? you didn't say) returns to the
desktop with no bombs, my first guess would be that it has failed to
find something it was expecting (resource file perhaps?) and exited
without explaining what was wrong. Some programs depend on finding
files in specific places.

Hello Dick,
The problem You mention is very common and I'll try to give You some hints.

First of all, the CPU clock has to be buffered - there are two different modifications and regretfully no way of telling which one should be made, if the first doesn't work, the second will. Check out if an IC is soldered piggyback on the PAL U63. If not, it's almost a miracle that Cubase Audio works at all... If there is an IC, You'll probably have to do the other modification. If You need the instructions on how to make these modifications, send me a mail and I'll send them to You.
OBSERVE! if Your warranty is still valid, You shouldn't open the case, but let Your repair centre do it for You - the modifications should be covered by the warranty (anyway, they are here in Sweden).

Next thing to do, if there are still problems left, is to check Your partitioning. I haven't been able to make it work properly with bigger partitions than 256MB when using AHDI/HDX, but with Hard&Soft's SCSItools I can make it run with 512MB per partition (well, 511.9MB - but still...).
SCSItools makes the SCSI run at approx. 1.8MB/s with my Conner 1060 drive, while AHDI only makes it run at 1.3MB/s. The possible size of the partitions depends on the sector size and with Cubase Audio it has to be 8192 bytes. If the chosen size of the partition is bigger than 256MB, HDX automatically forces the sector size to 16384 bytes and You can't change that - in SCSItools You are free to change it, and that's why I've been able to use larger partitions.
As a little extra, I can tell You that my 850MB EIDE drive runs almost at 3MB/s with SCSItools (well my F030 is in a tower, so I have lots of space for extra 3.5" drives...).

I have been told by Steinberg that the harddisk should not be slower than about 10-11ms, to be able to play back 8/16 track simultaneously, otherwise You have to part the recordings between two harddisks or use the RAM-track functions - that is, if You have RAM enough for it (16MB).

Another thing that's important is to keep the harddisk defragmented, because otherwise the heads have to scan over large leaps when playing back the recordings and there can be BIG problems. This is very important, especially

when You cut and edit the audio files in different ways.
I strongly recommend You to use Diamond Edge from HiSoft to do this trick.

By the way, it's always good to have the latest version as there have been some bugs in previous versions of Cubase Audio. The latest (that I know of) is 2.03 and it runs very good in my system.

Please let me know if You are successful after trying my suggestions, and if You want to do the modifictions, let me know and I'll send the instructions to You. I have fixed systems lots of times, since it's my job to make Atari repairs (my company is the only one in Sweden that is authorized to make warranty repairs). My own Falcon system runs very smooth, and so should Yours - after taking the neccesary steps.

Kindest regards,
Claes

NeoDesk 4.02 works with MagiCMac (and so probably works with MagiC).
It (NeoDesk) still has all the crappy redraw bugs, of course, but it's
still better than the feature-free Ease that comes bundled with MagiCMac.

Is there a program for the Atari Falcon/ST that will allow you to save a GIF file (or convert it) to the GIF89 format, so you can _easily_ (not like giftrans) specify what colour is the transparent colour??!!?

It is useful if you are using netscape (that can use transparent information for more interesting looking screens)

Just my $0.02:

I think piracy is what made the PC today's standard. *Every* PC owner
I know has illegal software. Most even don't know that it's illegal
to copy software. They publicly state that they bought a PC because
that way they ware able to copy the wordprocessor from work, and
didn't have to buy a new one. (Well, that was some time ago.
Nowadays people, when asked why they bought a PC, they are surprised
`Is there anything else?'). It's not for nothing that there are _so_
many `third party' manuals. That's _not_ for additional reference...

Please don't blame piracy for Atari's downfall.

Regards,

4548. Re: Bad Ste DMA

Newsgroup: comp.sys.atari.st
Date: 1995-06-13 00:00:00 UTC
From: john@albemuth.equinox.gen.nz
Message-ID: <AADE1A06mrn@albemuth.equinox.gen.nz>
Source record: 163773

> A few weeks ago someone posted the chip number of the Dodgey DMA
>chip for STe. Mine is a first revision STe, the chip number is c025913-38 so
>can someone confirm wether this is the suspect part number.

As I'm the guy who asked the questions a few weeks ago, I've included summaries of what I learnt! I've quoted replies that I got with the '|' character. I hope you can follow all of this! Apologies to those I have quoted but I haven't included attributions.

C025913-38 is the 'suspect' chip. Here are some of the quotes:

|The new layout of the STE did not like the old DMA chips C025913-38
|this must be replaced with a C398739-001A..

|Some people here seem to think that fitting a very old C025913-38
|will work but I have never tried it.....

|The symptom is two bytes missing everywhere. You might get garbled
|files and/or garbled directories, with all the filenames shifted by
|two characters.
|The fail safe method: If your STE doesn't have a C398739-001A or
|C398789-001 DMA chip, you have the "dangerous" one in there. Replace
|by the former of the two Atari chips mentioned (the latter is the PLCC
|case version used on later STE boards).

> If this is the bad DMA chip, is there anything I can do about it
>other than replace it? IIRC the problems only occur after a few hours of
>use, so this suggests to me that, it's a simple heating problem. Could
>this be cured by having a fan or heat sink?

Good question, I asked this question and got varying replies:

|In my case the problem was there even if the computer was started the
|first time for the day (cool) so I don't think a fan will help. But
|then again, that's how it was for me.

|On my spare 1040STf, I have hard drive write problems. I tried moving
|the DMA chips from a good ST to the bad in an effort to troubleshoot.
|With the "good" chips installed onto the "bad" motherboard, I still
|had write problems. The "bad" ST would work fine for around fifteen
|minutes then the write errors would kick in. I would have to
|powerdown the "bad" ST for around 30 minutes for it to write.

|A much easier solution would be to fix a small IC heatsink on top of
|it. This can be gunged on using heatsink compound (if you're not going
|to be moving your ST around too much) or better still, glued on using
|heat conductive glue (available from RS Components in UK and probably

|many other electronics stores).
|IC heatsinks are easy to get and cheap. Look in an electronics shop or
|catalogue. Use the biggest that will fit in the case. Forced air
|cooling probably isn't necessary.

|All Silicon is affected by heat, the input threasholded gets changed
|so it can now see the noise...

>And how come the problem
>dosen`t affect either the floppy disc drive or DMA sound chip? I`ve never
>had corrupt floppies or bad dma sound even after running my Ste for 10s
>of hours in a warm room.

I don't know this. I can also remember a year or more ago, someone
suggesting that the problem wasn't so much to do with the actual chip,
but was to do with the motherboard design and some problems with
tolereances for a timing threshold. A certain batch of chips showed
this up when dealing with disk throughput, whereas the later batch of
chips didn't stress the design so much. I personally don't have the
techinical know-how to know whether this is an extremely useful idea
or a load of rubbish. It sounds good anyway! :-))

I have a chip here which is one of the 'suspect' chips, that I know
has come from a STE that ran a Hard-Drive with no problems for a
couple of years. So things aren't necessarily bad. Problem is, you
don't know until you try!! The answer I got to that was:

|Well that all depends, I would not trust it 100%, I have seen DMA
|chips work for 12 hours but not for 24 hours..

I hope all this is of some help!

Cheers,
John

|>I've got was with boozgem, that let me choose disk b: for the extracted
|>file(s), but then it tried to extract it all on the "source" disk...
|>

If you have a command shell do this:
1) change directory to where you want the files to end up
for example B:/
2) zoo -e a:/archive.zoo

Which command shell is good and will run on a 1mb STe without HD?
And where do I get it (prefferably PD, ftp available).

4550. MagiC 2 for Falcon

Newsgroup: comp.sys.atari.st
Date: 1995-06-13 00:00:00 UTC
From: binder@rbg.informatik.th-darmstadt.de
Message-ID: <3rju4r$q4s@rs18.hrz.th-darmstadt.de>
Source record: 163775

Hi there!

In the next days, I hope to finish the second release of my "MagiC-hack"
which allows MagiC 2 being used on a Falcon030. With the new version, you
are able to:
- warmboot/reset without crashes
- boot from ide/scsi with _any_ driver that runs on Falcon
- use DD-disks
- write DD/HD-disks
- use higher resolutions in 2, 4, or 16 colors with BlowUP or Screenblaster
(other enhancers not tested)

The new Falcon-XBIOS-calls are still missing or only partially implemented
for internal reasons, so you can't run any Falcon-specific software which
requires the new XBIOS-calls. Programs which directly access the hardware
(FalcPlay, for example) will run fine, though.

I want to know if there's interest for this hack in the english-speaking
world, because I'll only write a german doc. If you speak both english
and german and want to use this hack, I'll be glad if you'd translate the
docs for me, since I don't want to do it myself...

Ciao

Thomas

From: msh@mserv1.dl.ac.uk
Message-ID: <3rk1j9$ogp@mserv1.dl.ac.uk>
Source record: 163777

I was wondering if anyone can help me. I have the game Another World and I was testing it the other day on my Falcon. I had a lot of trouble with it but got it to get past the introductory animation (some samples were corrupt) After the animation the screen goes black and nothing happens. I assumed it wasn't compatible with the Falcon and thought I'd have a go on my ST anyway.

To my distress it did the same and didn't work. I looked at the disk I had the problems with (disk A), and noticed a long diagonal line from the edge of the disk to the centre. It doesn't look like a scratch, more like a disk imperfection. It used to work but I haven't played it for nearly a year now. Can anyone help me to replace my disk or give me the address of the makers if they still support it. I don't have any details on the game as I picked it up cheap second hand without a box from a friend selling his ST.

If anyone can offer help as to how I may fix or replace this I would be very grateful. Thanks in advance. Please post responses directly to me.

>Just ask for "30 pin, 1 Megabyte SIMMs" ...

Good advice, Bob, but for a more complete picture, Atari users should know that all the newer Macintosh systems and most newer PC clones (AFAIK) use SIMMs of the 72-pin variety, not 30-pin. And Macs can use parity SIMMs (9 bits) as well since they will just ignore the 9th bit.

Just didn't want some STe user waltzing into a store asking for some Macintosh SIMMs for his STe thinking they should fit.

And BTW, one of the very best places for purchasing SIMMs via mail order is The Chip Merchant, 800-426-6375 or 619-268-4774 in San Diego, CA. New 1Mb 30pin SIMMs, 80ns are currently advertised for $33.50 each. They buy and sell used memory too.

>my Atari? I tried to de'zoo the file on a PC emulator on a HP workstation,

I did the latter always in the past but its a dry task to organise
all unarchived files using a PC, to tranfer them to floppies. Use ram disks
now, and dig out arc'ed app's when I need them from floppy (Still haven't got a
hard drive yet..sigh*%). Also, use mostly lzh and zip'ed stuff - have max
compression (zip being the most). So unzoo the lot on a PC and pkzip 'em.
Use STZIP26 loaded on floppy. Load zip file from floppy & unzip to a ramdisk.
Should be able to cram all that onto a 1040 STFM.

I've recently got NeoDesk and am also wondering about any software
incompatibility that could crop up with MagiC.

According to reviews, MagiC has the edge over Geneva with regard to
efficiency but requires more memory, & the desktop bundled with MagiC, while
serviceable, has less to offer than the one accompanying Geneva.
So, back to the punter's point of view. What say ye all on MagiC v
Geneva?

>message. Thats the reason why i quote this).

Kim, it is YOU who are not paying attention as my comments had NOTHING
at all to do with shareware but rather full COMMERCIAL software. You
rant and rave in your post about the difficulty users have in registering
their software and that's not at ALL what this was about.

It was due to a certain individual (Keith N. Murchison) who was blatantly
advertising his system (a Mega ST2) for sale including a hard disk drive
with "many of the best ST software packages pre-installed including
Caligrapher, Atariworks, LDW Power, WARP 9, SpeedoGDOS, as well as many
popular games, etc." His next post advertised the software alone for sale.
Is it your intent to support this kind of activity on the net???

I was going to quote and counter each of your ridiculous claims that make
excuses in the support of software piracy but believe me... the very LAST
thing in the world I want to do is get into a long, drawn out debate with
ANYONE and their lame rationalizations for theft. Don't waste my time!

I don't care HOW you justify it within the confines of your own mind, but
software piracy is THEFT, plain and simple. It is CRIMINAL activity! If
you want to talk about ways to improve the shareware system, that's one
thing. But do NOT waste your breath trying to rationalize theft to me,
at least not until YOU have tried to earn a living developing software.

END THIS THREAD NOW! Grrrrrrrrrrrrrrrrrrrrrrrrr........

[... Looooong binary file deleted ...]

Good Friggin' Grief!

What does it take to convince people that comp.sys.atari.st is NOT
the place to upload binary binhex'd files?!!

Let us know you have the file and where we can ftp it from or else
post it to comp.binaries.atari.st where these things belong.

Not everyone who uses the nets does so for free and not everyone is
interested in your binary file. All you do is waste their time and
money. Not every news reader is capable of skipping over articles.

Is a little courtesy and consideration for others too much to ask?

> Rich Mier

I have bought one of microvitec multisync monitors that can handle both
RGB and VGA modes. It may not be able to do as high resolutions as VGA
only monitors but it's good enough for me. I couldn't afford two monitors
(i don't have space anyway) so I got one that did everything!

On a slightly related note, does anyone know how to connect a jaguar to
my monitor? I've heard about a catbox (?) but I don't think they are
available here in the UK...

In a previous message, sanders@sci.kun.nl (Sander Stoks) wrote:

> I think piracy is what made the PC today's standard. [...]
>
> Please don't blame piracy for Atari's downfall.

Oh, I don't. Atari's lousy marketing, mis-management, and just poor overall business decisions are -much- more responsible, IMHO. There were other factors, but these were paramount.

But... be very careful in drawing any comparisons in the PC vs Atari markets and the effects that piracy had on both. Software piracy is MUCH more devastating in a tiny market (like Atari) than it is in a huge, world domineering market such as the PC, where it can actually have an acceleration effect on the sales of hardware as you mention.

All I'm saying is that piracy does NOT encourage the continued development of new software for the Atari platform and as the installed user base shrinks (i.e., fewer hardware sales), piracy has an even larger detrimental effect on the already small market.

Atari Mega STe 4/340 TOS2.05
SM124 mono monitor

- 340mb Maxtor SCSI hard disk
- Best Electronics power supply
- Best Electronics upgrade keyboard mylar

Software:

- AtariWorks v.1.207
- SpeedoGDOS (with Bitstream add-on WP for DOS fonts)
- Universal Item Selector III
- Address Book (registered)
- Calendar 6.2a (registered)
- Grocery Lister 4.2 (registered)
- STalker 3.04
- MegaCheck 2.05
- Diamond Back 3
- A few unregistered shareware programs which mainly occupy disk space.

Any other books, sales lit, miscellaneous cool info on Atari, a Wico Bathandle joystick from years ago included as well as the original power supply I replaced with the Best model. I have the original box for the system but not the monitor.
Portland, OR and surrounding areas only, please...
I don't have the means to ship.

$650 cash takes all, no partials, I'm switching platforms and would like all this sold ASAP. The system is in absolutely perfect condition (better than new with the modest upgrades).

The best one is Magic - you can run Logic and SoundDiver together under
MagiC and it works great! I haven't tried Geneva, but EMAGIC recommend
MagiC anyway.

Message-ID: <3rkr2m$fka@news.duke.edu>
Source record: 163794
Cross-posted to: comp.sys.atari.st,comp.sys.atari.8bit

Don't know if this is the best newsgroup, but perhaps someone could point me in the right direction...

I have a floppy disk from an old, old Atari computer, with files that I wish to retrieve. Norton utilities on an IBM PC, as far as I can tell, has no idea how to read from this disk, since it's formatted using 9-bit bytes. No Macintosh to which I have access is able to read this disk, either.

Any ideas? If anyone has (a) an old, old Atari, (b) software that could read from this disk, or (c) any other idea how to retrieve the data, please let me know. Thanks.

The Ste and Falcon Etra Joystick-ports are indentical, and they are also
identical with the Jaguar-joystick-ports! so there is no problems using the
Jaguar-joupad for the STe!

The only thing I can say is: Don't buy E-magic Logic.
Since it's an expensive program, You will probably be stuck with it when You want to upgrade to Logic Audio (if You consider buying a Falcon in the future).
There are lots of problems with Logic Audio - it's not stable according to the people I know, who have tried to make it work. According to E-magic, it doesn't work on all Falcon's (funny since Cubase Audio works fine on all Falcons).
I also have the impression that E-magic won't support Falcon the way one would wish (they seem to be more Mac-happy), but Steinberg still release the new versions of Cubase on Atari first -before Mac and PC.

I know that E-magic works fine on the ST/STe, so if You know that You won't upgrade to a Falcon, it will surely be sufficient. But if You think that You want to start some serious hard disk recording on a Falcon later on, don't even think about anything else than Cubase. Which program You prefer is always a matter of taste, but the only Audio program that runs perfectly is Cubase Audio.

Kindest regards

It is, in fact, the DMA chip that shouldn't be in an STe.

> If this is the bad DMA chip, is there anything I can do about it
> other than replace it? IIRC the problems only occur after a few hours
> of use, so this suggests to me that, it's a simple heating problem.

> I`ve never had corrupt floppies or bad dma sound even after running my
> Ste for 10s of hours in a warm room.

This is probably not the only explanaition, since - in my experience -the DMA problems can occour any time You try to write to the hard drive.
A way to be certain should be to copy lots of files, deleting some and copy more to the drive, and after that defragment the drive. Now You will probably have a totally messed up hard drive. Most of the time it's enough to try to save the desktop two times, since this changes the file and for some reason that seems to be the problem.
I don't remember the part number for the fully functional DMA chip (Ihave a Falcon nowadays so there's no need for me to remember), but I think it was something like: 38..38-001 (I can't seem to remember the two digits between the 38's - my memory is all fragmented...). Your service center should know about it when You ask them.

>they would find useful.

Yes. I think it is great that you are asking the question. There are word processing packages which are either free or shareware, DTP progs, spreadsheets, art progs and off course music packages available. If you would like a few suggestions then the best thing you could do would be to buy a magazine like Atari World and read the reviews.

Personally I like Marcel as a word processor, Calamus as a Desktop publishing programme, Sheet as a spreadsheet and Sequencer One as a sequencer. I also programme in C with a programme called PureC. A sort of Basic comes on the Atari disks which come with the machine.

Anyway the range is enormous though of course a printer would be good although the Atari will read and write to a standard formatted 720K PC floppy so it would be easy to bring work in. No probs with viruses either as the school machines wouldn't be affected by Atari viruses.

Hope this is some help.

Date: 1995-06-13 00:00:00 UTC
From: mss@xs4all.nl
Message-ID: <3rkt3v$ni0@news.xs4all.nl>
Source record: 163806

Hi!

I'm searching for a shop (anywhere) where I can buy Atari SLM804 Toners/Drumkits, I need about 20 of them. I'm also looking for good Atari mouses, like the Yin-mouses.

Does anybody know where I can buy those? Can you give me fax/telephone-number?

Thanks in advance,

Martin Molenaar, mss@x4sall.nl

4582. Geneva Release 004?

Newsgroup: comp.sys.atari.st

I really hate to sound impatient, but when is release 004 of Geneva coming out? I've been waiting anxiously (well, eagerly) for MiNT compatibility especially. IIRC, it was supposed to come out at the end of May. Admittedly, I haven't been home for a while, so a Gribnif newsletter may have arrived there...

Why should there be separate versions, one for the Atari and one for MagicMac?
I always thought that softare written ('cleanly') for TOS will run
on MagiC (and MagicMac) and vice versa?

This seems to be more significant with Linux than with TOS (but I still can't figure out why - same hardware doing the work in both cases.) My son, Jonathan was getting a lot of scsi timeouts - until he checked his scsi drive and found that it wasn't terminated. He did so and now it works just fine.

>
>Questions:
> 1. Is the cable lenght too long? The idea was to eventually move the
> Seagate into a drive case and have the system cable long enough to
> put new connectors on it for another hard drive and a tape drive,
> possibly a CD ROM sometime in the future.

I once had a problem with a particular drive and the Atari dealer switched me from an ICD cable to an Atari cable (or vice versa and I'm not at home to see which way we went) and that took care of the problem. ONly thing I could figure out is that one of the cables has sufficient resistance that it negates the need for termination (or actually fails if you are also terminated - or something like that.) Hard to believe that a cable made a difference.

I currently have a scsi cable that has a HD, 2 syquests and a CDrom on it. Total cable length is probably at least 12' and it works fine on my Falcon out of scsi2 port.

> 2. How do I check for SCSI terminations? I have heard of people
> terminationg the internal SCSI chain as well as the external chain.

I've always opened the drive and looked at it for resistor packs located around the scsi connector. There are also connectors that you can plug into the scsi connector that provide termination. These seem to be popular on the Mac side. It makes a lot of sense if you have more than one machine as you can always use external termination and can easily move devices between the machines without worrying about where in the chain the device needs to be inserted.

>For you Linux users:
> Someone was saying that they were having SCSI timeout errors (danger

See my first comment. My son runs on a TT now and since terminating his 730M drive (the new one toad started selling a couple of months ago) he quite having problems. Haven't seen if that makes his problems on the Falcon go away too or not.

How about setting up a RAM disk & put your .zoo file there. Then on a: only
your zoo dearchiver program. Run your dearchiver from a: and type -e m:\xyz.zoo
or something like that so that it gets your .zoo file from the RAM disk.
(assuming your RAM disk ram is M:)

>BTW, is it possible to decompress files on for example a PC, and use them on

> New question: Is there any reason to buy faster SIMMS? will they speed up
> anything? or will two 30 pin, 8-bit 120ns be the same?

No... putting in memory that can respond faster than your computer can
request it is a waste. It's like putting tires that are rated to go 200 MPH
on your Yugo that can only go 80 MPH anyway.

> New question 2: Where can I get the best deal on these SIMMS?

Almost anywhere that sells computer stuff. The "8 bit" SIMMs are the same
as the Macintosh uses, and the "9 bit" SIMMs are the same as the PC uses.

Just ask for "30 pin, 1 Megabyte SIMMs"... actually speed doesn't much matter,
since it's difficult to buy SIMMs too slow for an ST.

Don't buy them "blister packaged" at Radio Shack or CompUSA. Do buy them from
a local PC supply store... they'll be cheaper. Call around to computer stores.

>yes DEAD....

You seem to like saying this. If you truly believe it, follow this to the logical conclusion right out of this group. After all, it's a waste of time to talk of "dead markets" now, isn't it?

Atari or its replacement (C-Lab) will always have a market as long as Micro$haft, IBM, Apple, etc. are the competition. Not everyone will be so blind and have such a one-dimensional view of things ...

] had corrupt floppies or bad dma sound even after running my Ste for 10s
] of hours in a warm room.

I get crackly DMA sound, but don't have any drive troubles. I've got one of the last model STes off the production line, but it had a faulty PSU, which I swapped for one from an old STFM, it worked better on the FM than on the E, and the FM one works quite happily on this E. The RF-audio output was faulty, but fixed among other minor problems by Roger Sheppard (who, although many will say annoying, is a good diagnostic electrician :).

I wasn't too happy, but when the machine only cost me about $US-250 brand new, I can't complain _too_ much, especially as the people who sold it to me ceased to exist a short while after I bought it :)

Anyway, apart from the crackly DMA sound (even through the monitor, so it isn't my stereo system), the machine runs fine now. I wouldn't have a clue what chip it is, anyone know where the DMA chip is at on a late revision STe? (The type with metal screw-holes molded into the base!)

I'm using IdeaList v3.6, and an old Star LC-10-II 9-pin printer, but no matter how I set IdeaList up, I get huge gaps at the end of the page, resulting in the top of the page moving gradually downwards on each progressive page. I'm using standard 11-inch form-feed paper, and am wondering if anyone could tell me what settings etc. I should use, at the moment it looks like:

```
ContDistance 10
TextDistance 0.50
RestDistance 0.30
Chars/line 80
Lines/page 52
VSteps/Inch 72
```

Changing the Lines/page to anywhere up to 66 and the ContDistance up to 11 doesn't seem to help much - how _should_ I have things in IdeaList itself, and the config file?

>Its Simple, it will not run, you have a STE not a ST.....
>
>[...]
Well, I have to contradict. It is possible to load the TOS into the STE's
memory and to run it. A utility provided with the german TurboAss can
read the TOS-ROMs to a file, patch this file to reassign the absolute
addresses and load the patched file into memory at startup. This does
work even with an STE.
This information comes with absolutely _*NO*_ knowledge about whether it
is allowed to do these things...

I prefer the JRI memory board for reliability and use of SIMMs. You will still
be missing the special features of the STE: DMA sound, Blitter, analog joystick
support (rarely used anyway), hardware scrolling, etc. The JRI board will give
you the STE color pallette if you buy the extra shifter chip.

New host adaptors cost the best part of 100ukp. 2nd hand ones have a
high resale value because a good quality used one is as useful as a new
one. Should be able to pick one up for 50ukp though.

Software is needed - but either is supplied - or in the case of 2nd hand
drives can be obtained via the 'net.

:-)

Roland.

IMO extra ventalation/cooling is always worth a try. I saved my TT a trip
back to the repair shop by fitting an external PSU and leaving the original
fan in case. The video circuitry now no longer flickers after warming up.

Yesterday I had the (short) chance to play around with a Panasonic MO drive (512 Mb discs), sorry forgot to write down the type, but it ran right away with the Hushi harddisk driver (I used the 'old' 5.10, the newer versions dont seem to run very well...) No problem in formatting, partitioning and reading/writing the disk. So I guess a ZIP drive should run as well, but as these ZIP drives seem very hard to get here in Holland I will report as soon as I can lay my hands on one...

BTW, the drive was connected to my TT.

>had corrupt floppies or bad dma sound even after running my Ste for 10s
>of hours in a warm room.

If You are going to use Hard Drives with your STE I recommend
that You change the chip / test it with Hard Drive first.
In my STE everything seems to be ok until I use Hard Drive.
As soon as my STE warmed up (and chips too) problems started.
Atari (Finnish service) didn't belive me that the problem was
in that chip. (I lost much monay for that).
I went to other store where we tried this:
- Opened the machine.
- Started the HD & Machine.
- Put the HD to work (filecopy etc...)(...it could take hours...)
- When DMA-chip warmed up and problems occur we
sprayed cooling-spray to the chip.
- It work again, so We know that it was that chip which was faulty.
- We changed the chip to other one (C398739-001A...)
- Today it works fine with and without HD!

Source record: 163703

Hi there!

I've got a question concerning the hidden rooms in the substation-demo:
I "spot" them when I walk along the walls (on the left side), and then I
turn towards the wall and press space to open them. This normally works,
but it doesn't on level 3 (the part where the exit is). When I leave the
elevator to the left, I see a hidden room, but I can't open it. Is that
a bug or a feature?

Ciao

Thomas

: one. I don't think those computers are very comparable at all; being
: happy with one doesn't mean you're going to be happy with another.
: Well, what I mean: e.g. C-Lab Falcon isn't expensive for people who need
: a Falcon instead of a Macintosh.

Well, I already own a fast Mac; I was interested in getting rid of the 1040ST corpse I have in my basement and replacing it with something more modern - hence the request for a Falcon or TT030. It would be pretty much a hobby machine, though it's a safe bet to assume it would get some fairly serious use at times.

I still can't see how _anyone_ would spend ~$1300 for *ANY* machine that has a paltry 1-MB RAM and no hard drive. It's mind bending.

4620. Re: NeoDesk & MajiC

Newsgroup: comp.sys.atari.st
Date: 1995-06-14 00:00:00 UTC
From: wells_s@ix.wcc.govt.nz
Message-ID: <3rls9d$mfj@golem.wcc.govt.nz>
Source record: 163706

] So, back to the punter's point of view. What say ye all on MagiC v
] Geneva?

I tried Magic with Neodesk 4, but only tried as I couldn't afford it, but
I own both Geneva and Neodesk 4, and they work okay.

Neodesk 4 seems to work flawlessly with Magic, with only problems being
those that the individual programs have (Neodesk 4's redraw problems etc.).
The only problem I found is no obvious way in Neodesk 4 to set a program
to be single-tasking.

Magic is VERY fast, and for speed and multitasking efficiency, I'd say
it leaves Geneva in the dust.

The Geneva/Neodesk 4 combination however seems to be somewhat more compatible,
due to only the AES (GEM) being replaced rather than virtually all of TOS.
It's also quicker to load as it doesn't reboot the machine like Magic
does (which BTW doesn't like the ICD logo for the driver as it makes it
look very strange).

Geneva doesn't multi-task as well, as things like LZH bring the machine
completely to a halt. Also due to some (possible hardware) problem with
my STe, I can't run STalker properly as it crashes for no obvious reason,
I suspect this machine has a defective Blitter or DMA chip. However,
Geneva is more configurable to run awkward programs.

Magic seems to be supported a lot more than Geneva, although I seem
to remember Dan Wilga mentioning a few months back that they have plans
for eventually making Geneva pre-emptive multi-tasking capable (_hopefully_
without needing MiNT).

Either Geneva/Neo4 or Magic/Neo4 work fine, it's just personal preference,
Geneva is more compatible but not as quick, and multitasking isn't as good,
but Magic makes the machine heaps quicker (especially with NVDI), but
isn't quite as configurable and not quite as compatible, although
correctly written programs shouldn't have any problems.

There is an update due out for Geneva and/or Neodesk 4 pretty soon, some
of the extras are MiNT _compatibility_ (dunno about support), and icon-
ification, but I don't know about anything that would make multitasking
better or compatibility with Magic any improved....

I'm quite happy with Geneva/Neo4, if only FZDSTerm multitasked properly
and had VT100, I'd be happy as larry because being unable to use
STalker properly, it's the next best thing.... (Connect isn't to my
tastes).

] Macintosh SIMMs for his STe thinking they should fit.
].....
]
] -Hutch- @ Fair Dinkum Tech

What type of SIMMs will work without modification on my STe? I know they have to be 30-pin, and the same speed (with the overall speed not mattering too much on such a slow machine). But could I rip the SIMMs (say 4x1meg) out of an old 386 and plug them in, or do I want macintosh ones?. Does the STe care if they're 8 or 9-bit? Because if I can use standard PC SIMMs, I can probably get some for virtually nothing....

I'm using 2.5meg at the moment - which is a nuisance, as those also using 2.5meg will know. :) If I can find another couple of 1meg simms, it'd be great!

BTW - Apparently the slot in Falcons _looks_ like a 72-pin SIMM slot, can these things be plugged in?

4626. Help: Mega St won't load Auto folder file/ What's up?

Newsgroup: comp.sys.atari.st
Date: 1995-06-14 00:00:00 UTC
From: "Michael S. McInnis" <mmcinnis@biddeford.com>
Message-ID: <3rmoi2$l7t@noc1.portland.net>
Source record: 163712
Cross-posted to: comp.sys.atari.st.tech,Comp.sys.atari.st

All of a sudden my Mega ST won't load Auto folder programs from one Syquest disk. I'm using the ICD boot system w/ a Link I. Any ideas whats gone wrong....the disk checks out fine using
the ICD utilities. Thanks for your help in advance.

Regards,

Michael

4627. Hard Disk help needed (ICD Utils)

Newsgroup: comp.sys.atari.st
Date: 1995-06-14 00:00:00 UTC
From: jat5@york.ac.uk
Message-ID: <3rn79e$b4a@mailer.york.ac.uk>
Source record: 163713
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi,
I've just received a 210 Meg Hard disk for my Atari ST (520
STFM upgraded to 1Meg). It uses an ICD Host adaptor, and the software
allows *big* partitions (known as BGM partitions).

My problem: The guy I bought it off used it with an STe, and
partitioned the drive with >16Meg GEM partitions. My STFM doesn't like
this!

My question is: Is it possible to re-partition the drive (using the
ICDFMT program) using the same partition sizes (but with BGM partitions
rather than GEM) WITHOUT LOSING THE DATA ON THE DRIVE
****

(I have access to an STe - thats how I know about the partitioning)

I suppose the alternative would be to get TOS1.4....

I would be interested to hear any responses (by e-mail preferably)

Thanks!

john..

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Following my previous message....

When I turn on my STFM, with the hard drive connected and powered up, the screen goes haywire! COnnecting the same drive to an STe causes no problems. The drive is partitioned into 10 parts, ranging from 10meg to 28 meg in size. The host adaptor is an ICD AdSCSI-plus, dating from 1990 - so it should work....

What do I do?!

Thanks

john..

<mms02bj@loqi.elka.pg.gda.pl> writes:
|
| [...]
|
| 3. Where is the nearest to Scarborough (North Yorkshire) System Solutions'
| shop?
|

SFAIK there's only London and Windsor.

| 4. If I buy something in UK (PAK for example) and I take it out of UK, do I
| have to pay English VAT?
|

If you're taking it out of the *EU* (e.g. to Poland) then in principle
you can claim the VAT back: this does involve time and paperwork, which
starts in the shop when you buy. I haven't seen a "Tax Free for Tourists"
sign on System Solutions' ads ... it might make more sense for you to
contact the makers (MW Elektronik?) and see if they would mail to an
address in Poland, without charging MWSt.

Note that if you ever bring the machine back into the EU then VAT will be
payable at the border. Now you know why there are such long queues at
Frankfurt a/d Oder: the customs officials are opening up every ST to see
if there's an untaxed PAK inside ... ;)

From: hutch@ilmen.lanl.gov
Message-ID: <9506141357.AA05548@ilmen.lanl.gov>
Source record: 163717

In a previous article, gs01tph@panther.Gsu.EDU (Tommi Pekka Hietavuo) wrote:

> I just recently read a scientific study (if someone's interested, I'll
> try to find it again..) that showed some interesting results: piracy in
> the U.K. actually _benefitted_ the software industry.

If you can find it, I'd very much like to read that article, Tommi (as
well as the credentials of those who did the so-called 'research').

> What do you think? Was this research rubbish?

Let's put it this way... what do YOU think? Without more information, I
cannot pass judgement, but it certainly sounds suspicious. If it was a
simple survey, then it's lost most scientific credibility right away.
Any actual research would be difficult and expensive if done properly.

I can see how in some very large markets piracy might actually be a boost
to hardware sales but cannot fathom how it would help software sales. The
myth that -most- pirates steal software only temporarily to 'test' it is,
IMHO, just that... a myth. Why buy when it can be had for free?

4632. ATARI CD-ROM FAQ

Newsgroup: comp.sys.atari.st
Date: 1995-06-14 00:00:00 UTC
From: BRARDA@vxclia.cern.ch
Message-ID: <BRARDA-140695160021@128.141.55.218>
Source record: 163718

Here is the new version of the Atari CD-ROM FAQ. The french version and the
html versions will come soon.

Feel free to mail me for all the errors you see (in the contents and also
in the form because I am French and the English language if no my first
one) or for other information that can be interesting.

You can find all the PD or shareware programs for CD-ROMs at ftp.cnam.fr in
the directory : /pub/atari/cd-rom

Loic

New since last version :
- Gamma and Transmission CDs from Whiteline
- Maxon Atari Software Demo-CD
- Another CD-Player 1.10
- CD-Recorder V1.02 (Dirk Haun)
- Chapter about the writing of a CD-ROM
- CD ROM Cartridge
- CD ROM Cartridge II
- Ideal 2.06
- Ideal RTC
- ATAPI-CD Software

Updates since last version :
- Egon CD-Utilities 2.3
- CD Player 1.3 (A. Clauss)
- ExtenDos Pro v2.1

ATARI CD-ROM FAQ

13/06/1995

0 - Contents
1 - What driver should I use with my Atari system ?
2 - What discs are available ?
3 - Can I use Photo-CD on my Atari ?
4 - Can I play Audio-CDs on my Atari ?
5 - How do I program the CD-ROM drive ?
6 - Can I make my own CD-Rom ?
7 - Appendix A : User's configurations

1 - What driver should I use with my Atari system ?

There are several drivers available :

MetaDos :
Free software from Atari Corp.
Available from atari.archive.umich or ftp.muenster.de (metads25.zip)

The filesystem drivers support ISO9660 and High Sierra CDs, but not
multisession CDs.
The device driver only works for the Atari CDAR504 connected to the
ACSI bus or with generic SCSI CD-ROMs connected to the TT SCSI port.
(Answer from Julian Reschke)

CDROM.XFS :
Free software (Copyright 1992,1993,1994 Eric R. Smith, Michael Bernards
u. Gunther Leis)
Available from atari.archive.umich and other ftp sites.

This driver is a Mint extended filesystem and works on TTs and Falcons.
CDROM.XFS version <0.7 does not work with Mint/Multitos > 1.04.
The current version (0.7) is said to work on Mint/Multitos > 1.04.
It seems to be true on TTs but it does not work with any Mint version
on my Falcon.

CD-Tools :
Commercial solution from Hard & Soft, Obere Muensterstrasse 33-35,
D-44575 Castrop-Rauxel, Germany, Phone: ++49 2305 18014, Fax: ++49 2305
32463

Includes MetaDOS with GEM-based installation program, audio player with
PCM audio data import (only some drives) and custom devices and
filesystem drivers (support for Atari CDAR504 and generic CD-ROMs
connected to ACSI through host adapter, TT-SCSI, Falcon-SCSI,
multisession support (only some drives)).
(Answer from Julian Reschke)

With CD-Tools, you also have a GDPS module and the program Scan-It that
can handle Photo-CD Pictures.
Version 2.x countains a driver for IDE drives and ATAPI norm (For the
Falcon and cards with AT-BUS extention).
CD-Tools is in German and costs 99 DM.

CD-Tool jr :
Commercial solution from Hard & Soft

CD-Tools without digital audio copy, GDPS and Scan-It.
CD-Tool jr costs 49 DM.

ExtenDOS v1.21:
Commercial solution from Anodyne Software, 6 Cobbler Court, Ottawa,
Ontario K1V 0B8, Canada.
Available in UK : System Solutions.

Support ST, STe, Mega, TT, and Falcon. Read ISO9660 and High_Sierra
CD-ROMs. It now runs just fine under MultiTOS with no restrictions;
memory protect is OK, and you can run programs directly from CD. It

also runs fine with Mag!X 2.01, with the restriction that the
EXTENDOS.CNF file must be in the root directory.
Support for Multisession Photo-CDs (with Multisession drives).
Configurable cache.

The next update will have an installation/setup program, plus support
for more drives.

Extendos v1.21 costs $29.95(North America).
(Information updated by Roger Burrows / Anodyne Software)

ExtenDOS Pro:
Commercial solution from Anodyne Software, 6 Cobbler Court, Ottawa,
Ontario K1V 0B8, Canada.
Available in UK : System Solutions.

Like ExtenDOS 1.21 with audio support.
New in version 2.1:
- GEM installation program
- Support for multiple CD-Rom drives
- Better audio player graphics

Extendos Pro costs $39.95(North America).

F030_CD :
Fairware from Peter Hilbring, Dietrich Ottmar Stra�e 16, 59597
Erwitte, Germany
Available on ftp.tu-clausthal.de
(/pub/atari/falcon/systools/f030_cd.zip)

This package includes a BOS driver for MetaDOS, MetaDOS 2.3, a
low level SCSI driver (TT & FALCON) and a program named
cd_explorer as exemple of the access of the low level driver.
(Info from Vincent Lefevre)

I�ve just tried these drivers on my falcon with an Apple
CD-300 cdrom and it works without problem.

ICD Pro :
Old versions came with a MetaDOS driver named ICDCDROM.BOS.
The new ones comes with a mint extended filesystem.

Egon CD-Utilities 2.3:
Commercial solution from EDV-Service Bontenackels, Fronhofstrasse 7,
52146 Wurselen, Germany; Tel.: 02405-72307; Fax : 02405-74369
Available from Fair-Forum german shop

Multisession MetaDos driver with audio-CD player.
Works with ST(E)/TT/Falcon.
ISO9660 and High Sierra.
Program and CPX for Audio Play.
Audio track to Hard Drive copy in AVR or DVS format.
Support of the Pure C Metados Library.

Egon CD-Utilities costs 79 DM.

The version 2.3 seems to be stable but slower than CD-Tools
(Tested in ST Computer).

CD-ROM ROM:
FromCompo (Tel.: Germany : 030-623 82 92; Holland : 04454-6 38 88;
Switzerland : 01-784 89 47; France : 1-47 35 89 66; UK : 0487-35 82;
USA : 415-35 50 862)

It's a Driver plus an interface witch can go in the cartridge port of
every Atari computer and can handle IDE CD-ROM drives.

In Germany, CD-ROM ROM costs 150 DM.

ISO_FS :
From Erling Henanger <erlingh@idt.unit.no>

This new Mint/Multitos CD-ROM driver will be released as shareware as
soon
as mint 1.11 is released.
- FAST
- Supports several mounted CDrom drives.
(ie. CD-shifters or just more than one drive)
- Works on Falcon and TT scsi + acsi.
- Supports rock-ridge extensions (Long filenames on CD-roms that
are made with this in mind - like the GNU/X11 CD-rom)
- Is made ready to do disk-transfers in the background as soon as
mint is up to it.
It comes in two parts :
- A generic scsi/acsi driver that talks to the
hardware.(scsi.xdd/acsi.xdd)
- The filesystem itself.(isofs.xfs)
In addition it comes with a GEM based configuration program.
Limitations:
- It needs mint.prg with a version number >= 1.08

CD ROM Cartridge:
From Gellermann & Fellmuth, Frankenbergstrasse 38, 12589 Berlin, Germany
Tel.: 030/6480479; Fax: 030/6481271

It's a Driver plus an interface witch can go in the cartridge port of
every Atari computer and can handle Mitsumi FX001 or Sony CDU33A CD-ROM
drives.

CD ROM Cartridge costs 129 DM.

CD ROM Cartridge II:
From Gellermann & Fellmuth, Frankenbergstrasse 38, 12589 Berlin, Germany
Tel.: 030/6480479; Fax: 030/6481271

Like CD ROM Cartridge for the ATAPI-IDE drives.
CD ROM Cartridge costs 159 DM.

Ideal 2.06:
From Gellermann & Fellmuth, Frankenbergstrasse 38, 12589 Berlin, Germany
Tel.: 030/6480479; Fax: 030/6481271

IDE interface for hard-discs and ATAPI-IDE cd-rom drives + upgrade to
TOS 2.06 (without ROMs). Works with every STs.
Include HD-Driver and CD-ROM Software.
Ideal 2.06 costs 89 DM.

Ideal RTC:
From Gellermann & Fellmuth, Frankenbergstrasse 38, 12589 Berlin, Germany
Tel.: 030/6480479; Fax: 030/6481271

Like Ideal 2.06 with a Real Time Clock instead of the TOS 2.06 Upgrade.
Ideal RTC costs 149 DM.

ATAPI-CD Software:
From Gellermann & Fellmuth, Frankenbergstrasse 38, 12589 Berlin, Germany
Tel.: 030/6480479; Fax: 030/6481271

Driver for 2 ATAPI drives on IDE bus. Works on Falcon and with
Gellermann & Fellmuth interfaces.

ATAPI-CD Software costs 39 DM.

2 - What discs are available ?

There are now a lot of Atari specific CD-ROMs :

GEMini CD-ROM :
From Walnut Creek CDROM, Suite 260, 1547 Palos Verdes Mall, Walnut
Creek, CA 94596, USA, Phone: +1 510 674-0783, Fax: +1 510 674-0821,
Email: info@cdrom.com, Ftp: ftp.cdrom.com
Available in Germany from Ingenieurburo Praefcke, Holtzvogtkamp 55,
24220 Flintbeck, Phone: (04347) 7531.

You can find the index of the GEMini CD-ROM on atari.archive.umich.edu.

Bernd Lohrum CD-ROM :
From CD-Service Bernd Lohrum, Blumenstrasse 25, D-66482 Zweibrucken,
Germany,
Phone: (0171) 4210222; Fax : 063 32/127 57

There are two CDs from Bernd Lohrum :
Drachenstarke software : 300 Mb
Tigerstarke software : 500 Mb

Each CD-ROM costs 69 DM (59 DM for MAUS net users).

A third CD has been realesed by Bernd Lohrum : Die dritte ATARI

- Whiteline CDs :
Available from Delta Labs Software, Rembrandtstrasse 1, 42329 Wuppertal,
Germany

There are now 3 Whiteline CDs :

Alpha:
Sharewares and PD, 500 TrueType fonts, Atari Linux.
4 registered versions from the whiteline soft series.
Costs 69 DM.
Gamma:
Sharewares and PD, 1000 Calamus fonts.
6 registered versions from the whiteline soft series.
Costs 79 DM.
Transmittion:
The ultimate and complete FALCON demo, game and utilities CD as says whiteline. Contains demos from the Fried Bits 3 party.
Costs 49 DM.

Maxon CDs :
From Maxon Computer, Industriestr. 26, 65734 Eschborn, Germany
Tel : (06196) 481811
There are 2 CDs:
- Maxon CD :
More than 2000 programs from the ST-Computer-PD-Series (All the discs up to No 704).
Disko PD Database
Crazy sound junior
Demos from Maxon products : Twist, Route_it, Circu_it, Harlekin III, Winrec and Wincut.
The CD costs 59 Dm.
- Atari Software Demo CD :
A lot of german softare demo versions:
Calamus SL, Harlekin 3, Kobold 2.5, Papillon, Twist 3, Abacus, CircuIt, RouteIt, Crasy Sounds, DA's Layout, DA's Picture, DA's Colour system, DA's Repro, DA's Vector pro, Formula, Marsu, Morpher, MultiTEX 5.4, Papyrus, Phoenix, Postfix, Pure Pascal, Script 4, Tempus Word, Twilight.
A part of the CD has a Macintosh filesystem with the MagiCMac Demo and a multimedia application named MaxonMagiCTour.
Also 100Mb of fonts, pictures et textures.

Costs 25 Dm.

Wohlfahrtstatter CD-ROM :
From Wohlfahrtstatter, Irenenstr. 76c, D-40468 Dusseldorf, Germany,
Phone: (0211)429876.
This CD-ROM costs 89 DM.

Power CD Volume 1 :
This is the first CD offering from COMPO software. This disc, although almost completely German, contains a wealth of PD/Shareware software, a healthy Falcon section, commercial demos, 592 GIF picture files, 120 MOD files, and more.
This CD-ROM costs 79 DM.

Atari Mega Archive :
From Systems Solutions, Brandt Fernandes (Europe) Ltd, The Desktop Centre,

17-19 Blackwater St., London SE22 8RS., England;
Tel.: +44 181 693 3355; Fax : +44 181 693 6936;
Email : rperry@cix.compulink.co.uk or gdrayson@cix.compulink.co.uk

This CD is composed of the vast majority of the Atari archive at
umich.edu.
The only things missing are the 8bit section and the GNU minix tools
(whose
filenames are difficult to convert to 8.3 format). The disk contains
some
480Mb of compressed programs, and a further ~115Mb of .mod files which
(hopefully) can be played direct from the CD.

The CD cost 29 pounds (with VAT & Posting). Systems Solutions can take
credit
cards etc. which ought to make things easier for you lot, and they're
used to
importing/exporting, so they're more likely to get it right.

(Text taken from the announce on a.a.u.e)

The Crawly Crypt Collection (American):
From The Crawly Crypt Corporation, P.O. Box 23, Webb City, MO 64870
United States

The Crawly Crypt Collection is the first American PD/Shareware CD to
be published in almost a year. The CCC is packed full of not only the
best new PD and Shareware software, but also the must have classics
and the lost treasures that belong in every software collection! The
CCC has done away with the concept of duplicate compressed versions,
and used that saved space to include more software! The CCC boasts a
wide assortment of software, good file descriptions, and an impressive
falcon section (over 120 Mb).
Costs $29.99

Skyline CD:
From Michael Wehner
Available from CYBERCUBE RESEARCH LTD., 126 Grenadier Crescent
Thornhill, Ontario, L4J 7V7

The SKYLINE CD comes with its unique own database/indexer program for
instant access, allows the execution of virtually all applications by
simply pressing a button, features built-in *.FLI and *.MOD players,
hundreds of the latest in shareware, PD and animation files, as well
as a copy of the TEMPUS Word Junior wordprocessor.

The Skyline CD costs 59 Dm ($40 from Cybercube)

Two Volume CD from Suzy B's :
From Suzy B's Software, 3712 Military Road, Niagara Falls, NY 14305
Tel : 716-298-1986

The complete software library from Suzy B&#65533;s Software is being released
in a two volume, 11,000 file, 1,300 meg CD collection.
Each file is individually described, sometimes with a description
reaching over a page (the main catalog is over 3.6 megabytes of ASCII
text!). The files are grouped in such ways as to allow you to easily
buzz through the CDs. There are 51 separate categories, and each file
within a category resides in its own folder, with a catalog
description within each folder. Since all of the files are
uncompressed, you can run them directly from the CD, saving a lot of
hard drive or floppy disk space!

It costs $69.95.

One other CDs will come out soon :
- Demo Mania CD from Akzente Computer, FrauenStrasse 40, 890783 ULM,
Germany
Demonstration versions of commercial software.
Costs 19.95 DM.

You can also use all the ISO-9660 CDs that exists for the PCs. You won&#65533;t
run the PC programs but you will access all the text, pictures, and sound
files on it.
Le fichier CDLIST.ZIP contient une liste de plus de 700 CD-ROMs pouvant
etre
exploites sur Atari, soit grace a des visualiseurs d&#65533;images ou
d&#65533;animations,
soit grace a des programmes developpes sur Atari.
Ceux ci sont pour l&#65533;instant au nombre de deux :
MOST:
Brian Grier Perkp&#65533;s program. (MOST.ZIP, the demo version is on ftp at
Atari.archive.umich.edu).
For the Compton&#65533;s New Media M.O.S.T. CD-ROMs:
Doctor&#65533;s Book of Home Remedies
KGB-CIA World Fact Book
The Pill Book
The King James Bible
U.S. Presidents
&#65533;
SARA:
SARA is an acronym for Search And Retrieval Atari. Simply put, SARA
programs are written to access specific DOS and Windows CD&#65533;s which Atari
users cannot otherwise read by conventional means, i.e.: doubleclicking
on a CD-ROM Drive icon from the desktop, in order to read, copy or view
file specific data. The accessible CD&#65533;s generally store their
information quite cryptically, so that DOS and Windows users must make
use of the proprietary search and retrieval engine which installs itself
on the PC owner&#65533;s hard drive. SARA replaces that proprietary search and
retrieval engine (for Atari users), and permits owners of TOS 2.05/06 -
4.04 to run the appropriate SARA program (specific to the CD) to read
text, search for information, view graphics and listen to associated
sounds. SARA provides a simple, familiar GEM window and Menu Bar as well

as keyboard shortcuts. SARA programs also allow printing of individual articles, saving of articles and GIF's to disk, most pre-existing Hyperlinks within articles, display of articles related pictures. As of June 1995, the current list of SARA accessible CD's is: The Software Toolworks Reference Library v2.0.0, The CD-ROM Deluxe Toolworks Referenc Library, The 1992 Wayzata World Factbook, Time Man of the Year 1992, The Powerhouse Art History Encyclopedia, Grolier's Multimedia Encyclopedia v6 release, Sherlock Holmes on Disk, Shakespeare on Disk, 1994 Total Baseball, Audubon's Multimedia Mammals, Audubon's Multimedia Birds, Martin & Porter's Video Movie Guide, Better Homes and Gardens Cookbook, Parenting: pre-natal to pre-school, 1993 Total Baseball, and The Family Doctor.

SARA software usually requires TOS 2.05/06 or higher, a screen resolution of 640 x 480 x 16 colours, 4 megabytes of RAM, ExtenDOS, hard drive. SARA programs are happiest on TT's and Falcons running VGA monitors. Some users of TOS 1.60/62 and monochrome monitors have had very good results with text only - 4 meg of RAM is still necessary.

SARA software is a trademark of Proton Research and Peter Zalesak. SARA software can be obtained through ABC Solutions in Toronto, Canada:
ABC Solutions
601-2904 St. Clair Ave. East
Toronto, ON
Canada
M4B 1N7 e-mail: hcarson@io.org or howard.carson@canrem.com
Telephone: 416-752-2744

It's All Relative
2233 Keevan Lane
Florisant, MO 63031
U.S.A.
e-mail: greg@genie.com
Telephone: 314-831-9482

Compo sells a cd-rom from Bitstream with 500 Type 1 and True Type Fonts for 99 DM. Looks great for Speedo-GDOS v5 and NVDI 3.0 owners.

3 - Can I use Photo-CD on my Atari ?

Of course You can !
To have full use of the photo-cds, you'll need a multi-sessions drive and driver and also a program that can handle PCD files.

CD-TOOLS :
The driver from Hard & Soft can read multi-sessions discs and have all the needed stuff to handle the Photo-CDs.

ColorDisc PCD :
Commercial software from Color Concept, Im Alten Breidt 4, D-53797 Lohmar Breidt, Germany, Phone: (02246) 7132

This program allows you to manipulate the photos on your Photo-CDs, and save them on hard-disc. It handles Portfolio CDs.
If my understanding is good, it works with metados and a special BOS file (both included).
It also includes a CD-Audio player.

A demo version is available at ftp.tu-clausthal.de.
ColorDisc PCD works on TTs and Falcons and costs 99 DM.

Studio Photo :
Commercial software from Eurosoft.
This french program can manipulate Photo-CDs.

Gemview v3.xx :
Shareware from Dieter Fiebelkorn, Gr&#65533;ner Weg 29a, W4370 Marl-Brassert, Germany, Email : fiebelko@bonny.informatik.uni-dortmund.de

Gemview is also capable of handling PhotoCD&#65533;s. Only in two resolutions (Base and Base/4 I think)
The Gemview v3.xx license costs 40 DM.

4 - Can I play Audio-CDs on my Atari ?

Of course You can !

The following programs are available :

CD-Player V1.3:
Freeware from Alexander Clauss, Stresemannstr. 44, D-64297 Darmstadt

AUDIO-CD Player for ATARI ST/STE/TT/Falcon with MetaDos.
Database with song list. Copy of the audio tracks to the hard disc into sound files(DVS, AVR, WAVE, SND ou AU). Now works with F030_CD (but not with my Apple CD300).

CD-TOOLS :
The driver from Hard & Soft includes a player for CD-Audio discs. The drive must understand SCSI2 instructions(Or CDAR504 or the Apple CD150).

ColorDisc PCD :
It also includes an audio Player.

Audio CD Master 3.3 :
Commercial software from It&#65533;s All Relative Software, 2233 Keeven Lane, Florissant, MO 63031, USA.

This program can play CD-Audio discs on SCSI2 and Nec drives. On falcon and with some drives, it allows you to control and pipe your CD audio sound into the Falcon for DSP effects using software like the Audio Fun Machine that comes with your Falcon 030.

Audio CD Master 3.0 costs $29.99 US, postpaid, worldwide.

Audio CD player 2.0 :
Older shareware version of Audio CD Master 3.0 from Nima Montaser, P.O.

Box 52127, Ottawa, Ont. K1N 5S0, Canada

Does not work on my falcon.

Egon CD-Utilities :
This package contains a program and a CPX for CD-Audio Play and allow
the
copy of the audio tracks to the hard drive.

ExtenDos Pro :
This driver contains a program to play CD-Audio.

AudioStreams:
From Erling Henanger <erlingh@idt.unit.no>

- Includes a CD-database that will recognize CDs and favourite
tracks.
- Works as program or accessory, with or without mint/multiTOS.
- Works on TT and Falcon scsi ports.
- Should work on ST�s with ICD�s SCSI-2 capable host interface, but
this is not tested.
- Works on all SCSI 2 compatible CD ROM drives, as well as Pioneer
and AppleCD 150 drives. Can be configured to work with any CD ROM
device through external drivers. Drivers can be made with a
supplied compiler program. They are made from simple ASCII files,
and example files are included for SCSI 2 and AppleCD.

WinRec 1.4 et Winrec Pro:
From Andreas Binner, Eichholzstrasse 12, 90587 Veitsbronn, Germany
Email : andreas_binner@n.maus.de

Winrec 1.4 is a shareware and Winrec Pro is the commercial version with
more functions. The main function is direct_to_disk.
They now containsan CD-AUDIO player that works with MetaDos.
The Winrec 1.4 license costs 30 DM.
Winrec Pro costs 129 DM.

MusicChannel 1.51:
Shareware from Stephan Bold, Paray-le-Monialstr. 16, 67098 Bad D�rkheim,
Germany; Email : stephan_bold@lu.maus.de

CD-AUDIO player and �.MOD� selector.
Works with MetaDos and Paula.
Also contains a CD-AUDIO database.
The MusicChannel 1.51 license costs 10 DM.

Another CD-Player 1.10:
Freeware from Christian Mittendorf, Mejerigatan 2-1333, 41276 G�teborg,
Sweden; eMail: chris@ostkupan.ct.se

A new CD-AUDIO player for ST/STE/TT/Falcon witch works with the driver
F030-CD. Works as application or accessory.

CD-Recorder V1.02:
Freeware from Dirk Haun, Europastr. 8, D-64569 Nauheim, Germany
e-mail: Dirk Haun @ WI2.maus.de (MausNet)

With this program, you can transfer digital audio datas from a CD to
an hard drive on AVR or WAV files.
Works with MetaDos and a driver and a drive witch both accepts the audio
commands.

5 - How do I program the CD-ROM drive ?

Some bindings exists to access the cd-rom drive. They can be found on
ftp.muenster.de (under \pub\atari\Programming\CDBIND01.ZIP).
They can be only used with some drivers (CD-TOOLS and ExtenDOS can be used,
CDROM.XFS not).

6 - Can I make my own CD-Rom ?

Yes.
CD-Service Berndt Lohrum (Blumenstrasse 25, D-66482 Zweibrucken,
Germany; Telephone: (0171) 4210222; Fax : 063 32/127 57) sells a programm
for TT and Falcon to drive CD-Roms Writers.
The prices are :
CD-Recorder 1.0 (Soft) : 598 DM
CD-Recorder with Phillips CDD522 : 4298 DM
CD-Recorder with Yamaha CDR100 : 5698 DM

They can also transfer SCSI disc, a Syquest or DAT tape on CD-ROM for 129
DM.

7 - Appendix A

These are some users configurations :

TT, MultiTOS 1.04, CDROM.XFS
TT, MultiTOS 1.08/9, CDROM.XFS v.0.7
TT, MetaDOS

These do not work:

TT, MultiTOS 1.08/9, CDROM.XFS < 0.7
TT, MultiTOS, MetaDOS

Drive : NEC Multispin, external (84-1).

Discs : GEMini Atari CD ROM from Walnut Creek
Clipart Warehouse

MSTE -> ICD MicroSCSI -> ICD AdSCSI+ -> NEC CDR-37
but the first host adapter in the chain has nothing to do with driving the
CD-ROM, its for a hard disk. The AdSCSI+ also has a hard disk running from
it as well as the CD-ROM

Drive : NEC CDR-37

Software :

ICDCDZ2.XFS as supplied on the ICD Pro utilities disk. This only seems to work under MiNT <= 1.04. None of the other freely available CD-ROM drivers (MetaDOS etc.) seem to work. I haven't tried Extendos or CD-Tools.

For audio playing, I'm using Nima Montasser's 'Audio CD Master 3v0'. This is the commercial release of the AUD_CD20.ACC audio CD player. Both work fairly well for me, but I haven't got all the features to work yet.

In order to CD Player configuration to work (the default NEC CDR-37 one didn't work! with AUD_CD20.ACC) I contacted NEC(UK). They very kindly sent me a copy of their 'SCSI 1 Spec' free of charge. This is a 90 page photocopied document which lists all the SCSI 1 commands for a CD-ROM and what they do. I'm sure its pretty out of date now, especially as NEC must be onto SCSI 2 by now.
I used the SCSI.PRG from the ICD Pro disk to send SCSI commands to the CD-ROM to get the combination right.

Atari Falcon030, 4MB RAM, 127MB Internal IDE drive, 270MB external SCSI drive, Viper 105S Tape Streamer.

Drive : NEC 2xi

Non-working drivers: MetaDOS 2.3 (no BOS drivers for Falcon).
ICD Pro Utilities (didn't see the drive at all).
Atari CDROM driver, v0.6 (gave read errors).

Working drivers : ExtenDOS v1.11 (commercial, available in the UK from Systems Solutions, price about 30 pounds).

Discs : Gemini Atari CD-ROM.
Cover disk from a PC CD-ROM magazine. The files read OK, but obviously the PC-specific executables do not run. I got loads of TIF pictures etc off of this disk.
The NEC 2xi is about the same price as an Apple CD300 (160 pounds + VAT). But people seem to have had less hassle getting the Apple drive running. I chose the NEC because is an internal drive, so slotted into my mini-tower comfortably.

TT030 4 Mb ST Ram, 4 Mb TT Ram, 210 Mb HD
Mint (1.04) + MultiTOS

Drive: NEC 210 (also known as NEC55j?)
(double speed SCSI internal drive)

Driver: CD-Tools 1.08 from Hard&Soft Computerzubehor GmbH

DOS discs tried: - The Best of Demo (Comptec Multimedia)
contains lots of GIF/BMP/MOD/TXT files
- Monster Media issue 2 1993 (by Monster Media?)
contains also lot's of GIF/BMP/MOD/TXT files

- TOP 101 shareware programs (came along with the drive)
hardly usable, only DOS stuff.
- Music Box 1994 (Powersource inc)
tons of MOD and VOC (about same as WAV) sound files.
Atari discs tried:
- DTP Grafiken (by Werbedesign Schutz)
contains tons of clipart files in IMG and (DOS) PCX
format, disc was made for Atari and DOS

Other drivers I've tried are several earlier releases of Metados from
Atari, a modified Metados for the Falcon and some XFS drivers for
Mint/MultiTOS (ICD and Atari).

Most of them work OK but for some discs (for example the DTP Grafiken disc)
the older drivers cannot cope with the large amount of files in a
subdirectory (with DTP Grafiken there are folders with over 700 files!)
Clicking on the folder icon just doesn't open the folder
The driver from Hard&Soft seems to work for all of my current CD-ROM discs.

The XFS driver for Mint/MultiTOS is slow The Metados drivers seem to
buffer much more data, problem with Metados is that it's supposed NOT to
work with Mint/MultiTOS. However, I haven't got any problems yet.

TT030, MetaDos, Apple CD300
But it seems that the TT does not recognize a media change, and I get
some "not-responding" messages. After clicking <CANCEL> the loading is
performed perfectly.

```
>I chose the NEC because is an internal drive, so slotted into my
>mini-tower comfortably.
```

It is very easy to remove the Apple CD300 from it's casing. It just holds
an Sony CDROM player which can then be mounted in a tower without any
problems.
(I've done so) The casing can then be used to hold a old HardDisk which was
left
over from a upgrade to be able to transfer data between friends (Works
perfectly!)

```
PS. I bought my Apple CD300 here in the NL for about Fl.470,- which is ca.
$250
-----------------------------------------------------------------
TT, MagiX 2.00, MetaDOS 2.30
-----------------------------------------------------------------

Thanks to all the users that mailed me their experience.
```

I have a mega-2 St I'd like to sell. I got it origionally as a
development machine, but never had the time to do much with it.
It has a color monitor, 20Mb (I know, very small) hd, a frame grabber,
laser C (including profiler), modula-2, two versions of prolog,
a word processor, degas elite, and some games that come with it.
It also comes with some of the Abacus ref. books such as the
Gem Programmers Reference manual. I'd like to sell this as a package
if possible. Please reply to my e-mail. If this isn't the place to
post this please accept my apologies in advance.

Regards
Mike Benner
mbenner@nt.com

P.S. This is one of the few that were upgradeable to 4Mb on the
system board.

Exactly what kind of Atari computer is this? And what kind of drive is it
from?

>no idea how to read from this disk, since it's formatted using 9-bit bytes.

Never heard of a 'disk formatted with 9-bit bytes', the earlier Atari drives
like the 810 and 1050 used FM format on their disks, and I believe you have
to have a controller on your PC that can handle this, most of them are MFM,
and only support MFM, but some are able to handle FM. There is several
utilities that will allow you to read your FM formatted Atari diskettes.
Also there were some Atari drives which used MFM format, like the XF551 and
I think it is possible that the Percom's did as well (can anyone confirm
that?) use MFM. Look on atari.archive.umich.edu under /atari/8bit, you
will be looking for something called util or something like that, it should
be in a zip archive.

>Any ideas? If anyone has (a) an old, old Atari, (b) software that could

Again what is an old, old Atari? The only thing I would think that you are
talking about is an Atari 8-bit which would cover 400, 800, 600XL, 800XL,
1200XL, 65XE, 130XE, and XEGS. (Not even thinking about hybrids and
prototypes like the 1200, or the 1400XL, 800XE).

Now if this is from a 520ST, a 1040ST, or so on then they are MFM formatted
and I heard that they are easily readable from MS-DOS machines.

4639. Terminal scrolling problem

Newsgroup: comp.sys.atari.st
Date: 1995-06-14 00:00:00 UTC
From: Andrew Silver <andy@shelf.demon.co.uk>
Message-ID: <803156682snz@shelf.demon.co.uk>
Source record: 163725

I have a problem when connecting to Demon's irc server via telnet,
no doubt caused by the fact that the terminal type vt52 is incompletely
implemented (big words :->). When attempting to scroll, it just *doesn't*
and just repeatedly inserts the newest line on the bottom line.

a) Is there an ansi.sys style prog I can put in my auto folder to
give a more capable terminal (ansi?)

b) Is there a better choice I can make when irc prompts for the terminal
type?

Answers and/or suggestions to both would be appreciated.

Andy.

p.s. Sorry this looks so formal, but I'm sober today :-)))

>that a programer uses something like ST Writer to make the file and
>then compile it? I'm in the dark about a lot of this.

There are a number of editors which would be better than STWriter as
that is really a Word Processor. Proed is good as it writes flat ASCII
files and if it is all linked up using a shell like Tomshell then it
runs very nicely. I have found the book that I found was best for C is
a book from Dabs Press called C. ISBN1 870336 16 X. There are a
number of books on programming the ST. Abacus do a good range.
Hope this helps.

NetBSD, not FreeBSD. The latter is i386 only. NetBSD has been ported
to several platforms. Stability is good, but no X support. The full
distribution (source and binary) is available from ftp.netbsd.org
and some (not all) mirrors. Binaries are also available at
ftp.phil.uni-sb.de.

The problem is, that the faulty DMA chip can not handle fast harddisks.
Floppy and/or DMA sound works well - also with the faulty chip.

Ciao...

: I'm wrong). What's the size of your drive?

The AHDI 6.06 (and older versions I believe) can handle partitions up to 32meg. After that, they use BigGEM, which goes up to 512meg, but has bigger sector sizes - not a problem, since you won't be having many small files.

>
> I am no expert on this, but don't you need to have a printer driver or printer
> fonts or at least setup the printer fonts for this?
>
> William
>
Thanks for a response :-))

Er I don't think this is the answer as Speedo/NVDI doesn't use printer fonts
but it does have a printer driver 'PINPRN.SYS' which lives in C:GEMSYS
This works fine, I have used Fontchk2 which prints a test page of installed
fonts and set margins. Everything is set OK.

I now wonder if this is some sort of TOS or memory problem, I saw at the
Spotlight show WF2 + NVDi3 working together on a Falcon. But the same don't
work for me! (I haven't got OASIS to install because of tos error #34
unable to find file xxx) Just how does the failings of tos 1.2 manifest
themselves anyway? ALSO WF2 seems to grab all available memory (2megs or so)
If either of the above are the prob then I would have to :

buy more RAM or buy tos 2.06/MagiC

BUT I would rather not if I don't have to !

Anyone else have a clue? Please...,

I'm trying to find an internet site (Telnet, WWW, etc.), that I can pick up Atarinet. All I can get locally is FIDO, and haven't been able to pick up Atarinet for a couple of years now. Surely theres at least one BBS with both Atarinet and Internet access?

Any help would be appreciated!

Anthony Watson

: >I'm wrong). What's the size of your drive?

: You're wrong, indeed. The maximum partition size with AHDI is 256 MByte
: with TOS < 1.04, 512 MByte with TOS < 4.0 and 1 GByte with TOS 4.0 or with
: the MagiC multitasking operating system.

I remember from "years gone by" that AHDI has theoretically been able to use partition sizes up to 512 MB e.g. on a TT - but some bug somewhere reduced this to 256 MB in practice. I only know that when trying to partition a 1.1 MB Hewlett Packard SCSI-drive on a TT, AHDI had some serious trouble (I used 5.x) - and therefore I had to do the partitioning with SCSITools - or something else. Can't remember the whole episode too well anymore, but something weird happened...

One can't be too careful when using new drivers; I've had far too many nasty surprises - especially with ICD and HUSHI drivers. Great drivers, those - but older versions just didn't like 68030 and/or Falcon at all. I've been happy with HDDriver (could someone E-mail me the newest version, if that's not illegal?) and before that, AHDI 6.061. Both seem to work without problems.

Greetings,
Tommi

Because the faulty part in the DMA only concern the harddisk. As you already
suspected it's a heating problem, (at least that how it looks). But you can't
do anything else than changed the chip. I doubt a fan would make it
possible/realiable to use it at all.

I really understand you. I got a faulty one myself. (got two STE's and
got two faulty ones.. Talk about luck. One has been fixed though, the other
is beeing used without Hd).

>their software and that's not at ALL what this was about.

I think you misunderstood my writing to you. I did refere to my BBS
package i'd bought, didn't i. And this package is indeed commercial.
I did order this package only from a written mail which was send round the
NeST net/Fidonet whatever net. I did pay damn lot of money only to get
a BBS package that had alot of bug's (totally unuseable on the Falcon).

I have told you all this before, so i wonder why you start screaming like
that now.
What i meant to say with this, is only that you should be very carefull
with blaming the users/pirates for the lack of development on the commercial
side. With enough experiences like mine, i would say a person who continues
to support commercial programs like that, is totally stupid.

True i did involve Shareware as well in my message. But thats because i
believe piracy concern shareware as well. Second because i have already
giving my opinion about commercial programs, especially in a country where
it's impossible to even get near a commercial program, legally!

>
>It was due to a certain individual (Keith N. Murchison) who was blatantly

Not at all, unless they're all originals ofcouse!

>
>I was going to quote and counter each of your ridiculous claims that make
>excuses in the support of software piracy but believe me... the very LAST

Perhaps you should have done that anyway, cause it seems to me you didn't read half of it!

>I don't care HOW you justify it within the confines of your own mind, but
>software piracy is THEFT, plain and simple. It is CRIMINAL activity! If
>you want to talk about ways to improve the shareware system, that's one
>thing. But do NOT waste your breath trying to rationalize theft to me,
>at least not until YOU have tried to earn a living developing software.

Software piracy is theft allright. But in my example with the BBS package you just tell us all, who is stealing from who ?

>
>END THIS THREAD NOW! Grrrrrrrrrrrrrrrrrrrrrrrrr........
>

Sure Hutch, everytime i see you don't agree with someone, you ask to end this thread. Howcome you simply can't face the fact, that other people are seeing things differently.. Perhaps it's because they got more experiences with the threads from the other side of view, which is one thing you don't seem to accept.
Pehaps you had a rough time selling your programs Hutch, and i feel sorry for that. But turn around and start ask yourself, if you really did enough to distribute your software, or perhaps if your software really was good enough to pay what you wanted, or perhaps not that many people really needed you program after all.
I'm getting sick and tired of hearing software developers scream about piracy everytime they have developed something. They simply send their programs out to the market, and when they don't get enough money, they start scream about piracy. It just seems to damn easy for me! As an developer, you have to count on losses, if you don't, then it's you who got a problem.
Every computer market got piracy, and you can't do a damn thing about it. You can however try lowering the number of pirates, but you have to accept there will always be such people around. If you stop developing because of this, you not only kill the pirates, but also the whole market. It as simple as that. Face it!

And for the last time! I do NOT support piracy. I accept it, and in some ways understand it as well. But i DO NOT! support it. I do not ask you to understand this, just accept my opinion, as you seem like you don't have a clue what you're talking about, and you'll never understand it untill you have felt it on your own skin what it means to be left out on all kinds of support!

I have to pay at least $4000 a year to keep myself, my country and my users up to date about whats going on around our market. I get absolutly nothing in return for this (except for the information ofcouse). This is what it takes to get support in a country which has been left out in the cold!
And you can add that cost to what i pay for my software. You just tell me how many people are doing things like that.

Now, perhaps this is something you can understand. I'm getting rather tired of trying to explain the same things over and over again to you. Things you should have known yourself, if you really is a clever as you want us to feel you are. Much of what i write can hardly become a supprise to anyone.
It's a tough market for developers, and when it's a tough market for them it's a tough market for anyone. YOU ARE NOT ALONE!

Still you get my greetings Hutch, cause somewere there has to be some common sense inside you .-)

What speed could I expect on the new 5200, the new "All in One" Power Mac? It seems as if this new computer is a bit slower than the 6100, isn't it? So could we probably get the speed of a TT?

Could some people perhaps install the demo on their Mac and run Gembench once, so that we could get an impression of the speed on different machines, Power Mac as well as 68k.

mvh,
christian

(Who gets more and more confused in which computer he should invest...
- A PC, because erverybody has one; A 040 Mac, because it's almost the fastest and cheapest ATARI you could get; A Mac 630 DOS, best of three worlds?!; or a Power Mac 5200, or a Falcon expansion? ...)

Source record: 163743

Hi!

AFAIK is the following part a common used paragraph in lots of SW/PD/Freeware products. Therefore did I include it also in my program archive because I would like to know _who_ gains money with my work.

* Freeware **********

This program is Freeware! This means you can copy and use this program freely. A distribution with bbs, ftp-server and PD-Series is welcome. A distribution on CD-ROMS or cover-disks requires my permission. The program must be copied completely and must not be changed!

****

But now a german cd-rom producer put mine and some other programs, which also use this paragraph, on a cd-rom without asking anybody!

Has this paragraph _any_ value or is it just rubbish and can be ignored? What do these producers think they are? Sending an email is not too difficult, isn't it?

Does anybody have a definition of PD/SW/FW?

Hi!

Yesterday I downloaded the new version of Alexander Clauss HTML reader from ftp.uni-kl.de. While playing with that program a little question came up.

Lots of people have no access to the WWW, but the information stored are (sometimes ;-) very interesting.

I could save the text pages with Netscape, but how could I save the pictures?

Wouldn't it be nice to put the some interesting places into an packed archive on a ftp-server or local bbs so that everybody can download it and install them on the local harddisk? (And on this way gets a smell of what the WWW is like? And on this way perhaps some other people could help to extend the information.)

Source record: 163745

B > I'm seriously considering buying myself a copy of Emajic's
B > Logic. Does anyone know if this will work with Geneva and
B > Neodesk? If not, will it work with any known multi tasking
B > system for the STe?

As an owner of all three programs, I must regretfully report
that Logic will NOT operate under Geneva (well, at least the current
version of Geneva - the update may bring a new level of
compatability with other programs). In fact, when I run Logic I've
set up a special system configuration that bypasses Geneva and just
installs Neodesk4 as my desktop.

I have heard that Logic will run under MagiC!, though.....

B > If Logic is run by itself...can you also run a patch editor
B > such as Xor or sound surfer along side it?

Sound Surfer (a librarian program only) is designed so that it
can run alongside Logic utilizing E-Magic's propriety operating
system and can use the LOG3 and Unitor ports- the same goes for
Sound Diver, their more elaborate editor/librarian.

As for X-OR - here's one person's solution (albeit not the
perfect solution:

Secrets! Secrets! Secrets! Secrets!

<<<<<<< Softlinkers, Logicians and Notarians:
How to get XoR and Logic Working
Together in Softlink
(What the manuals don't tell you)>>>>>>>>>>>

by Rich Thurow
Dec, 26, 1993

I've found a way to get Logic to work with XoR in softlink. Its
memory intensive, but it works given you have a 4 meg machine, a
boot manager like Superboot (unless you like running your ST dry all
the time), and a free meg of hard disk space.

It also helps if your machine runs at 16mHz, like with Adspeed, but
it is not required.

------------Gereral Instructions------------

1. Make a separate folder called SOFTLINK.2

2. Copy all of the necessary Notator SL files and softlink files to it except the Autoload song, fonts and printers. You will not be needing them. (You keep all that stuff in the old folder so you can run SL at full tilt with XoR as you are used to.)

3. Run Linkedit.prg. Check "creator stays active" for partition 2 but not for partition 3. This is very important.
a) Limit Notator SL (partition 1) to 950 kb.
b) Limit XoR (partition 2) to 910 kb.
c) Limit Logic (partition 3) to whatever is left. (I have 2009kb left. Note: Logic wants a full 2 meg free to work efficiently. Always run XoR and Logic from these prescribed partitions.

4. With your boot manager enable the booter to load BUTTNFX.ACC. If you have ADspeed, have the boot manager enable 8MHZ.PRG. Note: Notator will load consistently only at 8MHZ. Once loaded, however, you can switch to 16 mHz in the other partitions manually and enjoy the great speedup adspeed has to offer as long as you don't mess with Notator. Avoid using Adspeed.Prg or Adspeed.Acc. These take up too much memory and require a .cnf file which could lead to problems. The little programs (8MHZ.PRG and 16MHZ.PRG) work fine by themselves and don't use any memory.

Disable all other auto programs and accessories. You need every drop of RAM if you want enough room to do things. Set the boot manager to load LINKEDIT.PRG.

5. Create a desktop file that opens windows for XoR and Logic. Disable the blitter. Save the desktop. Move it to where your booter loads .INF files. Rename it SOFTLINK.INF. If you have Adspeed, open a window on the desktop that shows the icon for 16MHZ.PRG.

---------Configuring SL--------------------

1. Give the computer a cold hard boot.
2. When the computer reaches linkedit.prg, verify all the memory is there. Click run softlink.
3. Configure a new AUTOLOAD.SON
a) After Notator SL loads you will see it only has 4,708 events. Hit shift then Q to disable notation and you will be back to 44,542. We are only using SL as a midi buffer for XoR, so this is enough to do the job.
b) Go to the menu and click on new song.
c) Optional: Go to load system and load in channel names only from you last autoload.son file. You dont need anything else.
d) Go to the softlink menu in SL and disable everything, including "sysex thru of phys midi data".
e) Go to the midi thru menu and make sure midi thru is ON and there
is no auto-off channel set. Set the Thru channel to A1.
f) Save the song as your autoload.son in the softlink.2 folder.

---------- To Operate:------------------

1. Coldboot
2. After the boot manger loads BUTTNFX and 8MHZ (if adspeed is present), and calls up Linkedit, run softlink. Disable Notation in SL. Go to partition 2. Your desktop should pop up with windows for Xor, Logic, and 16mhZ.PRG. Run 16MHZ. Run XoR. Go to Partition 3 and run Logic.

Done!

--------------Features and Caveats:----------

Under this configuration Logic and Xor will run at 16mhz. Logic will
give you about 83,000 free events and Xor will be big enough to have a large library and a large sysex bank open at once with some overhead. (I have 183,420 bytes free with 13 profiles loaded.)

Logic and Xor will not communicate directly with each other, but will communicate quickly with your synths. Xor uses Notator SL as its access to LOG3 and Unitor. The result is that there is no need for any port switching or fiddling with your midi switchers. After you send new sounds over from Xor, just go to logic
and change the names of the sounds in the instrument flip menu. The important thing is that now your synths can access your Xor Libraries
without quiting Logic.

Warning: Do Not try to do anything in Notator SL. It does not work right at 16mhz and Notator's clock conflicts with Logic's clock. Consider Notator SL like an invisible desk accessory. You know its there working but you can't do anything with it.

You also will not be able to record in Logic the edits you are making
in XoR "on the fly" as you could do with Notator SL. Logic will ignore the sysex happenings in XoR. You might be able to get it working with experimenting with the softlink thru in SL. My intention here is just to show you how I got Logic and XoR working solidly together. Now that we're on solid ground, we can experiment. You should tweak the memory settings to your system.

While I can't guarantee it will work for you, and can't be responsible if you mess something up, if you follow all these instructions you should have success.

Happy holidays!

Rich Thurow

Now if anyone here has a better solution, then I'm all ears.....

Some of them worked... They also sold Atari stuff at a local
show in Dortmund. An ST for 10 marks, a laser printer for 40 marks,
a 17" monitor for 50 marks. They said the things were "untested" but
might work.
They were not untested, they couln't even work since the were no
CPUs, no keyboard processors, no floppy controllers anymore...

I know from a local Atari seller that he drives to Holland every
week, buys a bunch of things, goes home, looks in the machines,
tries to repair them and if they work, he sells them. Mostly he
goes back to ACN and gives them back. But they only do that if
you're a registered seller.
I would stay away from this company.

>
Hello Johan!
Please excuse my english, but I will try to answer your question:

Just today I got a mail from DMC in Walluf (Germany). I had do read
this Mail for two or three times, before I understood, what the
difference between SL an MM (for Magic Mac) is:
1) MM runs ONLY on MagicMac!! :-((((I don't know why....
2) MM work's with long filenames
3) MM has Bridge 2.0, PhotoCD-Import, resolution up to 1200dpi
4) Update SL 11/95 ->> MM costs 248 DM

5) SL 11/94 ->> Sl 6/95 costs 'only' 128 DM
6) SL 6/95 and MM have: PICT-Import
Im- and Export of Photoshop Documents
Coloured Helplines
7) If you 'only' should order the normal SL-Update, you can get
the Bridge-module and photocdimport for a 'special-price' (248DM)

Hope, I could help you.... Joachim

>I've got an 1040 STe with the builtin 720kb disk, no harddisk, no extra
floppy.
How much memory? If you have enough memory you could copy the *.zoo file to a
ram disk, and decompress it to your floppy.
>BTW, is it possible to decompress
files on for example a PC, and use them on>my Atari? I tried to de'zoo the
file on a PC emulator on a HP workstation,>it looked okay, it was the right
size, but when I tried to run it on my STe>it started loading and then got
back to the desktop without anyting else>happening.
why use a PC emulator. there must be a unix zoo machine out there somewhere,
non? try ftp'ing to: sunsite.unc.edu/pub/Linux/utils/compress/zoo210a.taz

David Stuart (dstuart@gpu3.srv.ualberta.ca) wrote:
: I can't run minit.ttp from the desktop- so I got ahold of a bash shell.
: The bash shell didn't come with any of the standard utilites (ie: ls, mv,
: cp, cat, more), so I had to get those (just where the heck are cat and
: more, anyhoo?), after finding a few utilites, then I could actually move
: around in my shell, and execute minit.ttp. Seeing as how I didn't want to
: wipe my entire hard-drive, I typed "minit.ttp -V -n 2 A:", and that
: promptly initialized the disk I had set up. I think. Problem is, the disk
: is still limited to 8.3 filenames. The docs are, umm, well... not that
: helpful. What am I doing wrong?

Well, I found MinixFS easy to set up. For a start, you can run Minit from
the desktop. Just run it, from the desktop or the shell, and pass the
parameters that you mention. When I did my Hard Drive partition, I also
passed -P, so as the protect it from being written to if I did not have
Minixfs running, thus mucking up the whole partition. Then, you reboot,
so that Minixfs can take another look at what devices are Minix and which
are not, this way your new partition will be recognised. Remember that
only applications running in the MiNT Domain will make use of the long
filenames, so this rules out the atari desktop. As for the floppy discs,
I can't remember if I had to reboot to use them or not.

You should find that after doing all that, all will work fine.
BTW, you should regularaly run fsck, as the filesystem can easily be
damaged if the system crashes. If you have the computer hang, run fsck
immediatly after you reboot. I would also advise getting MFSDefrag.

I am using MinixFS 0.60 pl10, so if you have a older version it might be
a different procedure.

Source record: 163844

I have just got a new Atari Falcon, 4MB and no HD.

I heard that there is a number of overscan packages (software only
and harware/software) to increase resolution on the Falcon (e.g BlowUp
etc.).What I would like to know is:

1) Is there any package that can be used to increase resolution on an
Atari SM124 mono monitor (I've also got a colour SVGA monitor but
I *really* like my little SM124 and have grown quite attached to it!)
I would prefer a software only solution.

2) What kind of resolutions would be possible?

Cheers,

Rudi

4679. Trouble with ICD AdSCSI plus HOst Adaptor

Newsgroup: comp.sys.atari.st
Date: 1995-06-15 00:00:00 UTC
From: jat5@york.ac.uk
Message-ID: <3rp1lt$h9j@mailer.york.ac.uk>
Source record: 163653
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Ok.
I have a 210Meg hard drive hanging off of an ICD AdSCSI plus host
adaptor. When I connect this to an STe, it works perfectly. However, when
I connect it to an STFM or MEGA ST, the monitor display goes completely
haywire. The problem remains even if I disconnect the hard drive from the
host adaptor.

I think that it's either:

a) a problem with the host adaptor, or
b) a problem with the ST (FM or MEGA) DMA output port.

I shouldn't think that it's a) because it works with the STe.

Has anyone had any similar experiences?

I'd be extremely grateful for any replies.

: I've just received a 210 Meg Hard disk for my Atari ST (520
: STFM upgraded to 1Meg). It uses an ICD Host adaptor, and the software
: allows *big* partitions (known as BGM partitions).

: My problem: The guy I bought it off used it with an STe, and
: partitioned the drive with >16Meg GEM partitions. My STFM doesn't like
: this!

: My question is: Is it possible to re-partition the drive (using the
: ICDFMT program) using the same partition sizes (but with BGM partitions
: rather than GEM) WITHOUT LOSING THE DATA ON THE DRIVE

Nope, sorry, you can't. Your best bet is to back the sucker up with your
friend's STe and use your STFM to repartition it. You see, the partition
for TOS 1.4+ still uses 512 byte sectors and 2 sector file allocation
units (if it is less than 32 megs).

: **********

: (I have access to an STe - thats how I know about the partitioning)

: I suppose the alternative would be to get TOS1.4....

Good idea, better yet, get TOS 2.06.

Rich

First of all, I do not necessarily want NEW software, but I would love to
see upgraded and updated software. That's the case even on Macs and PCs;
much more people are interested in updtaes from Photoshop, MS products
etc.. than new software (which might beunstable). Or how many new WPs or
DTP packages has the Mac seen?

Right now there are some upgraeds in the line:
Arabesque 2, That's Write 4.10, LDW-Powercalc 3, Speedo GDOS 5.1
(all No!/Compo Software)
Papyrus 4.0, Tempus Word 3.0 (ROM, CCD)
Charly Image 4.0 (although I have doubts about this one)
NEW packages are:
Texel, a new spreadsheet due in summer;

already appeeared has
Twist 3,
Phoenix 4.0

in the shareware market we expect the release of three X-Control clones.
And MagicMac for PPc hit the streets wome days ago, as did Calamus SL 95.
So there is stil activity going on. IMO we will see most of the new
stuff at the autumn ProTOS show in Hennef.

Regards,

Alfred

I would recommend the Falcon is the Atari-machine you seek. The TT is also
a cool machine, but the Falcon is more fun and runs (in many terms) the same
software with similar advantages over an old ST/STE.

Keep Cool and Flying...

>

>I'm in the US.
>
>The only Atari BBSs I've seen in the past few years have been Express (I
>used to run Express until my ST died and it Express wouldn't run on the
>Falcon) and ///Turbo. I don't even know if there's anymore local Atari
>BBSs to me. They're all switched to IBM.
>

QBBS is available and still being developed it runs on ST's and Falcon.

It should be available from BBS's in the USA but if you are unable to find it let me know and I will post the number of Glen Kelly's BBS in Lake Charles as he runs QBBS on his Falcon.
[sorry dont have the number here].

If you want more info then mail me at mas@cbbs.conqueror.co.uk or here.

4687. ANSI EDITOR FOR FALCON(VGA)

Newsgroup: comp.sys.atari.st
Date: 1995-06-15 00:00:00 UTC
From: Basis Plus <basis>
Message-ID: <3rp0sk$77e@neptune.ethz.ch>
Source record: 163661

Hello all...

I've written a little ANSI editor for the Falcon. As much I know there is no other program like this for the bird... It is able to read and write normal ANSI files as they are often used in BBSs. Now I would like if there are other people interested in this piece of code. If so, please mail me directly. Perhaps
I will release a public (freeware) version of it. (This includes an ANSI-driver u can use for your own programs. And it`s really FAST!)

Greetz,

Teddy of TMC

Hi Rob,

It could be that the disk you have is an '8-bit disk'. I've never heard
of a 9-bit byte formatted disk (1 byte==8 bits, no more, no less). It
could be that it was formatted on an 8-bit machine (eg, Atari
130XE/800XL, Commodore 64 etc). The only way I know of retrieving the
data on the disk is to try it in these machines to see if you can access it.

Best of luck, hope this helps!

MagicMac does run on a 040. I own a Performa 475 (LC68040 processor)
and MagicMac is very stable on it. (As well as being about 4 times
faster than my Falcon [sob]).

>and how well it works with NeoDesk.

Whether Geneva is better than Magic, or vice versa, depends on what
you want. Geneva uses cooperative multitasking (like windoze)
whereas MagiC is pre-emptive (like MultiTos). If you are happy with
a task switching system stick with Geneva as it is perfectly adequate
and very compatible with exisitng software, although some MiNT like
support would be nice for running stuff like MiNT net.

If you want a fast version of MultiTOS.. Go for MagiC.

Neodesk 4 does seem perfectly happy to run with Geneva, MagiC or
MultiTOS for that matter.

>And on this way perhaps some other people could help to extend the
>information.)

You can get the pictures also. Here's what you have to do.

1). Load the page you want into your Web browser (most people use Netscape now).

2). Save the source.

3). Any pictures within the source will be listed with <img src "name of
picture">

4). Enter the full URL of the picture which will load in just the picture. Then
choose to Save As on Netscape or if it loads into an external viewer using
a different browser try and save it using that.

For most pages this will get the pictures out one by one for you. Hope this
helps.

Message-ID: <803201846snz@mbha.demon.co.uk>
Source record: 163666

Regrettably I have had no luck from my appeal for a PGS driver for
the HP Colour Laserjet <sigh>.

HP themselves will not give out detail about their Postscript card <sigh>
on the basis of commercial secrets...

Anyone got a printer driver for the big HP inkjet printers, these or
anything else that uses or emulates PCL5 should be worth a try. DJ550C
doesn't work though.

I am really glad Atari's policies have made the TT a deadend technology. I
am really glad I bought Pagestream as well _NOT_.

Playstation looks nicer, both from a 'well-designed' (ie lift the lid and look
inside and you'll that while the Saturn looks like it was put together from
part bins, the Playstation looks like the (extremely competent) engineers at
Sony designed it from the ground up) and from a programmer's point of view.

Precisely - people out there are just starting to get to grips with what can
be done under GEM/MiNT, ten years on from the system's genesis. How many Unix
gurus are there out there. Far more than the number of Windoze gurus, I'd bet,
even given the *vastly* greater installed user base of Windoze. Systems need
to be mature before people fully get to grips with them.

4695. Gemulator and MIDI

Newsgroup: comp.sys.atari.st
Date: 1995-06-15 00:00:00 UTC
From: gustavo@dent.uchicago.edu
Message-ID: <DA862x.E70@midway.uchicago.edu>
Source record: 163669

Hi,
I'm thinking of retiring my Mega 4, and assessing my options to replace it. A 386- or 486-based machine with Gemulator is a strong contender; however, I would be primarily interested in being able to run my Atari MIDI software (sequencers, patch editors, etc). The question is: is what I have in mind possible? What hardware do I need? If there is anyone out there running that kind of MIDI setup, I'd appreciate comments, tips, etc. Thanks in advance.

Gustavo

6 Foot might be pushing it - the best thing would be to put your external disk as near to the machine as possible (1 -1.5 feet) and reduce any other cable lengths as much as possible.

> 2. How do I check for SCSI terminations? I have heard of people
> terminationg the internal SCSI chain as well as the external chain.

Err - internal chain and external chain should be the same bus - unless you are running two buses!

4703. Useful life of floppy disks

Newsgroup: comp.sys.atari.st
Date: 1995-06-15 00:00:00 UTC
From: ai063@FreeNet.Carleton.CA
Message-ID: <DA8AC4.Gqt@freenet.carleton.ca>
Source record: 163677

I'm looking for info' about the durability and longevity of floppy disks. I have backed up all my commercial software on to floppies, some of which are 6 to 8 years old--the floppies that is. I have backed up my HD partitions to floppies of mixed vintage.

BTW, my floppies are mostly DSDD formatted to 80x10. I have also used DSHD disks, preformatted to IBM standards, and reformatted down to 80x10. I've had some problems with these; sometimes my external floppy
drive, SF314, won't read these latter kind after reformatting. The internal drive handles them OK.

I would like to know what the life expectancy of run-of-the-mill floppies is. Should I be considering copying my commercial software and HD backups to newer disks and discarding the older ones?
Does the magnetic material deteriorate over time (how much time?) or is amount of use a more important factor? Many of the backup floppies were new when used; others had seen a fair bit of use before being given the backup role.

Any info' would be appreciated.

Hi,

I am trying to get hold of the latest versions of SEMPER, LED and JETMAIL, or other software I need to set myself up as a point off my local BBS.

I have tried the few (old !) BBS numbers I have for the ST in the UK, but they either have very old versions, or won't let me download them.

I've tried Desktop, Fortress & Folkestone and only managed to get a rather old version of LED with German docs !

Anyone know where I can get them ? ....and a list of good UK ST BBS numbers please ?

Many thanks in advance,

Kev.

4707. GCC 2.33/2.58 problem

Newsgroup: comp.sys.atari.st
Date: 1995-06-15 00:00:00 UTC
From: ppospis@mtroyal.ab.ca
Message-ID: <1995Jun15.163044.4968@mtroyal.ab.ca>
Source record: 163681
Cross-posted to: comp.sys.atari.programmer,comp.sys.atari.st

I have grabbed gcc binaries for both 2.33 and 2.58. I am using a
1040ST, 4Mb and gulam. I think that all the appropriate environment
variables are all set, i.e.

```
setenv GCCEXEC = i:\gcc\bin\gcc-
setenv GCCINC = i:\gcc\cinclude
setenv GCCLIB = i:\gcc\lib
setenv GXXINC = i:\gcc\include
```

plus all of the aliases and environment variables for each ttp. And
the gcc/bin directory is on my PATH. Each of the directories from the
environment variables contain the appropriate files.

The typical Hello world program in C compiles perfect. However, the
same program in C++ will not. For both version the following is
generated:

```
In file included from i:\gcc\include\g_congif.h:16
from i:\gcc\include\streambu.h:25
from i:\gcc\include\iostream.h:24
from t.cc:1:
i:\gcc\cinclude\stdio.h:155: warning: `_NFILE' redefined
i:\gcc\include\compiler.h:212: warning: this is the location of the previous
definition

m:/cc1000001.o: Undefined symbol _cout referenced from text
m:/cc1000001.o: Undefined symbol ostream::operator<<(const char *) referenced
from text
```

Does anybody have any idea what the first chunk means?

The two warnings while annoying I can live with.
However, why do they occur?

The two undefined symbol errors would seem to indicate that the linker
is not finding the g++.olb, but it is in the lib directory. I have tried
adding a GXXLIB environment variable with the same result. Does gcc
2.xx expect different environment variables for g++?

I am using the g++ libraries and includes version 20 and gcc libraries
and includes version 98.

Any ideas or suggestions on how to fix these would be greatly
appreciated. Thanks

Paul Pospisil

Enough people have asked that I've assembled some instructions for modifying a Microsoft Mouse (Bus Version Only!) to work with an Atari ST/STE/TT/Falcon. I have only tested this with the Microsoft Mouse II, but it should work with any mouse/trakball designed for a bus interface card on a PC. Included are general instructions for modifying the PC Bus mouse itself and for building an interface box which will allow any PC Bus mouse/trakball to be connected to an Atari ST/STE/TT/Falcon without further modification. Any particulars mentioned herein can easily be modified to fit whatever situation you may find yourself in - at least with respect to making a PC Bus mouse work on your Atari.

First, a NOTE: I am not in any way, shape or form responsible for any harm that may come to you, your computer, your mouse or other controller device, or anything whatsoever, through your use of the information contained in this file. While I believe all of the information to be accurate, I make no guarantees as to its accuracy and have no guarantee that you will perform everything in a safe manner or according the instructions provided. So you're on you're own here; however, it did work for me.

STUFF YOU MIGHT NEED FOR THIS PROJECT:

(items with "+" are for building the box)
(and may not be needed if you plan to)
(modify the bus device directly)

- Bus Mouse/Trakball + Electronics Project Box

+ Coffee, tea, soda, milk, water, beer, hard liquor,
Everclear or whatever liquid refreshment/stimulant
you feel necessary to continue

- Atari Mouse Cord (recommended) -OR- joystick cord with all 9
wires -OR- nine-wire conductor and DB-9 connector

- Solder & Soldering Iron + Hot Glue Gun & glue sticks

- Ohmmeter/Multimeter + Drill

- No. 1 Philips and Slot screwdrivers

+ Aspirin or Non-aspirin pain reliever (just in case)

ON WITH THE SHOW

Here are the pin and signal assignments for the PC Bus mouse and
Atari mouse connectors:

```
Bus Mouse Signal Atari Mouse
--------- ------ -----------
1 Ground 8
2 Rt Btn 9 (Right Button)
3 -- -
4 -- -
5 LftBtn 6 (Left Button)
6 YA 3 (Vertical Cursor)
7 YB 4
8 XA 1 (Horizontal Cursor)
9 XB 2
10 +5v DC 7
```

Note that, as it pertains to this modification, pin 5 is not used on
the Atari connector, pin 3 does not exist on the Bus connector, and
pin 4 on the Bus connector is not used.

Looking in from the business end of the connectors (i.e., the part
that normally plugs into the computer), the pins are labeled as
follows for the purposes of this mod (this may or may not match any
standard numbering conventions):

```
Bus Mouse Atari Mouse
--------- -----------

/-----\
--------- -------------
/ 4 2 1 \ \ 5 4 3 2 1 /
| 8 7 6 5 | \ 9 8 7 6 /
\ 10 9 / ---------
---------
```

Note the blank area at the top of the "Bus Mouse" figure. This is a
"key" of sorts to prevent improper insertion of the plug, and is a
handy way to differentiate between a Bus plug and a PS/2 plug, both of
which are round. Another way to tell the two apart is the Bus
configuration has ten places for pins, while the PS/2 configuration
has only 6 pins. YOU MUST USE A BUS MOUSE/TRAKBALL FOR THIS PROJECT
TO WORK. Serial, PS/2 and MousePort mice do not have the proper
signals to work with the Atari mouse port.

```
BEFORE GETTING STARTED:
----------------------
```

There's several ways this mod can be done, and you'll want to
prepare for each a little differently. The first step, of course, to
read over all the instructions carefully and make sure you understand
them before proceeding.

Obviously, the mouse/trakball has to plug into the Atari. The best
way to do this is to use the cord from an unused Atari mouse. The

second best way is to use a DB-9 connector, which can be attached directly to the cord of the bus mouse, or to an un-used Atari mouse cord which can then be patched to the bus mouse. Note that the mouse cord MUST HAVE ALL CONDUCTORS AVAILABLE with the exception of pin 5. Not all mice use the same number of conductors, and many have simply left the unused conductors out of the cord. You must use a cord which has the required conductors (1-4, 6-9) available for use. Joystick cables with the required conductors will also work, but are not as flexible as mouse cords; the same is true of most other cables you might make up yourself.

To simplify things later on, you might go ahead and determine which wire in the cable(s) are connected to which pins. Each wire should be a different color, which makes it easy to create a table listing each wire color and the pin it goes to. If the wires are all the same color, simply label each wire with a piece of tape and the number of the pin it connects with. You can get this information either by opening up the body of the PC Bus mouse and using an ohmmeter to trace continuity; checking things out visually, or by using a very small divining rod and immense faith in your ability to use it.

TO MODIFY THE BUS MOUSE/TRAKBALL DIRECTLY:

Using whatever 9-pin connector/cable combination you have chosen to use, simply connect the pins/wires from the Bus mouse connector to the Atari mouse connector as described in the chart at the beginning of this text.

If you will be cutting the connector off of the Bus mouse cord and replacing it with an Atari/DB-9 connector, make sure you have already generated a listing of what color wires go to what pins! Otherwise you'll be hard pressed to tell which wires go where and may never get it working right.

Once the connections have been made, check all of them and if all looks well, plug it in and give it a go. Make sure to check out all functions of the mouse (cursor up/down/left/right, left/right buttons). If it doesn't work properly, refer to TROUBLESHOOTING below for some tips. If it does work, congratualtions!

TO BUILD A BUS MOUSE/TRAKBALL INTERFACE

If you have an un-used IBM bus card handy, it can be used to construct a plug-in box which will allow the use of any other bus controller (i.e., mice, trakballs or pen mice) without having to perform further modifications to equipment. The Microsoft Bus mouse comes with an 8-bit ISA Bus card; if the PC Bus mouse you obtained did not come with a card and you do not have another, you might try obtaining just the 10-pin Bus jack from an electronics supply store or via mail order.

My box uses the card that came with the Microsoft Bus mouse. If one bends the metal bracket on the card parallel to each side of the circuit card and cuts the circuit card at the bracket ends, the resulting card will fit into most small electronics project boxes of about 2" x 2" x 3". I took the resulting card to a local Radio Shack and found a box that would fit for under $3.00.

Place the card into the box and determine where to drill two holes: A big one for the PC Bus mouse to plug into the card, and a smaller one for the mouse cord which will plug into the Atari.

Once the holes are drilled, use an ohmmeter to determine where, on the "chopped" circuit board, the pins of the jack can be accessed. This allows for easier connecting of the Atari mouse cable to the circuit card. Ideally there should be a row of un-used solder pads on the top of the circuit board, near the jack, which can be used for this purpose. Keep good notes and/or label the solder pads so you know which ones lead to which pins on the bus jack. Also keep in mind that the pin numbers on the jack are mirrored left-to-right, as compared to looking at the bus connector on the mouse itself.

Thread the end of the cable which will be leading to the Atari connector through the small hole in the project box so that the plug is outside the box and the leads are accessable within the box. Tie a knot in the cable about three inches from the ends of the leads to prevent the cord from being pulled out from the plug end.

Solder the appropriate wires of the Atari cord to the solder pads on the circuit card which match the proper pins on the Bus connector. Before connecting the box to the Atari for testing, double check all connections by using an ohmmeter, making sure the PC Bus pin-to-Atari pin assignments are correct.

Test the box by plugging the Atari connector into the computer and the Bus mouse into the jack of the circuit card, making sure to test all functions (left/right/up/down cursor; left/right click). If there's a God in Heaven and all is right with the world, everything will function properly. If it doesn't, take a look at TROUBLESHOOTING below.

Once you've verified that all works well, place the ciruit board in the project box so the mouse connector lines up with the hole drilled for it and hot-glue the circuit board in place using plenty of glue along the edges of the metal bracket. Pull the mouse cord to the Atari connector so the knot in the cable is placed against the inside of the project box, making sure the leads to the ciruit board aren't being stressed, and hot glue that in place as well. Before securing the lid to the box, make sure that the PC Bus mouse easily plugs into the connector in the box. Then secure the lid to the box, and you're good to go!

You now have an interface that should let you plug any standard PC Bus mouse, trakball or cheese grater directly to the Atari without any

further modification. In other words, you won't have to do this again and won't have the excuse again later, so you might as well sit back and have that beer now.

TROUBLESHOOTING

Those making an interface box will likely experience the most difficulty, as it is easy to lose track of where on the circuit board one can make a good connection with a particular pin on the connector. Being careful and meticulous and using a "paper brain" will help avoid problems later on.

The first thing to do, of course, is to check all connections to make sure the correct pins are connected to each other, and check each connection to make sure it is electrically secure and complete. If this fails, try using some of the tips below, which is basically the same advice in table form: ;)

Symptom	Probable Cause	Solution
Mouse cursor movement reversed (left moves to right, up moves down, etc.)	XA/XB or YA/YB signals reversed	Reverse XA/XB signals for horizontal, YA/YB for vertical problems.
Mouse cursor movement really hosed up (left moves up, up moves right, etc.)	XA/XB and YA/YB signals connected to wrong pins	Ensure XA/XB and YA/YB signals connected to proper pins as per PC Bus/Signal/Atari Mouse table
Right or Left mouse button does not work. _or_ are reversed. This can be checked by trying each button to ensure Lft Btn and as if it were the Rt Btn signals are other button. not reversed.	Signals not connected	Check pin-to-pin connections for mouse button signals; Check by trying each button to ensure Lft Btn and Rt Btn signals are not reversed.
Any given function does not work.	Signal not properly connected.	Electrically check the connection for that signal; Check pin-to-pin connections.
All else fails.	Did not try, or did try; did not try again.	Try again.

Set forth in electronic text for all posterity this 29th day of May, 1994, for the edification of the masses and to while away a few moments that would otherwise have made up a dull day,

Michael Parrott
mparrott@sincom.com

Many thanks to everyone who's ever written anything whatsoever about modifying a bus mouse to work on an Atari computer, whether in textual or graphic format. I've tried not to draw directly from any other source for this file, but have surely been influenced by other information I've found on the subject, so thanks to those folk, whomever they may be, are definitely in order. So there.

I think you are quite close to the mark here....

A lot of my friends look at my Atari and say "Why don't you get a PC?"
When I ask why, they tell me there is more software available for PC.

A quick examination of their software collection shows that what they
should say is that there is a larger user base from which to pirate
commercial software.

There are PC owners I know who do not own original copies of ANY
software - even their DOS is copied!!!!

This is a kind of public service announcement.

If you are selling a Laser Printer and will be shipping the printer to the other party, do your buying party a favor - remove the toner cartridge and probably more importantly, the toner overflow box (at right side of printer when cover is open - Atari SLM804 assumed. Then clean out the printer of as much spilled toner as you can. Shipping can and will spread any loose toner rather completely - and since its electrically conducting, can cause disastrous shorts. After removing the toner and overflow box, they can be sealed in plastic bags (ziplock style and boxed separately.) Toner spills are a real mess that you don't want to wish on anyone.

Hiho,

MagiC is released with EASE, another desktop-replacement (I refuse to say she**, because of the north-sea-scandal of this company), but it has IMHO some restrictions - e.g. 8+3-filename-convention.
How about THING, also avaliable in english and the new v0.43 has tons of nice-to-have-and-use features - inculding even longer filenames: With MagiCMac, you have access to your whole Mac-HD! I use it for several months and it works nearly perfect (really good work, Arno!)...

Is there a way to "trick" First Word Plus (v 3.20) into printing all the odd-numbered pages * (and, once I flip the papers over <g>, all the even-numbered pages) in a multiple-page document?

* Retaining their page numbers, of course

If not, are there any other word processors for the Atari computers that have that feature?

Thanks!

- John J. Amsler

: If you can find it, I'd very much like to read that article, Tommi (as
: well as the credentials of those who did the so-called 'research').

I had to make a summary of that article for my marketing course at GSU,
so I'll probably find it tonight. By Murphy's Laws, I naturally managed
to lose the article itself - but I'll look it out from my summary.

: > What do you think? Was this research rubbish?

: Let's put it this way... what do YOU think? Without more information, I
: cannot pass judgement, but it certainly sounds suspicious. If it was a
: simple survey, then it's lost most scientific credibility right away.
: Any actual research would be difficult and expensive if done properly.

: I can see how in some very large markets piracy might actually be a boost
: to hardware sales but cannot fathom how it would help software sales. The
: myth that -most- pirates steal software only temporarily to 'test' it is,
: IMHO, just that... a myth. Why buy when it can be had for free?

Please, do _not_ think that I'm trying to defend criminality. But as
world is complex, it's IMHO always very good to understand, *WHY* people
do what they do (e.g. use pirated software), before judging them.

I can very well understand that some people want to test software before
parting with their money... Who wouldn't? All illegal program users
certainly aren't just nasty people who don't want to pay, but still want
to get the full benefits. It's too easy to see it that way, I think.

Consider this: in PC- and Mac-worlds, one very often has a chance to try
all kinds of expensive software, because PC-users are everywhere, schools
and universities use many top PC-programs, etc. But what about Atari
community? You probably don't have a software dealer very near, or in
your country at all. Your friends might not use the expensive CAD- or
DTP-program you're interested in. There might not be any DEMO existing
(!) at all (like: Tempus Word Pro, DA's Layout CD) - or the demo version
might be so old and/or limited that you really can't use it to find out,
if this program is worth spending $500..1000, for example.

I found _too_ bitterly out this, when I years ago noticed that
Calligrapher Pro Demo worked perfectly on my accelerated Mega ST - but

the commercial version did NOT! And that wasn't a cheap program..

So, honestly, we cannot blame someone who hasn't copied the manuals - but wants to test e.g. Calamus SL at home, to find out if everything works as it should. Without manuals, programs like Calamus SL are virtually useless for others but professionals. They really work like demos, then. And I really think, that one we should blame more than the uncertain consumer who tries to make up his mind, is the program's maker when there is no adequate demo version available! You might not drive a car from a car dealer without paying - but you won't pay for your car without seeing and test-driving it, either - do you?

One problem is also this: we normally don't put a 12-year who has done some silly, damaging practical joke, to prison. I feel that many people don't try to benefit from their illegal software at all. They just play with them like kids; they enjoy collecting things, and showing them to their friends. It is illegal, certainly - but fortunately it doesn't often hurt anyone. Sometimes programs like those are the only reason those people still use e.h. Atari computers. If you can prevent them from playing with collected software, they'll just change their camp, and start collecting PC- or Mac-software. It's childish, maybe - but hardly more, I think.

This is a good moment to give my thanks to R.O.M software; Papyrus Demos are excellent work, and have certainly attracted many people (including me) to become registered Papyrus users. More software firms like R.O.M - and world gets better =-) !

I understand your feelings as a program developer, Hutch - and I respect your right to be angry, when people take advantage of you without paying. But in order to stop piracy, we just can't tell people: "stop acting criminal!", when the reasons behind piracy still exist. Do you agree?

: -Hutch- @ Fair Dinkum Tech

Greetings,
Tommi

Linux is only for 68030 nachines with FPU chips. Minix is actually a
seperate OS in its own right. However a patch has been written for MiNT
(called MINIXFS) which allows it to use read/write/format Minix type disks.
Its not possible though to run full Minix OS *and* MiNT at the same time.

> I can't run minit.ttp from the desktop- so I got ahold of a bash shell.

It should run from the desktop. Just make sure you have Mint loaded - and
give minit a correct command line.

> how I didn't want to wipe my entire hard-drive, I typed "minit.ttp
> -V -n 2 A:", and that promptly initialized the disk I had set up.
> I think. Problem is, the disk is still limited to 8.3 filenames. The
> docs are, umm, well... not that helpful. What am I doing wrong?

This was the right thing to do - and it *should* have worked. It may well
not be MINIXFS at fault. Some older utilities don't know about MINIXFS -
so they convert to 8.3 names anyway. The 'acid' test though is to write
some files to the MINIXFS format disk you have made; wait a few moments
to allow the cache to clear - and reboot under normal TOS. If you still
can read the disk - then the MINIXFS isn't working. This test works even
if your tools are broken as described above.

> Also, I can't seem to get onto any other drives other than the one

What sort of errors are you getting here?

:-)

> I have no idea how to check for SCSI chain terminations, so I don't
> know if everything is set up right.

I've not checked my internel TT drive - but externally I've removed termination from all devices except the end one. Termination is either set by a jumper - or often SIL resistor packs. If they are soldered in place - then its probably best to leave them there.

The other thing to check is TERMPWR. I have a SCSI terminator with LEDs so this is easy for me. Otherwise check for around 5V between pins:

1 and 26. (these are what my notes say anyway - a 2nd opinion is probably advisable).

Without TERMPWR then your termination is unlikely to work even if it is in the right place.

> 1. Is the cable lenght too long? The idea was to eventually move

Not really - though if you are using flat ribbon cable - then it can be very fussy. I've shortened all my ribbon cable lengths and replaced some of it with decent molded SCSI cables.

> 2. How do I check for SCSI terminations? I have heard of people
> terminationg the internal SCSI chain as well as the external chain.

The internal and external chains are the same. The device at eash end should be terminated - and one end is often the host adaptor. I'm not sure where the host adpator on the TT sits on the SCSI bus - but there should be a terminator in there somewhere.

SCSI is a bit of a black art - and you can break the rules with good effect most of the time. I've become slightly paranoid as I've managed to loss a fair bit of data and blow 2 drives due to either poor termination - or my attempts to fix it! ;-(

> Someone was saying that they were having SCSI timeout errors (danger

> SCSI problems before this new kernel (with 9.4, 5, nor 6).

I think it must be the kernel. I've never had a problem with 0.9.5 - and haven't upgraded yet to 0.9.6 or 7.

:-)

4719. Stock Market Simulation...

Newsgroup: comp.sys.atari.st
Date: 1995-06-15 00:00:00 UTC
From: del7562@ucs.usl.edu
Message-ID: <3ro4dt$njm@rouge.usl.edu>
Source record: 163693

Back in '87 or so I had a game for my 520 ST which was a pretty fun, but unrealistically unbalanceable stock market simulation. I am certain it was share/freeware, but have been unable to locate it on any of the FTP sites. Having reacquired an ST (1040), I'd like to play a few of the old fav's. Can anybody point me at it since I can't find it, please?

-Randy

: MOD files. I only seem to find the players !!!

AMINet has thousands (literally) of MODs. Their main site is at
ftp.wustl.edu in the US; directory is /pub/aminet/mods
There is also a UK mirror at src.doc.ic.ac.uk ... I think the directory
is the same, but it might also be in /packages/aminet/mods as well.
There's even a few of my MODs there, too. :-)

Their are plenty new drivers for the Cannon, like BJ10E,BJ130E,BL330 and BJC800..

These are the latest that were posted to GEnie some years back...

1st Word Plus only uses the printers built in fonts and its very easy to write you own....

Will only support partitions less than 14.2 megs and bigger that 4.2 megs,
and has lots of problems with some HD formaters...

Also only support for drive device 0 and will only HD boot if you are using
PC DOS....

So many many IF and BUT's with it.....

Nope, cause you'll change the FAT structure, and because of this it would
be impossible to read something from your partitions, WITHOUT making
an lowlevel format first. When doing a lowlevel format, all data will
be removed..

>
>(I have access to an STe - thats how I know about the partitioning)

Do a backup then.

>

Look at it this way:

Some people might stay at a market because of piracy. Of ocuse it wouldn't
benefit anything for the software they stole, but they'll still on the market
and perhaps even buy a few programs, which will be alot better than if they
were gone.
It would however become a big problem if all people did like that, and
therefore i can not recommend it to anyone.

Not only will you not be able to repartition it without losing any files, you have to do a new format and then partition it your own way. Maybe you can ask him to copy the files onto floppy and then you won't lose the files.

Can't be done, just get TOS 1.4 and all will be OK..

ATARI do not recomend using any thing less than TOS 1.4 when using a HARD
DRIVE...

Why did he format it with such very small partitions...???

You must get glass on the crashed pod and use it for deflected the laser beams.
When you are behind the laser beams, type 'use glass'.

>given the backup role.
>

I remember a number of years ago there was a study done. If I recall,
the magnetic material on a floppy disk should last about a century,
and that's with an update once per minute. I don't think the mangentic
property of the disk will start to deteriorate on its own, but I imagine
it may also have to do with the quality of the disks.

I'd be more worried about the physical deterioration over time - the
inserting and removing of the disk, the padded material the floppy part
turns on. Saving it to hard disk (and then backing up to tape drive)
is going to be your safest bet.

4734. Megafile 44 won't initialise! HELP!

Newsgroup: comp.sys.atari.st
Date: 1995-06-16 00:00:00 UTC
From: arch@netspace.net.au
Message-ID: <arch-1606951415330001@dialup-a17.netspace.net.au>
Source record: 163609

Hi all.

It's hard to get a straight answer to a straight question here in Melbourne, so I thought I'd put it to you people...

I have an Atari Megafile 44 which refuses to initialise. It all seems to go okay upon inserting the cart, but the green light will not light up. After making some initialising type sounds, the mechanism stops spinning and I have to remove the cartridge.

Does this sound like the end for this unit, or is it a common problem that can be fixed pretty easily/cheaply?

I've had this drive for about 18 months and have used it a lot, so I suppose it may just be clapped out.

FWIW, the original power supply had to be replaced about a year ago and since the correct part was not available, the repair guy installed a Mega ST PS and said it would be alright, which it was, until now...

Hope someone can help!

cheers.

arch.

NEVER EVER USE HD disks on a Standard 720k disk drive, they will Fail...

Some STE's are fitted with 1.4 meg drives but are not used as such, you can use HD disks on these STE's..

Only buy the best type of disks, (TDK, Maxwell etc) and format them 3 Times at 10 sectors 80 tracks, unless you are doing direct copies, but please format them a few times befor use....

Their is a Reformat program that can be used to reformat disks with out using the data, this could be used from time to time...

Store all disks away from heat/dust/light etc...

Do NOT under any circumstance trust the Test archive in lharc 3.10!
I trusted it until it reported that a file which was obviously truncated
(the test indicator stopped at 60%) was fine. A bit later it reported that
another file (where the indicator did, in fact reach 100%) was OK, too.
On extract the file reported a CRC error, and in fact the last 75% of the file
was trash.

So watch out! If you want to be sure your LZH file is OK, you have to extract
it, at least with 3.10 version.

If I remember correctly, HD (High Density) disks use a different medium from DD (Double Density) disks and are therefore incompatible with them at the hardware level. The difference is that HD disks require a greater write current in the drive head to record the information; the current normally used to record on DD disks won't always work with HD disks.

HD drives have a sensor to detect the extra hole in the corner of HD disks and increase the write strength accordingly, so HD drives can read and write DD disks fine, but DD drives cannot generate the current required for HD disks.

If you reformat HD disks to DD, be prepared for them to be unreliable. Use them only for temporary files that you can afford to loose!

I recently saw a post that indicatde that ICD has a driver for the Iomega Zip drive posted on Compuserve. As I don't have access, I'd love to know if it's available anywhere else.

Failing that, perhaps some kind soul could zip, uuencode and e-mail the driver to me or maybe even post it here. I am a legitimate owner of the ICD utilities that I bought at Ace '95 in Toronto from Toad Computers, along with Link 2. Thanks.

I have read in an article a couple of years ago, that the manufacturers are
counting on a life time of about 40 hours of use for a disk.
40 hours may not seem much, but think of how long You really access the disk -
often it's only seconds at a time, so I guess that 40 hours can be equal to
many years in some cases.....

Tommi,

HDDRIVER is a commercial package and therefore sending it via email
to anyone is not permitted. Please contact your distributor from where you
obtained your copy.

In the USA you can contact Lexicor Software (us) at (617) 437 0414
or email service@lexicor.com

Cheers

4748. Midi files arrive open (not downloadable)??

4750. Mega STe SCSI Controller

Newsgroup: comp.sys.atari.st
Date: 1995-06-16 00:00:00 UTC
From: Dennis McGuire <mcguired@moose.erie.net>
Message-ID: <Pine.LNX.3.91.950616212056.8840A-100000@moose.erie.net>
Source record: 163625

After many hours of diagnosis, I have confirmed that the problem
I have had accessing external hard drives on my son's Mega STe is on the
internal SCSI controller. There are only two socketed chips on this
board, two 16-pin DIP resistor packs and ten surface mount chips. Is
anyone familiar with common failures of this controller board and where
I can get replacements?

What? I've never had any such problem, and all I have is an external
720K disk drive. The disk I purchase are all 1.44M disks, which are
preformatted.

>Only buy the best type of disks, (TDK, Maxwell etc) and format them 3 Times
>at 10 sectors 80 tracks, unless you are doing direct copies, but please format
>them a few times befor use....

The best cost money, Roger. Sometimes 'less than the best' is what you
want, if you only plan on using them once or for making redundant backups
of your primary backups (if you follow this practice).

MasterBrowse (a text-file viewer, not a word processor) can do this. I
think that Papyrus can also do this, but I'm not sure. There is a demo
of Papyrus available at atari.archive.

I don't think there is a correct definition anywhere Christian.

But i have to be honest with you, why have you made such an limit ? It would
slow down process on a CDROM if everybody did that, and we'll probably not
see any CDROM's for atari in the future.

The problem was fixed with the help of Toad computers. How nice it was to call them, get Jennifer, and have her tell me immediately that they had the Mega STe keyboard circuit trace in stock.

I ordered it Monday for $25 and today have it installed and am able again to use the control key which allows me to use pine for e-mail and responding to usenet news groups.

I also got a copy of their latest Toad catelog. Almost renews my faith in Atari. I wish the Tramiels would give David a million dollars to market Atari. I bet he could make a go of it.

Thanks Dave and Jennifer. You guys are the greatest.

The thing I like most about the latest Thing is groups: An open group looks
like a window, and you can drag files and directories into it from various
drives. Then you close it and it becomes an icon on the desktop. That way you
have various set-ups (DTP, Programming, tinkering) at you fingertips without
cluttering your desktop. Very nifty.

4767. What is Atari Medusa?

Newsgroup: comp.sys.atari.st
Date: 1995-06-17 00:00:00 UTC
From: jts@krksun.krk.fi
Message-ID: <1995Jun17.161031.19463@krk.fi>
Source record: 163508

What exactly is Atari Medusa (and Eagle)? Could I please have some specs - and are these new machines? ST compatible? Still in production? Price range?

Just curious. Please reply via e-mail.

4768. Items For Sale

Newsgroup: comp.sys.atari.st
Date: 1995-06-17 00:00:00 UTC
From: Simon King <simon@kingres.demon.co.uk>
Message-ID: <111_OASIS_@kingres.demon.co.uk>
Source record: 163636
Cross-posted to: alt.forsale,comp.misc.forsale,comp.forsale.*,comp.sys.atari.st

```
For Sale
--------

I have the following items for sale

Atari 520STFM
Switchable TOS 1.02/2.06
4 Mb Simm memory
The Link(DMA-SCSI)
40mb Quantum HD
45mb removable Syquest drive
Hayes Ultra 96 (V series Ultra Smartmodem 9600)

All the above is in a Lighthouse tower case with a seperate keyboard.

I also have a Amstrad mono monitor which is wired up to run of the ST.

For obvious reasons all the items marked with a must be sold together!

Epson LQ1050 printer.

2 x 45mb removable syquest carts.

10 x 88mb removable syquest carts.

Personal Scanner 64 400 dpi hand held scanner.

Execufold automatic letter folding machine.

British Telecom Bell 50E (A loud bell for in-door use only. REN=1).

TV signal amplifier. This amplifier is wired in directly aerial in, tv out.
Requires mains supply.

2 x Micom M414 Baseband Modem (Tricom Borer). I don't know exactly how these
modems work butI beleive that they are mean't to be permenantly connected.

Micronetwork Fax manager 3300. Lets you to use one phone line for voice / fax /
answer phone.

AccoData Large printer muffler.

Universal Mouse Trap with large sticky pad.

Interested in anything ?

Then make me a offer via E-mail (simon@kingres.demon.co.uk) please.!!
================================================
```

As I don't always take this group ! Thanks

4771. Re: TRADEprinters for ST stuff

Newsgroup: comp.sys.atari.st
Date: 1995-06-17 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <JMx+2AR.lmcclure@delphi.com>
Source record: 163639

**** UPDATE ****

The Citizen 24-pin printer has been traded. The following remain available
for sale or trade:

Printer Model	Approx. Cash Value
Panasonic 1091i	$70
Star NX-1000 Rainbow (color)	$75

Both printers are in very good condition, and include original manuals
and boxes (although the Star's box is missing the styrofoam packing blocks).

ITEMS WANTED IN TRADE:

* Single speed SCSI CD-ROM drive (for use with Atari ST)
* NVDI 3.0 or higher
* B&W hand scanner for ST (i.e., Migraph or Toad)
* Quantum LPS120S drive mechanism (or LPS105S + <$25)
* External 14.4Kbps data/fax modem
* Set of four 1meg 2-chip or 3-chip SIMMs, 100ns or faster
* Tabby graphics tablet
* Sound digitizer + cash (unless digitizer of equivalent value)

If you have something not listed that you think I might be interested
in, make the offer...the worst I can say is "No thanks".

If you have an item you want to trade but think it is worth more than
the printer you want to trade it for (i.e., a Quantum LPS240S) let me
know how much extra you would want from me.

> files.

According to the Atari Compendium (April 1994 edition) page 4.16, a 'GEM'
partition can only extend up to 16MBytes.
A 'BGM' (BigGEM) partition is from 16 MBytes upwards.
An 'XGM' is an Xtended GeM partition. This is usually done by AHDI 3.x,
and involves making two or more consecutive partitons appear as one.

The very first partition on a hard drive _MUST_ be a 'GEM' partition.

IIRC, according to Dave Small (dsmall@well.sf.ca ??) in an article in
Current Notes magazine from a few years ago, the 16Mbyte limit in a 'GEM'
partition comes from a "two character typo" in GEMDOS. (It may have been
in one of his "Heresy" articles [February/March 1992])

Hi,

Can anyone send me (or tell me where to get) a list of Atari supporting BBS numbers in the UK please ?

I am looking for software to set myself up as a point of my local BBS, but can only find very old versions, or nothing at all, from the old numbers I have.

Many thanks.

Cheers,

Kev.

: like to know _who_ gains money with my work.
: * Freeware ***
: This program is Freeware! This means you can copy and use this program
: freely. A distribution with bbs, ftp-server and PD-Series is welcome.
: A distribution on CD-ROMS or cover-disks requires my permission. The
: program must be copied completely and must not be changed!
: **
: But now a german cd-rom producer put mine and some other programs, which also
: use this paragraph, on a cd-rom without asking anybody!
: Has this paragraph _any_ value or is it just rubbish and can be ignored?
: What do these producers think they are? Sending an email is not too difficult,
: isn't it?

The producer of the CD-ROM has clearly infringed the distribution
conditions you have placed on your program, and is therefore in the
wrong. You are therefore theoretically entitled to sue for compensation,
although this may be expensive, and even to have all copies destroyed.
How much compensation you'd receive is also in doubt as they could argue
that little or no loss has been caused.

You probably don't want this, although I suggest writing to them and
requesting an apology. If they don't send you one I suggest you
specifically forbid them for distributing future versions of your
software. If they infringe this they're in serious trouble.

ATB,

Martin

> but it doesn't on level 3 (the part where the exit is). When I leave the
> elevator to the left, I see a hidden room, but I can't open it. Is that
There's actually two hidden rooms there, and neither of them open.
Perhaps you have to hit a switch somewhere first.

By the way, on level 2 there are many doors that the monsters come out
of, but which are otherwise unopenable. Has anyone gone in one of these
when a monster came out?

Another note: I discovered a bug on level 1, in the doors which you CAN
open. The spider opened it, and then I went in. I got stuck in the
door, could turn and see around and shoot anything, but they couldn't
touch me. Hmmm.

>Geneva?

I give two thumbs up to Magic..I have Geneva and Magic and find Magic the
'cleaner' of the two...The speed really helped me decide to put Geneva
on the shelf...I have had hardly any problems with compatibility and use
NeoDesk 4.02 as my desktop with no trouble. However, I would suggest waiting
for the English release of Magic 3 if you decide to switch from Geneva.

Logic works with NeoDesk but NOT Geneva. Its excellent with MagiC and
also works when MagiC has Neodesk as its shell. It is best (fastest)
with MagiC alone though. With MagiC you can multitask Logic with
other progs, namely Soundsurfer. Geneva is not Midi-friendly, but
very good for DTP.

>The very first partition on a hard drive _MUST_ be a 'GEM' partition.

100% Wrong, TOS 1.4 was fixed to support 32 meg partitions and the boot
partition can be a BGM one...

Thier is a well known saying, believe half in what you read and nothing in
what you hear....

4789. Offline Reader

Newsgroup: comp.sys.atari.st
Date: 1995-06-18 00:00:00 UTC
From: jwoakes@tdc.dircon.co.uk
Message-ID: <3s10hi$q1s@newsgate.dircon.co.uk>
Source record: 163514

Hi,

I need an offline reader for an ST that can handle packets in either HDPF
(SOUP) or ZipNews formats. I've only used QWK offline readers (IMHO).
Does anyone know of one?

Thanks.

John Woakes

Message-ID: <DADB8o.F9A@cix.compulink.co.uk>
Source record: 163515

Sorry for this off-topic message - I'll make it short.

Any Atari users in Holland - my band's first single has just been released by Sony Music in Holland. The band is called KRY. I would very much like to know if you have heard it on the radio, seen any adverts or mention of the band.

The music was produced with the help of 2*MegaSTs and Cubase.

Please respond by email

Thanks

Ofir ogal@cix.compulink.co.uk

The Megafile is based on the Syquest removable drive system - one problem
that can occur with Syquests is that that drive transmission on the cart
gets polished which means the drive cannot get up to speed which could
explain your problems. Can't off the top of my head (far too late at night
and too much beeer) reme,mber how to solve the problem

Not as far as I am aware - both SD and HD disks use the same media - the
batch is tested at HD, if it fails they downgrade it to SD.

HD drives use a smaller track which is why HD drives will invariably read
SD disks but SD drives sometimes won't read disks formatted at the SD level
on HD disks.

There are several programs for the PC, including Atario, which can read
Atari 8-bit disks.

Most require that the disks be in double density however.

See the FAQ and the atari.archive.umich.edu ftp site for more information.

>B > such as Xor or sound surfer along side it?

> Sound Surfer (a librarian program only) is designed so that it
>can run alongside Logic utilizing E-Magic's propriety operating
>system and can use the LOG3 and Unitor ports- the same goes for
>Sound Diver, their more elaborate editor/librarian.

This is wrong. Logic & Surfer/Diver are standalone programs. They will
run together (and talk to one another) but only under a Multitasking
system (ie MultiTos or MagiC).

'EMAGIC's proprietary operating system'? Where did you get this from? I
think you're confusing this with Softlink, for Notator/Creator SL (which
anyway, wasn't an OS). Logic & Diver will work under Softlink, but MagiC
is a much better bet.

> While I can't guarantee it will work for you, and can't be
> responsible if you mess something up, if you follow all these
> instructions you should have success.

This is good info Rich - do you mind if I put a copy on the EMAGIC web pages?

YES indeed, especially the new version 4 of Papyrus looks quite interesting.

It's quality is nice, and it's faster than Word in the Mac.
Papurys runs very cool on a Mac with MagicMac installed.

4800. A good AVI,QT,MOV player?

Newsgroup: comp.sys.atari.st
Date: 1995-06-18 00:00:00 UTC
From: richcsst@crash.cts.com
Message-ID: <DADCvJ.GBw@crash.cts.com>
Source record: 163525

I have Dieter Fiebelkorn's AVI and Apple Quicktime "MOV or MOOV" players and they hardly play anything. I would send this guy some dough, but only if the product worked!

Most of the animations I come across always show an error from the program. Various different messages pop up, but I have only found one animation that actually played on each of these. The Quicktime player played the openning sequence to the local 5:00 News program (posted by the station) that was created on a Mac. However, other Quicktime movies do not play, but give errors (and yet play on a Mac).

So.... Does anyone know of players that actually work? Maybe even one that uses the DSP chip?? I just wish one was available that works as well as MPEGDSP.TTP for Mpegs.

Heck, does anyone know of a conversion program to convert formats???

Any help would be appreciated.

Rich

From: eb4336@irix.bris.ac.uk
Message-ID: <DADq8M.EzC@uns.bris.ac.uk>
Source record: 163528

Having trawled the net for a program of the following description, I am turning to c.s.a.s as a last resort, so no flames please...!

I would like a program which is available on the Internet and runs on the Falcon and sends out MIDI notes in a sequence, like Sequencer One, Cubase or KCS Omega, so that I can program music in step time from it and send it to the EVS Evolution synth module I have been lent; I haven't got a keyboard but I'd still like to have some use out of the synth.

If possible, could anyone explain how to obtain such programs from the net?

Thanks very much,

Ellis Breen

The english readme:

HTML-Browser V0.93ï¿½ (May 1995) Atari ST/TT/Falcon/Medusa/Eagle/MagiC Mac
==========

At last Atarians can join the World Wide Web revolution! Using
HTML-Browser you'll be able to browse HTML files off-line. Currently
you'll have to download the HTML files separately, or read them
directly from CD-ROM, because HTML-Browser has no on-line capability
but if the browser generates enough support and feedback anything is
possible, it's up to you!

Distribution

HTML-Browser is FREEWARE. It may be copied and used freely.
Distribution by BBSs and PD libraries is allowed. However, HTML-Browser
may NOT under ANY circumstances be included in CD-ROM collections or on
magazine cover disks without my prior written permission. HTML-Browser
and its documentation must always remain together and complete with all
its files and documentation. Changes to the program and/or
documentation is forbidden.

If you like HTML-Browser and you use it regularly, please make a
donation, any currency is welcome, UK users refer to SUPPORT.TXT for
more details.

What's an HTML Browser?

Using this program you can view HTML documents from disk or CD however
this program can NOT be used to view World Wide Web (WWW) pages on-line
on the Internet.

A glance at the version number should tell you this program is still at
an early stage of development so if you would like to see this program
developed please send some feedback and register your copy locally in
the UK (refer to SUPPORT.TXT for details). No feedback means no
development, it's that simple!

My address:
Alexander Clauss

Stresemannstr. 44

Original translation: Ben Bell: bjb@bigbox.demon.co.uk

Installation

HTML-Browser can be used as either a desktop accessory or a normal GEM application. To install as a desktop accessory rename HTML.APP to HTML.ACC and place it and HTML.RSC in the root directory of your boot drive.

First you need to tell the program which (GDOS) fonts to use for each corresponding style in an HTML document. Vector fonts as provided by SpeedoGDOS or NVDI 3.x are recommended. You must specify three fonts (sans-serif, serif and monospaced) in four different styles (normal, bold, italic and bold and italic) making twelve selections altogether. For the bold and italic settings you should use a 'real' bold or italic font wherever possible. If you don't have one available you'll have to simulate these text effects using the corresponding buttons adjacent to the font selection popup. If you're using vector fonts then use the appropriate font from the font family, if available.

The supplied INF file has the following presets (for NVDI 3.x):

Headings: Swiss 721 (normal, bold, italic, bold+italic)
Normal text: Dutch 801 (normal, bold, italic, bold+italic)
Formatted: Letter Gothic 12 Pitch (normal, bold, italic, bold+italic)

If you don't like or haven't got these fonts, you'll have to select alternatives.

The size of the body text can also be altered. Don't make this too large or too small! Somewhere between 10 and 14 point is sensible (I use 12 point).

If you haven't got access to vector fonts (i.e. you don't own a copy of NVDI 3.x or SpeedoGDOS) then the point size won't change, but the text can still be viewed using the system font, usually 10 point.

If a link in an HTML document points to a file which is not in HTML format, an external viewer can be called. These programs can be called

in one of two ways and are configurable via the 'External programs...' dialog via the 'Options' menu.

The two methods are:

1) Via the VA_START message. The program must be memory resident which means installed as a desktop accessory under single TOS or as an application under a multitasking OS which must support the VA_START call. If the program is not running and the user is running under a multitasking OS, HTML-Browser tries to execute the external program itself, but this isn't possible under single TOS if HTML-Browser is running as an accessory.
2) EXEC: The program will always be executed. You'll have to use this option if the program called doesn't support the VA start protocol. Once again this cannot be used if HTML is running as a desktop accessory under single TOS.

Different file extensions can be viewed with different viewers. Remember to set the execution method to either VA_START or EXEC. The default viewer is called if there is no viewer available for the particular file extension.

When started, HTML-Browser looks for a file called home.html (HOME.HTM on TOS file systems. If you can write documents in the HTML language then you can write yourself a home page which is automatically loaded. This page could contain a list of links to other pages you may want to access frequently.

Navigating HTML Documents

Click on any underlined keyword to branch to the new page. Press the [Undo] key to step to return to the previous page. To make it easy to test the program I've included the file 'test.htm' which can be found in the 'test.doc' directory.

Display

In this dialog you can configure various display options for HTML documents.

Colours:
This section allows you to configure the display colours, for the foreground text, the background colour and link colour. If you're using less than 16 colours, the window background will always be white regardless of the settings here. In 16 colour mode, only the first nine colours should be used as the last 7 may be changed for pictures etc. In more than 16 colours, any of the first 16 can be used as they will not be changed.

Links:
Links can be displayed in underlined and/or bold text (this is important for monochrome systems who can't distinguish links by colour).

Images:
Controls image display.

'Don't show'
Prevents images being loaded and displayed which speeds up page loading.

'Monochrome'
Images are displayed in monochrome using dithering. It's the quickest method but this obviously the quality suffers.

'Greyscale'
Images are displayed as greyscales. Higher quality display at the expense of speed.

'Colour'
Not yet implemented.

'Without alt. text'
The HTML language provides for text-only systems by allowing images to be accompanied by some text which is displayed instead of the image. HTML-Browser can be made to display this text in addition to the image by deselecting this option (checkbox uncrossed). Selecting this option (checkbox crossed) supresses the alternative text if the image is displayed.
Tip for c't-CDROM users:
If this button is switched on, images will not be displayed in normal text.

Home Page

This menu item will display the standard home page, home.html.

Hotlist

The hotlist is a list of your most used HTML documents. This list enables you to get quickly to you favourite pages, without having to navigate through a long series of pages to get there. To place a page in the hotlist, select 'Document -> Hotlist'.

Selecting 'Hotlist' displays a dialog containing the page hotlist. The button "Add" adds the current page to the hotlist. Double click on an entry or select it then press 'Open' opens the selected page.
'Delete' removes the page from the hotlist, and 'Change' allows the page title to be edited and view the filename of the page it points to.

Paths...

See 'Find keyword...'

Find keyword...

This allows the user to perform a search for keywords in HTML files, and can optionally be case sensitive. The search can be conducted over

one of the following ranges of documents:

1) Current document only. The text is searched for in the current
document (the top window). If the text is found the window is
scrolled so the text is displayed at the top of the window.

2) Local HTML Documents. The text is searched for in all local HTML
documents contained in the paths specified in the 'Paths' dialog box
(and their subdirectories). The files that contain the text is made
into a list of links in an HTML file called 'result.html'.
At the moment the HTML files searched by method two are searched
purely as text, so hidden text such as comments, HTML commands,
links and so are also found. Processing the files to ignore hidden
text would be very time costly. This also means that special
characters such as accents and so on which are written into HTML
code using commands like '&auml' are not found. This shortcoming may
be addressed in a future version.
Another tip: If you're searching for something which is often used
in HTML code as a command or URL-address placing a space before it
may make it less likely to turn up in commands or URL addresses..
For example: Searching for the text 'WWW' often matches
subdirectories and addresses for pages in the form
'.../WWW/foo.html...'. Placing a space before it in the search
string, ' WWW' removes these occurences resulting in a better
targetted search. These don't apply to methods 1) and 3)!

3) In the c't-CDROM Database. This option is only useful for people
with the c't-CDROM (the 1994 c't magazines in HTML format)!
In this case the HTML files themselves aren't searched, but the
index file on the CD is accessed instead. So that HTML-Browser knows
where the files for this CD are kept are, you need to fill in the
appropriate section of the 'Paths' dialog box - the HTML documents
(in \HTML which also contains the file DEFAULT.HTML) and the index
database (\UNIX\CT94.DAT). As in the previous method, matching
documents are made into an HTML document calle results.html which is
then opened.

Using HTML-Browser

All the functions of the program that are controlled by the menu bar
can also be accessed by a popup menu. This menu is brought up by
clicking the left mouse button on the viewer window (not on a link).
This is essential for desk accessories which can't install their own
menu bars. Clicking on a link using the right mouse button will display
the address of the page it links to.

Technical Details

Currently HTML-Browser cannot be used on-line on the Internet using
TCP/IP.
The program understands the majority of the HTML2 specification. The
form and entry functions are not yet implemented but since these are

only really needed on-line their omission shouldn't bother anybody. The
same applies to 'Image maps'.
Transparent colour images will be displayed, where available, using
greyscales.

Limitations

- Embedded images can only be viewed in monochrome (or greyscales).
- Can't access the internet on-line directly.

Possible future updates

These depend on a good level of response from users. No support means
no development!
-Improved documentation!
-Support for the HTML3 specification (tables, forumlae, etc.)
-Displaying embedded images in colour
-Better font setup and handling of bitmap fonts
-Online Internet access. If you're prepared to program this should talk
to me!

Please feel free to make further suggestions and constructive
criticisms...

History

V0.8ï¿½ 20.04.1995 -First release version

V0.9ï¿½ 15.05.1995 -Reduced memory requirements
-MTOS Drag&Drop (ARGS) supported
-External programs will now run under singleTOS
-Error reports are now more descriptive
-Bugfix: when running as an accessory no longer
tries to invert (non-existant) menu items
-The .INF file is now found even if HTML is not
started in it own directory.
-Is now a lot more tolerant of buggy HTML file
syntax. -home.html is now loaded on startup if
possible
-Hotlist

>numbers in the UK please ?

Try getting the nodelists for Atarinet and NeST. These are Atari
specific networks. Only ring those that have CM(continuous mail) after
there name as the others could not be open to the public.

Some boards that have a lot of Atari files and up to date nodelists
are:
Fortress BBS 0181 244 9825
Tavern 0181 445 6514
Micromola 0181 316 7402
Folkestone 01303 249306

As you can see I live in the South East. It might be an idea to have a
chat with the sysops. They could help.

>board will not work.

I agree for "The Link I", but there are non-"+" AdSCSI boards that do support parity. I know for sure. I own one (dated 1989), all the drives hooked to it have parity checking enabled (a Maxtor 7290S, a Seagate ST157N, a Wangtek 5150ES).

There are also AdSCSI+ that do not support parity. The parity bit feature must have been added somewhere in 1989, starting with the AdSCSI/+ boards that have an extra piggyback on them. The only difference between AdSCSI+ and AdSCSI is the real-time clock on the "+" model, residing on-board as SCSI device #6.

At work, we have a fairly old 520ST (actually, it's the very first "NOT FOR RESALE" ST Atari delivered to us in July 1985) equipped with a Hard&Soft TOS Extension Card with IDE, and a Conner CP2024 connected to the latter. The drive is 2,5" and fits into the 520ST's housing. And this definitely works. We're using AHDI 5.00 to autoboot the machine from this internal IDE drive.

Well, the _material_ is almost indestructable, [large font on] BUT:

The magnetization, i.e. your data, faints. As fast as any audio tape does.
After two to four years, you'll see read errors and lost data. That is why
optical storage media exist - data last 10 to 20 years there.

I've been able to borrow a Crazy Dots II graphics card for my TT.
I am using NVDI 3.x on my 'normal' TT.
Does anyone know if a version of NVDI 3.x exists for ET4000 based graphics cards like the Crazy Dots II ?. There was/is an NVDI/ET4000 version of NVDI 2.54.
In the adds I see only references to a version for the Nova graphics cards.
Any more information is appreciated.

Are you sure you've set all the levels to 127 in Monitor, Mixer and
Audio Editor Segment Volume? When I got my FDI I tested the optical
ping-pong between a DAT and CAF, and I lost only 2-3 Db. Steinberg
told that they've had one other bug-report about the same thing, but
they've not beem able to verify the problem. So maybe it's a Falcon
model related problem.

Later I heard that there are now two types of FDI: 16-bit and 24-bit.
I don't know if the bit upgrade does any good for the Db-loss, but
you can get an hardware upgrade package from SoundPool (10 dollars
or so) that makes the FDI 24-bit ready. Check the bottom of your
FDI, there should be a sticker "24-bit ready", if it's a newer model.
SoundPool and Steinberg FDI's are the same.

Then again, such big a loss of level might be caused by AI-1 or
ADAT level settings also.

Source record: 163544

] You should have had some price from writing something like this.. Finally
] i'm no longer alone on this one 8-) Well spoken!

I've had this opinion for ages. I copy the software, delete it if I
don't like it, and buy it if I do after a couple of weeks. That way, as
said, I get to test it properly to see if it does everything I want,
and then when I pay for it, I get all the updates, the manual etc.

(Well, actually, the dozen or so shareware titles I've registered ceased
to be supported about a week after I registered them, so I'm rapidly
going off the idea, it seems to happen to all but the very major programs
(GEM-View, Connect etc.).

Nothing wrong with try before you buy. This concept has earned Gribnif,
and other companies a lot of my money. If I hadn't borrowed a friends
Neodesk 3 for testing purposes, I would never have found out how
marvellously useful it is, registered it, and promptly upgraded to
Neodesk 4, buying Geneva while I was at it. In the world of Atari, it's
about the only way, as you sure can't try the software out at a "local"
dealer, as they're few and far between. As long as everyone gets their
money in the end, so what!?

And if a program is of little use, and you delete it, then you save yourself
a lot of money, as virtually no company will make an easy time of returning
the program to them and getting a refund after you realise after 2 weeks
that it doesn't have all the features you want.

Ellis -

You might want to check out the Atari MIDI Processor (AMP). I have some demos of it on my FTP site (ftp.netcom.com in pub/la/lashower/amp). AMP is a very easy to use 128 track step entry sequencer. It should run fine on all 680x0 Atari computers (as long as it is running in ST-Medium or ST-High). The sequencer was writen entirely in assembly language and features a very efficient sequence data structure: about 1,000,000 notes (that's note ON and note OFF) per 4-megs of RAM.

AMP also features some nifty graphics and a karaoke lyric display during playback. You'll probably find AMP ST to be a cross between a very suped up version of the Antic Music Processor and Lee Actor's MIDI Music System for the 8-bit Atari's.

BTW - The sequencer engine used in AMP ST was ported and used in Star Wars Arcade for the Sega Genesis 32X.

From: darkforc@tiac.net
Message-ID: <3s3bb3$ibl@sundog.tiac.net>
Source record: 163546

I was wondering if the MiNT distribution I downloaded off a.a.u.e. would work on Gemulator 4.0? I am going to be buying the Gemulator package for my 486. I don't have an Atari ST anymore (I gave it to my sister as a birthday present). I would like to start using all my old software again, and start learning some of my old apps. like Calamus, and the MiNT programming I was getting into shortly before I gave it to her. I figure if it runs on the Gemulator, and I upgraded my 486 to a Pentium, then the multitasking of MiNT wouldn't be as painful as it was when I had my Mega 2.

I don't know much about that PC Emulator, but there was one written a few years back called PC DITTO.

PC DITTO ran even on a 512K machine, but it made it run super slow. It is like comparing a XT to a Pentium for speed. The Atari is equal to the XT while the XT equals the Pentium. That is how slow it is. I read the docs to PCXformer and the author says that a 10:1 ratio is best. If you want to emulate a computer your host computer should be 10 times faster than the computer you are trying to emulate to get best results.

Did you try to set the mixermap's volume fader to maximum?
It's nothing to do with A/D stage. That's the ADAT's roll, when you
record audio onto the CAF via digital, anyway.
Also, it's possible to higher the level up using CAF's offline functions.
Though, it's better if you do it before audio becomes numbers.

Good Luck.

Takashi

>

I didn't say frame compensation, I said demo timing. There are problems with
using a timer (e.g B) for timing because if you are running off the vbl then
you might miss events etc. (OK, I know that can be fixed, but it's still
hassle).

> I think setting the 'active edge' bit solves this problem - its 3 lines of code
> for this (gosh.. VGA is such hassle!)

I didn't know about that, obviously, or I wouldn't have mentioned that point.
I don't know if this works, I'll try it.

> Why didn't you just create 320x100 VGA mode... to do this you 'create' a 320x200
>video mode with some software like 'blow-up' and then grab the
>values for this mode and set the linedoubling bit..... (not much hassle at all)

Duh! That bit is already set, should I try setting it again ;-) I tried creating
a 160x200 VGA resolution to maintain some of the speed benefits, but it only
worked for the first scan line (I don't know why).

I'll say it again, that bit is already set for that mode (in VGA)!!

> It seems *madness* to write demos for RGB when only about 10% of Falcon owners
> actively use their machine with one of these monitors. I can't believe you

> disks.

Wrong!

High Density discs actually have a THINNER disc platter, and require less "signal strength" to put the data on a disc. The disc media is different as well.

Using a HD disc in a DD disc drive may cause the signal used to write data on side one to actually write to side two as well. Obviously this is not desirable.

Also, the surface of a HD disc is "rougher" (albeit not discernably different to the human eye) than that of a DD disc. Using it in a DD drive will actually damage the read/write heads of the DD drive.

Sorry, I didn't explain myself clearly - you boot up in 320x480 and then use
the blowup software to reduce the number of lines to 200. So you have a resolution of
320x200 on screen - you then RECORD the video hardware values and then
SET the LINE DOUBLING bit and hence get a 320x100 resolution. If the refresh
rate is too high then you increase the number of 'border' lines vertically and
horizontally if necessary - and hence decrease the refresh rate, I can get
320x200 at 50 or 60hz in this way. Easy peasy lemon squeezy!

>Alan.

Hope that helps.

In a previous article, gs01tph@panther.Gsu.EDU (Tommi Pekka Hietavuo) wrote:

> Please, do _not_ think that I'm trying to defend criminality.

Not at all, Tommi. By and large, you have presented very sound, logical arguments and a lucid analysis of the causes of the problem. I applaud your rational efforts. Not everyone in this group is capable of doing so.

> I understand your feelings as a program developer, Hutch - and I respect
> your right to be angry, when people take advantage of you without paying.

Well, my anger is much more a result of the callous attitude that some people have in regards to hurting others. Piracy hurts us all, but it's a personal affront to developers (who are users, too, after all).

> But in order to stop piracy, we just can't tell people: "stop acting
> criminal!", when the reasons behind piracy still exist. Do you agree?

Only in part. Regardless of the 'reasons' behind piracy, I do not believe we have to tolerate it. Accepting it as an unfortunate 'fact of life' is much the same as condoning it. Violence exists in the world for many underlying social reasons. But we shouldn't have to accept it as a given.

Stealing software, for whatever purpose, -is- still illegal and any advertisements in this newsgroup that include copies of commercial software should not be tolerated by the rest of us. That is what I complained about (Murchison's advertisement) in my original post. It was not intended as a launch into another tirade against piracy.

I am _much_ more concerned about the moral decline that rationalizing software theft brings about than I am about the loss of any potential profits, the decline of Atari, or any other such temporal concerns.

I will continue to speak out against the general acceptance of software piracy because I believe it is damaging not only to the industry but to our society. But in the end, it's a personal decision each of us must make.

The exact words of the ST Format article are "The plan was to emulate the Atari's 680x0 on Power Macs. In September last year this was deemed too time-consuming." As they don't say anything else about emulation, that leaves the reader with the impression that there was not going to be a Power Mac version. I am not surprised that STF got it wrong; even if it was true at time of interview, they could have checked further.

They go on to say, in what seems like a quote from Thomas although quotation marks are not used, "A native version for Power Macs would be quite hard to do, and would require direct support from Apple USA." Is this still true?

A 520 ST is very similar to a 1040 ST. The processor is a 6800 running at
8 mHz. It has Half a meg of ram which can only be upgraded with an
aftermarket kit such as Z-Ram. If you intend to run modern software you
will want to upgrade the memory right away. The stock version only had a
half sided floppy disk if I remember correctly. You will need an origional
Atari monitor since other monitors will require difficult to find
conversion hardware.

I would have thought this was clear enough ..... ask the producer to remove it from the CD or to send you some compensation for breaking the terms of your software.

I would think he'd be more happy to send you some money .. after all he'd have a hard time removing it from all his CD's :-))

John,

What you really want is "IdeaList" (latest version 3.6), available on
just about every ftp site. This little print utility is in my opinion
the finest piece of shareware I've ever come across and worth many times
the 20 DM fee. In fact I've saved that much 10 times over in paper and
toner since I got it. You can quickly handle even and odd passes, with
individual margin offsets for binding, two sided, and multi-column pages
as well. Features are far too many to list, but give it a whirl. The
author, Chris Bartholme, provides ongoing support and is continually
improving it.

Eric

Czesc,

Do-it-yourself-kit without CPU: 330 DM
Ready-to-use-33-MHz-version: starting at 665 DM
Ready-to-use-50-MHz-version: starting at 755 DM
FRAK030 (FastRAM card): starting at 230 DM

This is taken from ST-Computer 6/95, page 27. Sorry, I don't have any more
detailled information.

>
>Black Hole BBS 808-696-7763 14.4kb 24hrs BBS Express ST
>

If you tell us what programs you're trying to get to work, we (i) might
be able to provide the needed help.

As for your origin line, i fear you may get a problem, cause as far as
i remember Express BBS can't handle a frontend mailer. But i could be
wrong on this one. Alot of people here should be able to help you on this.

You could also tell me in what country you live, and i can dig out some
Fidonet/NeST/Atarinet/turbonet addresses near you, where you might be able
to get some more direct help.

Greets
Kim

Ps. as for programs, a "simple" system (freeware) could be set up using:

IOSmail (mailtosser)
Binkley (Frontend mailer).

Hello,

I am sorry that the following questions should already been answered in the FAQ. However I cannot find the FAQ and could anyone please kindly help me? Yesterday, I came across a special sales of only a few 520ST in a shop. Since I know nothing about the ST's, I asked the salesman for help. It turned out that the ST is completely strange to both of us. Could anyone give me a brief description of the 520ST? The package includes a 520ST with built in 3.5" floppy drive and some disks (I doubt if they are still working). I would like to have an external modem (RS-232 type) hooked to it for dialing to my school. Is it possible? Also, what is its video output (PAL,NTSC,RGB etc)? Can a MSDOS PC read/write the ST formatted disks? BTW, could anyone please mail me a FAQ?

Thanks in advance.

I see alot of mails going on this subject....

I have been using reformatting 1.44M HD diskette to 720K on my ST and been using them for ages. No lost data etc. The reason why I am doing so is because it is easier to get HD diskette than DD diskette (some shop don't even stock DD diskette). Maybe one reason why it works well is probably because I replaced my Atari FDD with an PC FDD, when the Atari FDD died.

Hi,

You'll find that the proverbial picture has been removed from later versions of issue 3. It was discussed at the Spotlight show and removed on the Monday afterwards.

Merlin would like to say that even though the issue tried to deal with a serious problem on the Internet, the magazine did go too far with the picture but has done everything it could do to rectify the situation for those who subscribe through us and hope that this one small incident does not detract from readers enjoyment of this excellent magazine.

Bye.

Phin

: Cheers,
: John

It is on atari.archive.umich.edu in atari/Newitems as html09.zip (I believe).
I wonder if Phil Yeadon and Dave Levi, or any of the other people who are
planning their own WWW viewers fro GEM, would be willing to start by
doing the final crucial step on this program, ie the connection between
HTML09 and MiNT Net.

Anything to get a full graphical WWW for TOS as soon as possible. Then,
if they were still enthusiastic, they could use this code as the basis
for their own "Spider's Web" or whatever web browser they were working on.

I'm thinking now particularly of the Data Uncertain thing, or whatever
ZFC might have done beofre giving up on the idea.

I am tickled that my "secrets" post made it to the net from GEnie, where it was originally written. My only update to it is this: Xor works in MagiC but there are screen redraw problems, but they are non serious. You lose port compatibility though. XoR under MagiC will NOT see Log3 or Unitor. It will see Export. If you are hooked on Xor, then follow the advice in the previous post. MagiC will not help. If you want to run Soundsurfer, then go for MagiC and Utilize Autolink which is built in to Logic 2.01. Surfer is almost up to speed now, and Logic IMHO absolutely kills NSL. However if on the fly editing is your bag, NSL/XoR in Softlink is still state of the atari art.

Final note: If you have 2 STs, run Logic is one and Xor on the other. This is a far better multitasking solution than either SL or MagiC. Then get ourself a PC and run Quad Studio. You will have a system Mac owners will be envious of.

>Is it TOS1.4-4.?.

MagiC has never been TOS. It's a compatible OS of it's own, the former versions just were ST/TT specific (MagiC 3 doesn't run on a Falcon, yet). The main advantage is that MagiC 2/3 provide the user with preemptive multitasking, v. 3 also with alternate file systems and (AFAIK) pipes. The only drawback of v. 3 is that it still doesn't come with memory protection.

>Does it
>look like an STE , does it run colour?? How well does it run.

It supports colour depths of up to 256 colours yet, an NVDI driver for true colour is (again, AFAIK) under development. It looks like a Falcon, only with a replacement desktop.

>Thier is a well known saying, believe half in what you read and nothing in
>what you hear....

Even better known is the saying: believe half in what you read and nothing in
what you hear from Roger Sheppard.

From the LIESMICH [README] file SCSI-Tool 6.10/HuSHI 6.09:

[...]
GEMDOS 0.15 (TOS 1.04) kann auch mit doppelt so vielen Sektoren
umgehen, daher kann man auch 32 MB groï¿½e Partitionen anlegen, ohne die
Sektorgrï¿½ï¿½e zu verstellen.

`SCSI-Tool' hat dies nur auf spezielles Verlangen des Benutzers
gemacht (schon deshalb, weil solche Partitionen von alten
TOS-Versionen nicht benutzt werden dï¿½rfen). Nun hat sich allerdings
ergeben, daï¿½ auch alle anderen GEMDOS-Versionen (mit Ausnahme des
GEMDOS im Falcon (0.30) und des GEMDOS in `MagiC' (vormals `Mag!x')
noch einen kleinen Fehler besitzen, der allerdings nur in sehr
seltenen Fï¿½llen auftreten kann (dabei wird der Inhalt einer Datei
zerstï¿½rt, der Partition passiert ansonsten nichts). [5.12]

Glï¿½cklicherweise kann man Partitionen gewissermaï¿½en `impfen'. Dazu
wird genau der Cluster der Partition als unbrauchbar markiert, der an
der 32767-Sektoren-Schwelle liegt. `SCSI-Tool' macht dies beim Anlegen
solcher Partitionen nun automatisch; wundern Sie sich also nicht, wenn
andere Festplatten-Utlities einen als `defekt' markierten Sektor
entdecken.
[...]

Quick and dirty comprehension: except for GEMDOS 0.30 (Falcon) and the
MagiC GEMDOS, all GEMDOS versions from 0.15 (TOS 1.04) on still have a
minor bug. The contents of the sector [and the file using the sector]
32767 may be destroyed by it. SCSI-Tool marks this sector as bad when
partitioning the hard disk with >32767 sectors.

If you have another driver, this - of course - might not be the case,
though I expect HDDRIVER to have this capability also, ask Uwe Seimet.

SdB> a good text file that tells in Plain English how to use either one
SdB> of the fron end mailers for Fidoet?

Do you have Semper there ? That is so easy to set up its unreal , GEM and you just fill out all the dialogue questions and includes dox's should you require.

The mail tossers are a bit more fiddly I guess but should contain a commented sample config file which you edit to your settings.

Then you have the wonderful LED message editor ... why can't we have a usenet reader/editor that is even a tenth as good as that is :-(So much so I prefer my usenet stuff to go through a fido gateway so I can use it !!

Get a link into an NeST or Atarinet networked BBS which have user support areas for all the software.

4878. ANSI EDITOR FOR FALCON(VGA)

Newsgroup: comp.sys.atari.st
Date: 1995-06-20 00:00:00 UTC
From: Graham.Irvine@mettav.exnet.com
Message-ID: <803702174.4@mettav.exnet>
Source record: 163422

It was none other than -Unknown- who did write on 15 Jun 95 that ....
> From: Basis Plus <basis>
> Organization: Dept. Informatik, Swiss Federal Institute of Technology
> I've written a little ANSI editor for the Falcon. As much I know there
> is no other program like this for the bird... It is able to read and
> write normal ANSI files as they are often used in BBSs. Now I would
> like if there are other
> people interested in this piece of code. If so, please mail me
> directly. Perhaps
> I will release a public (freeware) version of it. (This includes an
> ANSI-driver
> u can use for your own programs. And it`s really FAST!)

Sure we are interested in it !!!! And you are right there is no alternative
for the Falcon really ..(there is an ST one which works on the Falcon but not
in VGA res)

I would have mailed it directly but your "reply to" line is missing somehow ?

4879. Re: Q:best hard drive driver on falcon

Newsgroup: comp.sys.atari.st
Date: 1995-06-20 00:00:00 UTC
From: Peter_Missel@ll.maus.de
Message-ID: <199506210123.a382@ll.maus.de>
Source record: 163423

>According to the Atari Compendium (April 1994 edition) page 4.16, a 'GEM'
>partition can only extend up to 16MBytes.
>A 'BGM' (BigGEM) partition is from 16 MBytes upwards.
>An 'XGM' is an Xtended GeM partition. This is usually done by AHDI 3.x,
>and involves making two or more consecutive partitons appear as one.
>
>The very first partition on a hard drive _MUST_ be a 'GEM' partition.

Read my lips: N O I T D O E S N O T !!!

Any TOS version can definitely boot off BGM partitions. The first partition of any given harddrive can be as large as possible on this particular machine, which is 255 MB for TOS <= 1.02, 511 MB for TOS <=3.06 and 1023 MB for TOS >= 4.00.

XGM partitions allow for more than four partitions on one physical drive. They are a kind of root sector extensions, containing those partition infos that didn't fit into the original root sector.

GEM partitions can extend to 32 MB on TOS 1.04 and up, with TOS below 4.00 having a little but nasty bug that can be worked around by the formatting software.

bye, Peter

4880. futurenet:STformat

Newsgroup: comp.sys.atari.st

From: macdonald@cfcsc.dnd.ca
Message-ID: <macdonald.230.0009EDA2@cfcsc.dnd.ca>
Source record: 163424

I was attempting to contact the ST Format portion of Futurenet via my IBMclown
at work through Netscape and I keep coming up with nada, zero, nothing!
INetscape tells me that the host has been contacted, and its awaiting a reply
- it usually stops right there. Sometimes Netscape says it is recieving data,
but still the end result is the same. Does anyone else have this difficulty?
I was hoping to check out the Eagle article for info.
thanks for any help/advice.merci

- to find the numbered address of the FTP site, use the following command,
while inside FTP: ftp> !host FTP-address [CR] i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions: [CR]= carriage return/return/enter
----
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR]
OR use the (IP) number address, NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once.
i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having

to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX
13) close [CR] to close the FTP site you're currently on, so that another site can be opened without having to set bin, hash, prompt etc. again.

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on which the programs were intended, or in UNIX ....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after uncompressing .Z and/or .uu.
Use the appropriate decompression program for this.

- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys, xlinksys etc...) (ALL files with "sys" in their names)
i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh, xlba.lzh etc...) (ALL files ending with ".lzh")
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

Part of this is dependent on you having the GNU msdos-utilities available at your site. If you don't, ask your local system operator how to transfer files to/from MSDOS disks.

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:

- mdir [CR] to show disk-directory/space left.

- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)

- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for "low density")

- mcopy a:{filename on disk} {copy filename} [CR] to get a file from disk to computer. i.e. "mcopy a:dlist.txt test1.zip"

- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

- eject [CR] to eject disks from disk-drives that don't have "eject buttons".

You may want to wait a bit. According to ICD (6/19/95) the
driver for the Zip drives which was posted on ComuServe and GEnie is
still bugged and has frequent write failure errors. They're still
working on it!

> NEVER EVER USE HD disks on a Standard 720k disk drive, they will Fail...

Strange, its worked fine the few times I have tried it. Admittedly it is unwise though, HD disks being thinner and rougher than DD ones you risk data loss.

>Only buy the best type of disks, (TDK, Maxwell etc) and format them 3 Times
>at 10 sectors 80 tracks, unless you are doing direct copies, but please format

What rubbish. Interesting isn't it how I buy the cheapest DD floppies I can find, format them once and never have any problems. I once bought some branded TDK disks and 5 of the 10 disks in the box wouldn't even format. My cheap DD disks are even formatted to HD, 84 tracks, 21 sectors and still have no problems. My hard drive is backed up on them and I've never had any problems yet.

> Store all disks away from heat/dust/light etc...

Store away from _extreme_ heat/dust/light. Normal conditions pose no problems. Heck I've dropped a dropped a disk in a rather manky swimming pool and recovered all the data from it. I've poured coffee over a pile of them and lost only one file from one disk. Floppies are a lot tougher than people seem to think.

Martin,

> I'm trying to find an internet site (Telnet, WWW, etc.), tha
> pick up Atarinet. All I can get locally is FIDO, and haven't
> to pick up Atarinet for a couple of years now. Surely theres
> one BBS with both Atarinet and Internet access?

M > Yes there is Puddle City right on your back door. :^>

Unfortunately, Puddle City is a long distance call for me. I can't
afford that on a daily basis...

And, to my knowledge, I can't Telnet into Puddle City can I?

I'm looking for a way to pick up Atarinet without the long distance
phone call, by Telnetting in over the Internet.

4892. ANNOUNCE: MagiCMac - Atari emulator for Macintosh

Newsgroup: comp.sys.atari.st
Date: 1995-06-20 00:00:00 UTC
From: tt@muc.de
Message-ID: <tt-2006951507490001@tempel.muc.de>
Source record: 163594

(Sorry that I have to post this info here, but when I sent it to the moderator of comp.sys.atari.announce, nothing happened, not even an answer why not)

MagiCMac is an alternate operating system for Apple Macintosh computers. It allows you to run Atari ST software on your Macintosh in cooperation with Macintosh applications.

MagiCMac runs on Macintosh computers with System 7 and a 68030, 68040 or PowerPC CPU. We recommend at least 6MB of RAM installed on your Macintosh.

On any of these machines MagiCMac is faster than an Atari TT, up to 4 times in average.

The demo will run 15 minutes.

The english demo version 1.2.1 has been uploaded to info-mac and umich archives. Info-Mac mirrors are available all over the world. The file's name is magic-mac-121-demo.hqx, in the subdirectory app.
Attention: There's a demo with version 0.53 around on the mirrors, too. Don't download that version, since it's older and in German language!

To extract this archive you need Stuffit Expander (freeware) or Stuffit Lite (shareware). If you haven't downloaded this file using a program on a Macintosh, you'll have to decode it first using MacBinary (Stuffit Expander does this automatically, Stuffit Lite has a function in the menus for it).

Thomas

Here's a list of some info-mac mirrors where you might find the file:

The best program has to be Picswitch 1.01. This program is
available at HENSA for downloading, and it converts Degas
pictures (any resolution), NEO pictures, GIF's, Tiny's,
Paintbrush PCX files, basically everything but will only save
in IMG format. This seems to be what u r looking for.

Cheers,

Dave.

You will need SpeedoGdos for PAPYRUS GOLD (demo). That's Write 2
or That's Write 3 will certainly do what you need and a whole lot more.
It even has built in SpeedoGdos so you can use Speedo fonts without
actually buying SpeedoGdos (version 3 that is). I don't know of any demo
versions but you can Call COMPO (US) @ 415-355-0862 (California). I think
most places sell That's Write 3 for $179.

> But could I rip the SIMMs (say 4x1meg) out of an old 386 and plug them in,

Yes...

However... I know for a fact that 1 Meg x 9 SIMMs with *9 chips* on them will work. But PC SIMMs come in other configurations, such as 3 chips on a SIMM. I don't know from personal experience that those will work. They should, but there sometimes are compatibility problems with different configurations of SIMMs on PCs, so it *might* matter to an STe.

If you have an old 386 with 30 pin SIMMs in it, go ahead and try them. It won't hurt anything, and it might work.

> or do I want macintosh ones?.

No, although 30 pin, 1 Meg x 8 Macintosh SIMMs will work too.

> Does the STe care if they're 8 or 9-bit?

No.

> Because if I can use standard PC SIMMs, I can probably get some for

>
>Eric

I can't give you a for sure answer as I haven't tried the latest MiNT
but I do know that MultiTOS (which really has MiNT under the covers)
ran fine on Gemulator 3.02 when I tried it. Since Gemulator 4.0 is a
superset of 3.02, there should be no problem. You might have to run
it off the Gemulator 3.02 virtual disks as I'm not sure if MiNT does
any direct to disk sector i/o.

In any case, as another user pointed out, if you want to multitask
Atari programs on Gemulator 4.0, just run multiple Atari ST windows,
giving you a completely separate "machine" in each window while
still being able to share files between them. This way you can run, say,
Calamus in a larger window, while you run some other program in the
standard size window. Or what I do every night when I'm reading email
in a hurry, put two modems in your PC, open up two Gemulator 4.0
windows, and call GEnie and Compuserve at the same time.

> problems.mine has the bass boost but i don't know the age (early '93 i
> think).can some one tell me what to do to cure this problem if this is
> the case.thanks dick

Hi there, Dick.

The problem can be the CPU clock not being stable enough for Cubase Audio, but also a number of other things; fragmentation of the hard disk,size of the partitions (with HDX max 256 MB per partition), if the drive tries to calibrate every now and then or if the drive is too slow. According to Steinberg, it's necessary to have a hard disk with an access of about 10ms to be able to use 8/16 tracks simultaneously. Otherwise You'll have to use the RAM track function to get some load off the drive, or get another drive and part the audio tracks between them.
If You'd like me to send a guide of how to get rid of the problems, send me a mail. Please tell me if I can make a 'file attach' or if I have to uuencode the file (file attach doesn't work in all nets, regretfully).
It contains general instructions about the click problem, as well as the schematics of the necessary CPU clock modifications.
I use one 1 GB (9 ms) and one 2.1 GB (8.5 ms) Conner and they work perfectly, but according to the distributor of Cubase here in Sweden, these Fujitsu drives should work: M2692SA (700 MB), M2694SA (1 GB).
It doesn't seem they've tested the one that You have.

Best regards

>
> Has anyone had any similar experiences?

Yes - an STFM didn't like a Gasteiner drive - it booted OK but the minute you started to stream the system fell over just like yours. Eventually gave up and got my cash back. A few months later I picked up a Protar disk dead cheap and it worked perfectly! When I had TOS 2.06 installed by System Solutions they managed to swap my Drive cable for one of theirs and it stopped working! A happy 30 minutes or so testing cables showed that only about 50% worked on my ST.

I suspect that problem is due to the DMA chip being borderline and is therefore very sensitive when it comes to timing - which is why some cables dont work (incorrect capacitance).

Best thing to do is find a friendly dealer who can let you try out a few cables, or failing that is willing to try fitting a new DMA chip on a "if it doesn't cure the problem we wont charge you full price for it".

Steve

The main UK wholesalers refused to handle Issue 3, because of some of the pictures that accompanied the piece on internet porn. (eg dog shagging woman).

My understanding is that the mag will be reissued with the offending pages removed.

Hi to everebody out there !

I�m looking for the following software:

SAM-2-DISK by Dattrax Software UK, a tiny little harddisk-recording programme for the ST (for using with a sampling cartridge like Replay 16, etc.).

The other one is BREAKTHRU 2 by Gajits Technologies UK, which makes it possible to use samples within this sequencer programme via Replay 16.

Who wants to sell this (original) software to me (incl. the manuals)?

Answer soon !

Oliver :-)

4912. MagiC 3 for Falcon ??

Newsgroup: comp.sys.atari.st
Date: 1995-06-21 00:00:00 UTC
From: chainxor@kom.auc.dk
Message-ID: <3s9bnh$21i@news.iesd.auc.dk>

Does anybody know if MagiC 3 for Falcon is released yet ?

I've heard that it should be in this month.

Keep Cool and Flying...

>Will it work in GEM-only or do i have to run MiNT, like with Chimera ?

It can't work with GEM only as GEM provides no networking facilities.
Currently MiNTnet is the only suitable networking software for the ST.

I assume it will be a GEM program though and not require X windows as
Chimera does.

4914. Taking a Falcon to Germany...

Newsgroup: comp.sys.atari.st
Date: 1995-06-21 00:00:00 UTC
From: nj1@ukc.ac.uk
Message-ID: <11803@falcon.ukc.ac.uk>
Source record: 163439

Hello,

Well, due to my course I'm off to study in Aachen, Germany in September.
I'll probably be taking my UK Falcon with me, so is there anything I need
to know??

My main questions are:-

1. Can I change my keyboard map to a German one to access all the umlauts
and that thing that looks like a B (can't remember it's name!)???

2. What TV system do they use in Germany - as I have a UK PAL TV modulator
built in, would I be able to use German TV's for any RGB stuff??

3. I take it I won't need to worry about power supplies, other than changing
the plug???

Any help on any of the above questions, or any advice in general (any good
Atari stores in Aachen???) would be appreciated,

Neil.

Get a program to change the nvram settings. German character tables and
menus are built in :-).

>2. What TV system do they use in Germany - as I have a UK PAL TV modulator
> built in, would I be able to use German TV's for any RGB stuff??

I think they have the same system as you have (and we have in Sweden,
PAL 50 Hz).

>3. I take it I won't need to worry about power supplies, other than changing

Germany has 220-230V/50 Hz, I think.

Regards, Christer.

The GCR function works fine on my TT - if you have an HD drive you must
READ (ie open a window) for the drive with a 720K formatted disk in it
under GEM/TOS before you run Spectre. Note you can still only read/write
800K mac floppies even with an HD drive.

4917. DUftp FTP client for GEM

Newsgroup: comp.sys.atari.st
Date: 1995-06-21 00:00:00 UTC
From: "Craig. Graham" <Craig.Graham@ncl.ac.uk>
Message-ID: <DAJBHw.60D@world.std.com>
Source record: 163442

ftp.cnam.fr

==========

DUftp
(C)1995, Data Uncertain Software
==========

What is DUftp?

DUftp is a GEM based FTP (File Transfer Protocol) program for use
with MiNT and the MiNT-net networking drivers. You can use DUftp
under MultiTOS, or just under plain GEM, as it uses non of the
MultiTOS AES extensions. You can use DUftp to fetch files from
any FTP server on the Internet (or any other TCP/IP based network).

This was inspired by Rapid Filer on the PC, which provides a very
simple way of transferring files (although Rapid filer does a lot
more than DUftp, as it's very like Kobold in the way it speeds up
disc access).

Why Should I Use DUftp?

Well, the standard FTP for MiNT-net is a text based Unix port, and
although it works well, it looks a bit naff. DUftp is loads easier
to use. As well as the just transferring files you get the following
extra's:

o Web-browser style bookmarks for fast access to your fave sites.
o Automatic logins.
o Full modern GEM interface (windowed dialogs all round).
o Runs under MultiTOS or plain GEM.
o Drag & Drop style file transfer.
o Multiple connections at the same time (under MultiTOS).
o Abuse from unix fans for being a pussy and wimping it.
o Fast, reliable transfers (code based on the BSD Unix ftp).
o Envy from PC users who have to pay for this sort of thing.
o AES 4.1 iconify support.
o Pretty colour icons.
o No command lines to fart around with.

o Integrated with DIP to handle your dial-up SLIP connection
for you (simple Connect/Disconnect menu options).
o Only uses 200K when running.
o Context sensitive help.

Credits

Written by Craig Graham of Data Uncertain Software.
GUI done with Interface2, coded using Lattice C 5.52, all on a falcon030
4/32Mhz.

Thanks go to the following people:

o Steve Sowerby for the initial work porting the MiNT-net libraries to
Lattice C.

o Chris Ridd for the MiNTLIBpl46 port to Lattice.

o Kay Roemer for MiNT-net.

o All the folks who do beta testing for me (DUftp & CLA).

Craig.

I used to use Vanterm on a 520 ST. Works just fine and is shareware. It is written by a fellow american Bill van Nest so you should be able to find it over in the US - it's on just about every UK board that I know of!

The programme you need is NVRAM CPX. It should be available from AAUE in
the Falcon section, or from many other ftp sites. There is also another
app available to do this, but I am unsure what it is called.

The system I have consists of the following.

1. 520ST cpu upgraded to 1 meg of memory.
2. The B&W monitor. (Atari)
3. The Color monitor (Atari)
4. 1 Single side disk drive. (Atari)
5. 1 Double Side Disk drive. (Atari)
6. 1. Aatri mouse.
7. Lots of software.

Everything works fine. I will gurantee it against DOA.

Asking $175.00 .

also I have a CZ101 that I used with it.
Asking $35.00 for the CZ..

Total $200.00 for everything.

Northern Indiana area.

Shipping can be discussed.

Yes, for about one week now. Haven't you read my announcement?

Look with archie for "magic-mac". You should find some places with the 121-version from june. Do not download the version from march - it's German and outdated.

4926. Pagestream font question

Newsgroup: comp.sys.atari.st
Date: 1995-06-21 00:00:00 UTC
From: hellman@teleport.com
Message-ID: <3sasmi$mdg@kelly.teleport.com>
Source record: 163451

Hello All,
I have gotten the Sterling CD with tons of Type 1 fonts for
postscript printing on Pagestream and they work fine with one
exception...the screen drawing is very slow (out of draft mode). I think
this is because they do not come with screen display files, as
Soft-Logik's did...the files that have extensions like .12H.
Is there a way to make screen display files from the Type 1 font
files to speed up screen display?
I'm working with Pagestream 2.2b.

Thanks.

4928. Dallas Atari Show

Newsgroup: comp.sys.atari.st
Date: 1995-06-22 00:00:00 UTC
From: sirsmedley@delphi.com
Message-ID: <5W1-2FA.sirsmedley@delphi.com>
Source record: 163352

Please note that the following is NOT an official press release!

The Atari Users of North Texas Computer Exposition

The Atari Users of North Texas (AUNT) Computer Exposition will be coming to Dallas this October in conjunction with the monthly DFW XChange Super Saturday activities at the beautiful Dallas Infomart. Show date is planned for Saturday the 14th. The actual show date will be finalized 120 days prior to the exposition on June 16th. The exposition, along with the Super Saturday activities, charge no admission fees and are open to the general public. The one day exposition is planned to begin at 8:30 AM and run until 4:00 PM. A Friday evening pre-show get together and a post show get together are also being planned.

October is a great time to visit the Dallas Metroplex. The DFW Xchange Super Saturday activities are a monthly computer extravaganza where thousands of computer enthusiast get together, share their computer interests and enjoy some of the best computer and high-tech electronic buys in Texas. This October will be special for us Atarians because many of our finest developers and dealers will be participating in the activities.

The Dallas Infomart facility, a replica of the famous 1895 world fair crystal palace, is located in the heart of the Dallas commerce district at 1950 Stemmons Freeway (I-35E). The facility is leased by the DFW Xchange each month to provide a community service to all computer users in the Metroplex area. The Atari Users of North Texas is one of many participating user groups that help support this community service by sharing our Atari computer interests, general computer expertise and providing user assistance to our local Atarians and the interested general public.

As of 5/21/95, vendors planning on participating include; It's All Relative, Systems for Tomorrow, chroMagic, Crawly Crypt Corporation, Oregon Research, Dave Munsie and DMJ software. Vendors interested in participating can contact David Acklam at (214) 242-9655 or on-line on GEnie at D.ACKLAM or via the Internet at d.acklam@genie.geis.com.

Currently, the show date is NOT CONFIRMED, and looks like it will probably not be on the 14th, but either a week earlier or later. STAY TUNED!

Also, we have a few more confirmed vendors - Branch Always Software (makers of the GEMulator) recently signed on, and we also have a few others who are interested but unsure at this time. (actually, I am pretty sure there are at least two more confirmed vendors not mentioned here, but I don't have the latest list on my desk. But Dave can tell ya! E-mail him!)

Kevin W. Dolorico (kwd9152@is2.nyu.edu) wrote:

: Now that I own a Mac, I wonder what I need any ST specific software for.
: Oh well. I think this program is a great novelty, though...but I mean,
: once you invest in another brand of computer(Pentium-based or Mac),
: running ST/TT-software really won't seem as important anymore now that
: you're exposed to much bigger software markets. Aigh!

You're wrong, my friend ;-) ... Every time I have to use those unbelievably unstable, unfriendly Windows-applications, my love for ST/TT -software just gets stronger! And speaking of Mac... It works better than PC, mostly, no disagreeing. But using PageMaker just doesn't give one kicks, after getting used to Calamus SL. And though Word Perfect, Word, and the other giants are fine pieces of software (and very slow, too - just think how long Word 6 takes to load on any Mac), somehow Papyrus Gold just feels better in my hands.

It doesn't help anyone, if the markets are bigger - if those bigger markets don't really produce nice, reliable, easy-to-use programs, but giants like Microsoft-products, instead...

: Of course... MagicMac won't switch any Atari Falcon Die-hards...so be it.

No, as Falcon won't switch any die-hard Mac or PC fans. So be it, and so it is =-) !

Roger Sheppard.. (sheppard_r@ix.wcc.govt.nz) wrote:

: Well its not on AA/Umich or Brunner, so does any one know a site
: that its on....

It's a bit tricky thing, this SoftPC... It works pretty well, although it was never totally finished. Nobody sells it, nobody supports it, it doesn't even officially exist. But though many people have a beta copy of the program, nobody wants to get a "pirate" -reputation, and admit they have it 8-(... Because though many laws in this world are stupid, and some definitely not worth obeying - a law is a law. And some laws say that it's illegal to give SoftPC Beta to anyone, or even have one in your own computer. Copyrights, that's the key word here..

What is, btw, this kind of siftware called - something that doesn't officially exist, that you can't buy anywhere, that many "gurus" use despite this all - and that is illegal to put to any FTP-sites?
Examples: AES 4.1, SoftPC.

G > strong contender; however, I would be primarily interested in
G > being able to run my Atari MIDI software (sequencers, patch
G > editors, etc). The question is: is what I have in mind
G > possible? What hardware do I need?

According to Darek Mihocka, the current Gemulator 4 board adds
MIDI compatability to the emulation equation; however, the question
remains whether or not one can use any of the programs that require
a hardware dongle in the cartridge port before they'll run (ie
Cubase, Notator SL, Logic), as I'm not sure if he's added a dongle
port. If you have any of these high-end packages you may want to
consider probably upgrading to the PC versions of your particular
program (E-Magic and Steinberg both offer cross-platform upgrade
paths).

Of course, Darek is here from time to time, so maybe he can give
a clearer answer - as well as tell us what MIDI programs do and do
not run currently on Gemulator 4........

In fact, TOS doesn't know anything about partition tables. It just
loads the root sector and executes it. From that time on, it's only
a question how clever the root sector code is (and AHDI's is
clever enough).

4938. Re: Atari in PC Tower case

Newsgroup: comp.sys.atari.st
Date: 1995-06-22 00:00:00 UTC

On 07 Jun 95, a message from Phil Yeadon to All popped out of the wormhole:

PY> From: phil@yeadontt.demon.co.uk (Phil Yeadon)
PY> Hi, my friend and I are just about to mount a TT and a Falcon in
PY> PC tower cases.
PY>
PY> If any one has done the same thing or has any similar expereinces
PY> I would be grateful for details or tips to make the whole job go
PY> smoothly!!!

Phil, I have put a Mega STe into a tower case. You'll need new ribbon cable for the drives and a really large case to get the TT motheboard in there - I used a "super server" full size tower, and mounted the MB back-to-front (there aren't any connectors on the front edge of the MB, but the mountign screw hole ended up being most conveniently located if I turned the board so the cartridge slot was on the top edge).

Get some IDC-type male and female connectors for the other ports (9-pin for serial, 25-pin for the printer) and make your own extensions - it's cheaper than buying them made-up. You can bring the keyboard connector out with a short 6-lead modular telephone connector (use a jack at the outside end, of course). The toughest part will be the monitor lead; mine is still running out the side of the case where a cover plate should be.

Best of luck!

Hello,
I'm seriously considering upgrading my 1meg Atari STFM to 2.5 (or
maybe even 4) meg RAM. What are the best/cheapest upgrades available? And
where can I get them in the UK?

thanks,

john..

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Can anyone help me, I have just fitted a High Density floppy to my TT,
all works well except there is no High Density format option from the Desktop.

I have been told by the supplier of the HD drive that one of the DIP
switches on the main board lets TOS know that you have a HD drive, but which
one?

Thanks in advance!

No, HD disk media is more sensitive to magnetic pulses, in order to pack
more data onto a disk, they had to use more sensitive media and a less
powerful write head or risk "bleeding"...

There was/is a discussion about this in the FidoNet Atari 8-bit echo,
apparently AtariDOS DD disks use 128 byte sectors, unlike PC that use 512
byte sectors, which means PC's cannot read AtariDOS disks, PCs can only
read DD disks from 8-bit DOS'es that use 512 byte sectors, I forget what
it was called, it was put out by Supra...

> preformatted.

Hmmm, I've used 1.44 disks as 720k disks on both my Atari and on an Apple IIgs, both of which had severe data corruption problems, I've long since stopped that practice...

Yep, it has a standard RS-232 port on the back, just plug it in there.

> its video output (PAL,NTSC,RGB etc)? Can a MSDOS PC read/write the ST
> formatted disks? BTW, could anyone please mail me a FAQ?

It outputs both TV output and RGB output, weather it outputs PAL or
NeverTheSameColortwice depends on the version, I don't know of any way to
tell.

The Atari will happily read PC 720k disks, if that doesn't work you may
have a single sided drive, try 360k. Having a PC read early-model Atari
disks is a whole other can of worms...

Chris Richardson (richards) wrote:
> Why use MiNT when you can use the multitasking of Windows?

1. Because Widows doesnt multitask. It task-switches.

2. Running one real multitasker (Mint) under another pseudo-multitasker (widows) will reduce speed to below a crawl, if both were running native code on the host CPU. If one has to gemulate a foreign CPU as well, the crawl would turn a Pentium 133 into a 8080.

Both the Medusa T40 & T60 and The EAGLE 030 & 040 are Atari ST/TT compatible
clones.
The Medusa T40 (32/64 Mhz 68040) is quite exspensive - about 2500 UkP with
8 MB Ram and a ET4000 type graphics card. Don't know the price of the T60.

I guess the Medusa is a kind of Atari-equivalent to the Amiga-clone "Drago".

The EAGLE is more affordable - about 1200 UkP for a 32/64 Mhz '040 based one
with 4 MB Ram
and a ET4000 type graphics card. And it's at least as fast as the Medusa T40.
The EAGLE can also handle PPC 601 & 603 and Alpha RISC CPU types.

There is also the C-Lab Falcon Mk-II, which is a Atari Falcon030 "clone" with
improved sound (better ADC's & DAC's) and SCSI-II harddisk access/transfer.
Im not sure of the price this machine, since C-Lab are ajusting thier at the
moment (so I heard :-)).

Hope this helps.

4962. Reviews of Fax and WP Software

Newsgroup: comp.sys.atari.st
Date: 1995-06-22 00:00:00 UTC
From: rmccall@mcs.dundee.ac.uk
Message-ID: <3sbvur$2rb@dux.dundee.ac.uk>
Source record: 163476

I am currently setting up some Atari Information pages on the Web.
I'd be grateful if people would email me reviews of certain products
namely Fax software (all available ones) and also Word Processors
(all variants). I do not have any FAX software but I will be reviewing
Papyrus and Marcel in the WP scene.

The aim is simply so that people can be referred to the web pages. This will
hopefully avoid the need for people to ask the same questions over and
over again (I have been guilty of this in the past).

Included in each review should be the products specification, price and
where it is available from. I shall decide in about a month or so which
reviews to use. These reviews should be YOUR opinions and not simply
regurgitated info from magazines. Note I will select the most intersting
reviews, but each product may have more than one.

Rod

>If someone can help - please send me a Mail. Thanks!

I'd send it to you, or put it on cnam.fr, but my access to the
internet Youngstown Freenet lacks a decent up;oad protocol. The only
one that works is Kermit, and only offers 98byte blocks and runs at
between 128 and 300 CPS (slow). I can get 1670 or there abouts on a
z-modem d/l, I hope someone else will be kind enough to put zip.lzh
up on Hensa or someplace else like it. Of course I now hear that there
is a few bugs in the file and we should wait for a later version from
ICD (They were gettting some write failures).

>100% Wrong, TOS 1.4 was fixed to support 32 meg partitions and the boot
>partition can be a BGM one...

50% Wrong. _All_ TOS versions < 4.0 have a bug that can lead to a loss of data when a partition has more than 32767 sectors, e. g. e GEM partition > 16 MByte. This bug can be circumvented by marking cluster 16383 or 16384 as bad even if it is not corrupted. (Claus Brod showed that the bug exists and that this trick works.) Some partitioning tools (e. g. SCSITOOL, HDDRIVER) "know" about this bug and automatically mark the appropriate cluster as bad if necessary.

I have just upgraded Ease to 3.5f. This version, however, looks for its files (eg. *.I??, ICON.CNF, ICONEDIT.PRG, etc.) in the path specify in the #_APP (which is C:\AUTO\APPS). It no longer looks in the EASE folder. My #_SHL is pointing to C:\EASE\EASE35F.PRG. If I move *.I?? files to C:\AUTO\APPS, all the data files (eg. ICON.CNF) loads except the programs such as ICONEDIT.PRG and KOBOLD.PRG and the HELP file.

Can anyone please help me? Thanks!

4977. Dynamic IP addressing with NOS

Newsgroup: comp.sys.atari.st
Date: 1995-06-22 00:00:00 UTC
From: Rob.Vousten@inter.nl.net
Message-ID: <Rob.Vousten-2206951946460001@kun99-15.nijmegen.nl.net>
Source record: 163491

Is it possible to use NOS for making a PPP connection that uses dynamic IP addressing? Or do I have to have a static IP address?

4978. Re: MiNT on Gemulator

Newsgroup: comp.sys.atari.st
Date: 1995-06-22 00:00:00 UTC
From: Chris Richardson <richards>
Message-ID: <3scha3$d8f@mmddvan.mdd.comm.mot.com>
Source record: 163492

OK, for the sake of argument (only... after all I went out and got Warped for true multitasking), What is the speed reduction incurred by running simultaneous apps in a true multitasking OS (MiNT) which is using emulated 68K instructions on a x86 machine as compared to running simultaneous apps in single-tasking OS (GEM/TOS) sessions on a non-true mutitasking OS (Windows) which is running native code on an x86 machine? Answers on a postcard, please.

The gist, as I understood it, of the original post was asking how MiNT would work with the Gemulator so as to get two apps working together, hence my post.

Windows may suck (amen!), but with reference to the topic of this discussion, the Gemulator only works under Windows. One may as well state "Ford Trucks suck" under a discussion regarding the merits of various shock absorbers that will fit an F150 pickup.

: I was hoping to check out the Eagle article for info.
: thanks for any help/advice.merci

The connection is probably just hideously slow. Since you're in Canada
(as am I) and Future Publishing is in the UK, that's a fairly distant
connection; on some UK servers I've had to wait a dog's age and then some
before I got anything useful out of the page. On others, the connections
are quite fast and it goes along just fast enough to stop me from falling
asleep. Generallyy, it depends on how busy the server is, how fast its
connection is, what machine it's running on and so on. And for a company
like Future Publishing, I'd imagine they get pretty busy.

On jens-and@dsv.su.se, Jens Andreasen (jens-and@dsv.su.se) typed away:
: Is there anybody here working for the distributors of MagicMac? I would
: like to put up some magic in the Apple-computerstore downstairs, but I need
: some support to cast the spells really good :-)

I am not sure who distributes MagiCMac in Sweden... but do know that
Indigo2 in Denmark fully support it. You may want to contact Tom
Thomason at the Falcon Pro Centre in Gothenburg, or even the Svenska
Atariklubben for contact details. Actually, I just remembered.. I have
the details with me right now...

Speak to Heine Svendsen on +45 86 20 16 55, fax: +45 86 20 12 04.
Their address is: Indigo 2, Montanagade 29E, DK-8000, Arhus C

You may also contact Sven Bornemark in Oxie.. he may have more info
too. E-mail him on sven@dada.ct.se

You are in Sweden, so you should have no trouble with Atari support at
all.

From: gs01tph@panther.Gsu.EDU
Message-ID: <3sdfcp$4v4@sphinx.Gsu.EDU>
Source record: 163367

Hutch, and the others who may be interested:

The research article about piracy I mentioned some time ago, is:

"Software Piracy: Estimation of Lost Sales and The Impact on Software Diffusion" by Moshe Givon, Vijay Mahajan and Eitan Muller.

Journal of Marketing, January 1995, vol. 59, p. 29-37

The source at least is quite highly respected, but everyone may read this themselves, and make their own judgements.
It'll be interesting to hear the comments..!

Greetings,
TH

It depends on what you want to do. If you just want to use your ST as a text terminal, you just need the vt-52 emulator which is on the disk furnished with your computer.

Pascal.

Better listen up, Tommi. When it comes to 'international stupidity' good ol'
Roger is the hands-down expert in this group! He's proven so many times. ;-)

>>What is, btw, this kind of siftware called - [...] that is illegal to put
>>to any FTP-sites?
>
>Well I was told its on a USA BBS, so if that is the case then it can be placed
>on a FTP site. ..

Yeh, right. Just because someone put it on a BBS makes it legit to place it
on an ftp site??? Oh... I forgot. This is the 'expert' speaking. :) I thought
maybe it was time to take good ol' Roger out of my kill file. Obviously, that
notion is a bit premature.

Considering the 'immense' size of our market, I doubt seriously if Insignia
Solutions really cares much one way or the other what happens to that beta
SoftPC software for the Atari. They can't or won't legally release it into
the public domain so it floats around as semi-pirated software.

My only question is... why would anyone WANT it in the first place? It must
be hideously slow considering how dog slow their software only emulators are
on a fast 040 or PowerMac. On a 16MHz 030 it must be -very- painful.

-Hutch-

5000. Ka9q news problem.. HELP

Newsgroup: comp.sys.atari.st
Date: 1995-06-23 00:00:00 UTC
From: geoffc@eve.adam.com.au
Message-ID: <3seqau$7j4@eden.adam.com.au>
Source record: 163375

Hi all...

Has anyone had problems recieving news with Ka9q/Atarinos software?
I am getting a nntp conection to my news server, but after saying
it is retrieving news headers I get messages like:

500 line too long
error while getting NEWNEWS - line too long

I can solve the problem by deleting newsgroups from my nntp.dat
file until the problem goes away, but this means I can no longer
get this news groups, else the problem reappears. My list of
active news groups is slowly growing smaller, so you can see
that this is not the ideal solution.

Any one else had this problem?

And does anyone have any ideas or solutions?

I am using v1.42 of ka9q.

Thanks for any help you can give.

Regards,
Geoff

No, I was looking for a way to ``get KA9Q/NOS to run in a VT100 emulation window'', surprisingly enough ... :) I seem to have found a solution in VT100EMU.PRG (so yes I will register it :>). I use dialup PPP to the nearest Compuserve node, and telnet from there to London.

I'd love to have NOS running as an ACC, with GEM menus to set those lovely things like ``echo accept'', and a choice of emulations ... well let's face it, all the source code is available, all it needs is a little time and energy ...

Hi there,

anybody know how I can change the order of installed ACCs, displayed on the
desktop's pull-down menu? Altering the boot order won't help. Any ideas?

Thanxx in advance!

Regards, Peter--

5006. Re: Pirating Software

Newsgroup: comp.sys.atari.st
Date: 1995-06-23 00:00:00 UTC
From: hutch@ilmen.lanl.gov
Message-ID: <9506231902.AA02906@ilmen.lanl.gov>
Source record: 163381

Jerry Dunham <dunham@devnull.mpd.tandem.com> is having trouble posting
to the newsgroup so he asked me to post the following for him:

There's another effect going on in a shrinking market like ours that gets
much less discussion than the piracy issue. Once a given market is
shrinking at a pretty good clip, people are able to buy good used goods
so cheaply that all the needs of many of them can be met by those getting
out and unloading. I know the largest share of MY Atari dollars goes to
sucking up used gear and SW at ridiculous prices. This leaves precious
few dollars for users to spend on NEW hardware or software, plus it makes
the new stuff look very expensive in comparison to the flood of used,
unless the supplier is essentially giving it away. WithOUT any help
from piracy this results in a very difficult market to survive in as a
supplier.

A market in free fall is NOT a profitable marketplace. The Atari market
is imploding.

5007. READ THIS, About ATARI CD MASTER, CD ROM PRODUCTS

Newsgroup: comp.sys.atari.st
Date: 1995-06-23 00:00:00 UTC
From: aa414@FreeNet.Carleton.CA
Message-ID: <DAn3yr.2sH@freenet.carleton.ca>
Source record: 163382

Hi Everyone,
By all the mail that I have received during the past few days, it seems like very few people actually have access to the comp.sys.atari..announce, and are not able to read the press release. So here is the press release for ATARI CD MASTER.

_____

Homa Systems House is proud to announce a New product, the ATARI CD MASTER (ACM). ACM is a an authoring system for a number of DOS/WINDOWS popular CD ROMS. ACM has the following features:

- easy user interface, fully multitaksing in a window
- pictures are viewable on 2, 16 color, 256 color modes, including graphics cards and the Falcon
- Powerful search features, with "narrow down" option. On TIME almanac, you can search the whole CD for a particular key word(s)
- Upto 4 text windows open, with one picture window
- Save, print, ...

The following CDs are supported so far:

1- TIME ALMANAC OF the 1990s. This CD contains all the TIME magazine articles from Jan 1 1989 to May 4 1994, will all the pictures. It also has the TIME MAN OF THE YEAR, the CIA FACT BOOK (tonnes of data/picture on various countries (>150), organizations, world statistics), MAPS, Almanac charts and articles. View portrait profiles on 12 major persons and events of the 20th century, highlights of each decade and all the presidential elections, and more! This is a great encyclopedia of world events. With ACM, you can access all the data files, pictures on any ST with monochrome graphics, or on VGA 16 color or 256 colors (TT, Falcon, graphics cards) up to 1280x1024, save and/or print them. You can also do a thorough search on all the articles/ pictures, and/or narrow down your selection to reach to your desired information.

2- TIME ALMANA, REFERENCE EDITION, This CD is very similar to the 1990s, except it only has the articles up to the end of 1993; however, it has the complete TIME MAN OF THE YEAR, from year 1927 to 1993, plus hundreds of other text and graphics.

3- UFO (I or II): This is an exciting CD with over 1300 articles, many of them with amazing graphics describing UFO events from prehistoric times to the present.

4- Space Missions: This CD contains over 1600 articles, with over 700 with astounding pictures on all the space missions form all over the world (USSR, USA, CHINA, England, ...)

5- Audio CD Master v4, "NOW IN 3D" which is the ultimate Audio CD player on the ATARIs. With this program (or accessory), you can play Audio CDs in the background of any application using any SCSI CD ROM, even the popular NEC 25, which no other player supports. It requires -> no <- other drivers (i.e., metados, extendos).

Version 4 has lots of new features/enhancements, 3D buttons.

Audio CD Master offers the following:

Play, stop, pause, resume, FF, REW, eject, track. skip options.

Track options allow you to specify a range of tracks, i.e., from 2-11, or play a single track, or play programmable tracks. You can assign up to 16 tracks to play, and also save them, so the next time you insert the CD, the program automatically asks you whether you want to play the previously saved sequences.

You can play anywhere within a track, i.e., track 4, minute 3, and second 11, for ultimate control eg: for musicians.

Displays the track names (by their name of the albums/and tracks) for the current CD, and also you can select tracks by their names (if you have a lot of CDs, you don't need to memorize all the track numbers anymore)

Works as a program or accessory, with any resolution above 640x400..It is also multitasking. Has an alternate window (a much smaller one) with all the main buttons (play, resume,pause, stop,track, rew, ff,...) in order to have instant access from within any
program, and avoid cluttering.

ATARI TT, Falcon, ST (with ICD) is required.

Atari CD MASTER will have new drivers added to it periodically, for a nominal fee. Pricing is as follows:

ATARI CD MASTER, complete 4 pack for only ..... 39.95 US$
Upgrade for Audio CD Master(v3) owners ..... 25.00 US$

Upgrades can be done by sending your disk directly to Homa systems House or It's all Relative.

We can also supply you the CDs for $15 for Time Alamanc and UFO. The price of Space missions is not yet known, but will be around the same figure.

As mentioned previously, you can expect more CDs to be added to the list (we are working really fast, there are two more CDs in the works, estimated release time, two weeks)

At Homa Systems House, we are dedicated to bring you quality software and hardware. If you want to be on our mailing list, please send your name and address to one of the following:

Homa Systems House
P.O.BOX 52127
OTTAWA, ON K1N 5S0
CANADA
TEL: (613) 722-0901

FAX: (613) 722-9061

EMAIL:
genie: NIMA
internet: aa414@freenet.carleton.ca

You can expect to see ATARI CD MASTER on your friendly dealer's
shelf, or directly from us.
We accept Visa/MC, or money order, or cheque for methods of payment.
3% surcharge on credit cards.

ADDENDUM,
A NEW DRIVER FOR A CD IS DUE OUT BY THE END OF JUNE, 1995. THE CD IS CALLED
"1995 INTERNATIONAL AUTO ALMANAC". Interactive graphics and text (specs, ...)
about all the 1994/1995 cars.

: sensible?).

The only software version I've ever seen was a cracked one (we have the
hardware proper.) Naturally you would be unable to access true Mac discs
with it. Version 3 sounds reasonable, the latest is 3.1 as far as I know.

But if I was you I would double check that it is not a cracked (illegal)
version before buying it.

Spectre 3.1 should support up to System 7.0, but not 7.1 if I remember
correctly, BTW.

Whatever happened to Gadgets by Small? I had heard a rumor at a meeting a year and a half (maybe two years) ago, that it was no more (unfortunately, it was also my last meeting, so I never got an update). What is the status of his products, does anyone support them?

Todd

P.S. what is the last version of Spectre he released (did he ever get System 7 support...)?

> ---------------------- -//- ------------------------

I spoke to a tech rep from KAO, Canada's largest mfgr of floppies and
he confirmed that there is a different magnetic flux density used by
a HD disk than a DD disk. He said the DD disk drive imparts a higher
flux density but is not a sharply confined as that of the HD drive.
He said that a HD drive can handle a DD disk OK but not the other way
around. He said that there is a great danger of data loss if one uses
a HD disk on a DD drive. He may be right, but I am doing some testing
of my own to confirm this. Unfortunately, I forgot to ask him about
the life expectancy of floppies in general. He also said there was no
significant difference in surface texture between the two types.

5013. Mega 4 and Hard Drives

Newsgroup: comp.sys.atari.st
Date: 1995-06-23 00:00:00 UTC
From: wizzo@connexus.apana.org.au
Message-ID: <3seod0$1ak@studioweb.com>
Source record: 163388

A friend recently purchased an old SH205 (I think that's right) hard drive
for his Mega 4. I was wondering if it was feasible to take the 20Mb
mechanism out of it and put in something larger. If so, what sort
or drive does he need. While I'm here, how easy is it to upgrade
the Mega 4 to 16Mb (if this can be done) as I seem to recall that this
was possible with the Mega 4.

All help, info and experiences greatly appreciated,

Jared

They will, unless they are 60ns - these will cause data dropouts due to the
ST's refresh timing, which is too slow for these fast RAM chips.

We've equipped LOADS of 1040 STE and Mega STE with 3-chip SIMMs, and they all
worked fine (as long as the SIMMs weren't faulty).

: few dollars for users to spend on NEW hardware or software, plus it makes
: the new stuff look very expensive in comparison to the flood of used,
: unless the supplier is essentially giving it away. WithOUT any help
: from piracy this results in a very difficult market to survive in as a
: supplier.

Interesting views... But I don't think, the Atari-market as a whole is
going toward: "buy old and shareware instead of new stuff..". It seems
that the ST-world and the Falcon-world (including MacMagic, Eagle, TT,
etc.) are heading to completely different directions. I've noticed too,
that ST-users tend to use older software, maybe for two reasons: 1) they
don't want to invest in an old computer much, and 2) older "ST-era"
programs simply work much better in STs ! They were hardware-coded (and
don't thus often work on Falcons, etc), and use the capabilities of old
machines perfectly. Just think: how much faster is Lavadraw compared to
let's say: True Paint, or Prism Paint 2 ! New programs are just too
memory- and CPU-consuming, or otherwise too heavy to be used on a 1 MB
STFM, or even Mega 2. Not always, but often enough..

But Falcon-owners, and the others, I feel, are quite willing to update
and upgrade both their soft- and hardware, and ready to pay for that. The
fact that the 68040 accelerator Barracuda for Falcon already has more
than one thousand pre-orders waiting, speaks for itself. There is a
market existing, and the faster C-Lab gets next generation Falcons out,
and GE-Soft their Eagles flying around the world, the market may well
start growing again.

: A market in free fall is NOT a profitable marketplace. The Atari market
: is imploding.

It has been doing that, after Falcon didn't succeed to compete with the
mainstream computers - and the new generation of Atari-compatibles, like
Eagle, Medusa, and... well, Mac 8-) weren't available yet.

But I wouldn't be sure about this decline continuing in the future. Those of us, who were most frustrated, have mostly already changed to Mac or PC (changing to Win 3.x _is_ desperate ;-) - and the rest of us... Well, if and when an affordable 68040-Eagle, or C-Lab Falcon comes available, the whole market very probably starts to live again, with new hope and enthusiasm. Just remember, how many new software titles came out after the Falcon was announced.

Let's face it; new software for Ataris _is_ exciting! We're waiting for our first full-blooded WWW-browsers (several should be ready soon), CD-ROMs are getting more common, programs like Papyrus 4, Apex Media, and many others, are definitely worth buying. And new OSes, like MagiC 3 give us completely new possibilities. 68040-, 68060- and even PPC-computers will soon be reality for us, I believe. There's no reason to be sceptic here; Atari isn't among us anymore. Those guys in Germany, USA, etc. know better what they're doing - and they have the skills. MagiCMac is another thing - and it certainly helps to keep our software developers alive.

Things don't look that bad anymore, I think...

5024. Twist 2 Labels - HOW!!

Newsgroup: comp.sys.atari.st
Date: 1995-06-24 00:00:00 UTC
From: mtaylor@perth.DIALix.oz.au
Message-ID: <3sgo5nhud1@perth.DIALix.oz.au>
Source record: 163303

Hello,

I have just started using Twist 2 database and want to do some mailing labels. I need to print 16 up on my laser printer but cannot format the report to print two across at all. If I put two lots of field information I simply get the second record data identical to the first record and not the logical Record 1 & 2 on line one and then record 3 & 4 on line 2 etc. I have previously used Superbase Pro which made this task very easy. I like Twist better as it is easier to set up and I like the Speedo fonts for screen and output. However I would really like to output some labels so if anyone ahs done this can they please let me know as I would appreciate the help.

All the best
Mark

>was possible with the Mega 4.

Well the SH205 uses MFM drives, these are no longer made..

There is a hack to get 14 megs on a ST or Mega, but you have to use
TOS 2.06 for one thing and it only works for TT compatible software..

NOTE: all custom chips only support the lower 4 megs from what I have read,
its only the CPU that can access this extra ram....

But I could be wrong on this one....

Why not try Mime or UUencoding them on the ST (should take less than three
720 K floppies if you set the lines per segment correctly).

5028. ATARI ST PIRATE WAREZ SITES

Newsgroup: comp.sys.atari.st
Date: 1995-06-24 00:00:00 UTC
From: grubby@erinet.com
Message-ID: <3shc0h$rrc@eri.erinet.com>
Source record: 163307

Can someone please e-mail me some FTP PIRATE WAREZ SITES
for the Atari ST? I know they are out there.

Yes, I realize someone will say this is what hurt the ST in the first place,
but now, at this point, I don't think it really matters.

If I could find a source for stuff for it again, I wouldn't think about
chucking it and getting an IBM. I love the Atari so much more, but face
it, what new games and stuff there are don't show up on shelves anywhere
in the U.S. for it.

I have a lot of great and rare stuff to trade for other, I won't be a
leech. Thanks very much.

5030. WWW on an ST

Newsgroup: comp.sys.atari.st
Date: 1995-06-24 00:00:00 UTC
From: jwoakes@tdc.dircon.co.uk
Message-ID: <3shipn$kru@newsgate.dircon.co.uk>
Source record: 163309

WWW on an ST in the UK.

This might be common knowledge but I only discovered it by accident.

I can access WWW pages in text mode. Images are shown on screen like: [image] . I can tab through the links and 'click' the ones I want to follow. I can save pages and download images and files. The only thing I can not do is use pages that have a graphic (ie map of the world) and you are suppose to click a part of the graphic. The FTP and gopher work as well.

I am accessing WWW pages through a program called Lynx which runs on my internet service provider's Unix machine (The Direct Connection). I use Uniterm to emulate a vt100 terminal to the Unix machine. They have a simple menu system so I don't have to know Unix.

It is quite expensive £20 a month and £7.50 to join but on-line time is unlimited and not charged if you live in London. They have Videotron. They have POP in Bristol (that's me!), Cambridge, Warrington, Birmingham, Edinburgh but you pay 1.5p a minute for that because Pipex lease them the lines. They are NEVER engaged either.

I use them because I will be leaving the country soon and it is a short term solution.

If you want to find out more about them and their service modem to 0181 297 2000 and logon as DEMO. You don't get much of a demo but you get lots of information.

Last but not least FizzDizz doesn't work with Lynx as it doesn't do full vt100. I know because I've tried. I haven't tried any others.

Hope this is of use to someone.

John Woakes.

Just a note on the PAK, I have been unable to operate with mine yet, we believe do to problems with bus speed as I have a rev. H mainboard circa 1985. If you have an older ST, the PAK may not work without the optional buffer board which we hope will allow the PAK to match the standard bus speed on the mainboard...

5034. TCACHE SETTINGS WITH 4MB?

Newsgroup: comp.sys.atari.st
Date: 1995-06-24 00:00:00 UTC
From: kevan@empyr.dircon.co.uk
Message-ID: <06241995.065912@empyr.dircon.co.uk>
Source record: 163313

Hi, I have now finally upgraded my ST to 4Mb, and I'm running TCACHE63 in my auto folder. This cache is supposed to be the fastest around, but it is bloody complex to configure.

Can anyone recommend some settings for me to get the fastest disk performance please ?

My Auto folder currently has :

NVDI 2.5 (I have 3.01, but uninstalled it as it used to take too much memory, but I will now re-install it)
PINHEAD
SILKMOUSE
POOLFIX4
SELECTRIC
TCACHE63
XBOOT

(Obviously not in order of execution !)

My ACCS are only:

STGUIDE and XCONTROL

I normally run TERADESK 1.40 as the replacement desktop and my usage consists mostly of writing e-mail !

Does anyone know how to configure TCACHE to run fast ?

BTW, I'm running ICDPRO software on my 105Mb SCSI drive, with all ICD cacheing, TOS buffers and extra folders set to zero.

Thanks in advance,

Kev.

> external hard drive(s)....
>

That's what I've got, an external Syquest/ST296N combination with
an AdSCSI+ host adapter. I've also tried it with two other external
drives and got exactly the same results. The internal drive works fine,
but it won't recognize external drives. The ICD booter reports the
correct SCSI ID's for the external drvies, but says "Unrecognized unit"
for them. I've verfied that the internal SCSI controller is the source
of the problem by swapping it out with another Mega STe.

5039. [Q] Where can I find ST-Guide Hypertext files?

Newsgroup: comp.sys.atari.st
Date: 1995-06-24 00:00:00 UTC
From: mbecroft@iconz.co.nz
Message-ID: <3sfndo$58q@status.gen.nz>
Source record: 163318

I have recently discovered an excellent looking application called ST-Guide.

I would like to know what FTP site I should look at to find Hypertext files to use with ST-Guide.

In particular, I remember seeing a posting here some time ago regarding a ST-Guide Hypertext for POV. I have since lost the posting, so could anybody repeat the address and path for it?

I would also like to know where I can find just any ST-Guide Hypertext file to look at and see all the different tricks people use to make them.

Thankyou for any help!

: Any suggestions and maybe FTP sites?

There was a game called Coyote Poker, but it only runs in ST High
Resolution, and I just checked on atari.archives and it isn't there.
They did have a file named sz_poker.zoo and one named vpoker.lzh, but I
didn't dowload them to see what they were. They are in ftp:

atari.archive.umich.edu/atari/Games/Cards

No its more like the supid twits that let the Yanks brow beet them,
no we stoped them sending there Nuk ships here and took there beloved
Americas Cup from them....

New Zealand the holders of the Americas Cup, yes little New Zealand trashed
the Yanks with a outright win.......

>Yeh, right. Just because someone put it on a BBS makes it legit to place it
>on an ftp site??? Oh... I forgot. This is the 'expert' speaking. :) I thought
>maybe it was time to take good ol' Roger out of my kill file. Obviously, that
>notion is a bit premature.

How come that its in some PD catalogues

>My only question is... why would anyone WANT it in the first place? It must
>be hideously slow considering how dog slow their software only emulators are
>on a fast 040 or PowerMac. On a 16MHz 030 it must be -very- painful.

I needed to pass on the latest Diamond Steath drivers to a friends PC, he does
not have a modem and access to Internet, and the PKZIP supports multible
disks, not like the Atari version..

What other ways can a pass on a 1.22 meg PC Zipp file using 720k disks...

I have tried PC-Ditto but it does not like my HD set up....

A small note: New Zealand is the bigest pirating country out side Asia,
and high software costs are the reason for this, schools are one of the worse..

Margins are one of the big reasons, most PC software that is imported privatly
will not be supported here, unless you pay big $$$$, some software was
confiscated by customs under copyright laws, WordPerfect come to mind...

Some one posted a good article in a news paper here and stated who were the
Pirates, he quoted PC software prices here and in the USA, some NZ prices were

5-6 times the USA $$$...

One that overcharges is also a Pirate...!!!!!

As I say Hutch look before you leep, may be you will not like what I post here
but these are facts of life, take a pill and get on with life, life is to
short to worry about this all the time, do you ever sleep..???

There are some shareware electronics design programs, CLA, PCB and PLATIN
but these and others I have looked at do NOT contain the facility to route
connections - this has to be done manually.

If anyone knows anything different I, to, would be glad to know.

JT> And where can I get them in the UK?
```

If you just want to plug and go then you should get the Marpet Xtra RAM board which takes normal SIMMs. Most places have them - Compo, for instance. You will pay about £100 to get up to 4Mb or can do it in two stages i) to 2.5 ii) to 4.

If you have some electronics experience there is a cheaper way described in principle by Barry Orlando (you should find the text on most BBS). It involves removing the two banks of 256Mbit chips from the motherboard and replacing with 1Mbit chips (you can find them second-hand for about £2 each) using some "doctored" chip sockets.

AFAIK you must have a modem which is capable of Fax working. A normal "DATA only" modem won't work. What sort of modem have you? Does it say it is a FAx modem?

TO> Is there any software out there that
TO> will let me do that? PD or shareware with source is preferable, so

Coma or Junior Office are widely available and both shareware. They do not come as source, though.

JK> Will it work in GEM-only or do i have to run MiNT, like with Chimera
JK> ?
JK> A GEM WWW-browser to the people, NOW!

I of course agree but as a relative newboy to the net ,having previously been accessing here through an FTN gateway ,I am amazing at the general poor quality of the more basic utilitys as far as GEM is concerned ,i.e Mailer shells , Message editors etc. Oasis is the only one that I have come across and to be a bit frank at the moment it is not very usable at all on my Falcon , problems with Window sizing ,scrolling , mouse dropping , AES Function errors and screen redraws in general. Anyone who has seen the equiv software available in FTN networks i.e Semper.jetmail.LED must feel pretty much the same as me I would have thought.

So GEM Web Browsing would be nice (and I have to say that HTML is a truely brilliant stable program with a clean GEM implimentation) but what about sorting out some of the more basic things (TCP/IP shell,i.e need magic3 or MinTnet for this I guess ,and msg editor!!) first !!!

Maybe you have a large cache in your hd-driver or your minixfs driver. I also
ran out of memory when I tested chimera a while back, but didn't realise that
those caches might be the problem.

Regards, Christer.

I have received the chimera disks from TAF and installed them.
The PPP connection seems to work fine (ping is fast and telnet
and ftp work). However when I try to run chimera after
connecting with pppd, I get an out of memory report.
This is extremely suprising, as I have 4 MB and nothing installed
except MiNT/X11/pppd. Has anyone else ran out of RAM in this
type of situation?

Perhaps this is related to my having a 80MB minix partition
instead of 10MB. Does the minix driver store drive information
in RAM?

Any help would be appreciated.

]
] But... I believe, Atari's ARJ 995 supports multiple disks =-) ! The
] specs look pretty impressive otherwise, too.

True, that'd probably be the most efficient way of doing things, ARJ has
compression almost as good as lh5 and has archive-splitting capability,
which is fully compatible with the MS-DOS version of ARJ.

5067. SIMMs for STe

Newsgroup: comp.sys.atari.st
Date: 1995-06-25 00:00:00 UTC
From: wells_s@kosmos.wcc.govt.nz
Message-ID: <3skgis$m25@golem.wcc.govt.nz>
Source record: 163257

What type of SIMMs can I use on my STe, and if necessary, how do I need to modify them? I know I need 1meg, 30 pin SIMMs. But can I use Mac/PC SIMMs straight out of the box, or if not, do I have to do something to the 9th bit (??). I can get 1meg PC SIMMs for next to nothing, so this would be good.

5069. PC Ditto help!

Newsgroup: comp.sys.atari.st
Date: 1995-06-25 00:00:00 UTC
From: et94drw@exeter.ac.uk
Message-ID: <DAr6Dx.DEy@exeter.ac.uk>
Source record: 163259

Hi there guys and gals.

Please provide me with any help you can give on this little
teaser....

I bought PC Ditto off a guy over the internet. However I am in
UK, he was in US. The version of PC Ditto was therefore a US
version, and when I try to run the program, I get the following
error message....

"This is a US version of PC Ditto, and therefore will not run
on your UK machine. Please see your dealer for assistance...."

Is there a patch program I can use to fool my ST into thinking
its a US machine or a patch to fool PC Ditto into thinking its
running on a US machine. If so, where can I get it from? If its
a PD/Shareware program then please e-mail it to me!

Cheers,

Dave.

5073. NETCRUISER type program for the 1040 ste?

Newsgroup: comp.sys.atari.st
Date: 1995-06-25 00:00:00 UTC
From: cherridge@delphi.com
Message-ID: <5k9d+ng.cherridge@delphi.com>
Source record: 163263

Is there a Net cruiser type program for the 1040 ste online someplace?

I currently use a Supra Max 14.4 modem and would like to cruise the WWW
and receive the pictures on the SSS net like some do with their PC's and
Mac's. Is there a Net Cruiser program, that uses a mouse available.

If so, where can it be found, or can it be emailed to me.

Connor
Cherridge@delphi.com

5074. The old Populous Game for the 1040 ste

Newsgroup: comp.sys.atari.st
Date: 1995-06-25 00:00:00 UTC
From: cherridge@delphi.com
Message-ID: <xk2dmfr.cherridge@delphi.com>
Source record: 163264

I used to have a game called Populous which I often played on my old 1040 st-f computer. I gave this computer to relatives when I got the new 1040 st-e. The game wouldn't play on the the STE and it's not make anymore.

I really enjoyed this game and would like to play it again, but on my STE computer. Does anyone know where I could get a copy of this game that plays on the 1040 STE.

Thanks
Connor

5076. Re: What is Atari Medusa?

Newsgroup: comp.sys.atari.st
Date: 1995-06-25 00:00:00 UTC
From: Thorsten_Floeck@rs.maus.de
Message-ID: <199506251140.a47432@rs.maus.de>
Source record: 163266

Hallo Henrik Lunardi,

HLW>Both the Medusa T40 & T60 and The EAGLE 030 & 040 are Atari ST/TT
HLW>compatible clones.

Both T60 and EAGLE 040 doesn't realy exist in the moment! The T60 exists as a development machine by Fredi Aschwanden, but he have no correctly working 68060 processor. Motorola is not in the position to send an up-to-date 68060 processor to Mr. Aschwanden :-(
GE-Soft, the producer of the EAGLE, announces the 040th Eagle, but until now, you get the 030 Eagle. It seems, they are still working for the adaption of the TOS to the 040 processor.

HLW>The Medusa T40 (32/64 Mhz 68040) is quite exspensive - about 2500 UkP
HLW>with 8 MB Ram and a ET4000 type graphics card. Don't know the price
HLW>of the T60.

The price for the T40 goes down and the price for the T60 will be at the region of the T40 of last month.

HLW>And it's at least as fast as the Medusa T40.

In principle not! Look at the different design of the memory and you can easily see, that the Medusa is faster than the EAGLE! The Medusa is a quite stable system for over 2 years now and the the EAGLE 040 is still vapourware!

HLW>The EAGLE can also handle PPC 601 & 603 and Alpha RISC CPU types.

Really? It's announced, but nobody has seen any adaption! And which operating system you will use on an EAGLE with a PPC or RISC?

Thorsten

5078. FOR SALE: Programming Items

Newsgroup: comp.sys.atari.st
Date: 1995-06-25 00:00:00 UTC
From: ducky@enterprise.america.com
Message-ID: <3skq67$jlt@enterprise.america.com>
Source record: 163268

I have been cleaning up my cleaning up my computer room and
have come upon several items which I no longer need. All of the items
are in excellent condition and will be useful to anyone wanting to
learn how to program Atari computers, and also to those intermediate
programmers looking for references.

Lattice C 5.6 - This is what I consider the finest C programming
package for the Atari line. This version includes
three excellent manuals covering all aspects of C
programming on your Atari and also includes 'Modern
Atari System Software' which has many sections
pertaining to the Falcon. This set retails for
$289.95.... Oregon Research sells it for $189.95...
and it can be your from me for $95.00 .

The Atari Compendium - This huge book is the most comprehensive
reference guide to the Atari computers.
Retails for $49.95... I'm letting you have it
for $38.00 .

C-Manship Complete - This is Clay Walnum's compilation of his
famous programming series from Analog and
ST-Log magazines. It is extremely useful to
the aspiring Atari programmer. Includes disk
with programs. Only $18.00 .

Atari ST Internals - A wonderful out-of-print refernce book to the
Atari computers. Does not include Falcon
information since it was printed long before
that line. This is the third revision and
includes sections on all of the integrated
circuits, interfaces, and the operating
system. Yours for only $27.00 .

V.D.I./A.E.S. quick reference books - This is a set of two
reference books, over 200 pages in all, which
summarize each V.D.I. and A.E.S. function.
Extremely useful to the C and Assembly Language
programmer. Both yours for $20.00 .

Compute's Technical Reference Guide to the Atari ST (Volume 1) - A
wonderful guide for the budding Atari
programmer...includes many examples for
programming the V.D.I. This is another
out-of-print book so grab it before it's
gone...only $18.00 .

Learning C: Programming Graphics on the Amiga and Atari ST -
Another useful book for beginning programmerrs
with numerous examples for programming simple
graphics routines. $15.00 .

Atari TOS Developer's Kit - This is THE item to have for all
SERIOUS programmers. Includes 2 notebooks full
of documentation and enough loose addendum to
fill another 1 and a half notebooks. Also
includes software such as the MADMAC assembler
and resource construction set. Get it before
it's history at only $95.00 .

**** Shipping is included for any pre-paid order inside of the
continental United States. C.O.D. orders will be charged added
UPS C.O.D. fee. Orders from other countries will be figured on an
individual basis. Discounts may be given to those who buy multiple
items.

Phil Yeadon (phil@yeadontt.demon.co.uk) wrote:
:
: Can anyone help me, I have just fitted a High Density floppy to my TT,

AFAIK you flip switch 7. The DIP switch is under the Hard Drive near the front of the computer. I have been told that the early Motherboards don't have the necessary AJAX chip for High Density, but that can be remedied (check with System Solutions (ssolutions@cix.compulink.co.uk) - they should know all there is to know. So just put in the HD Drive flip switch 7 and that should be all there is to it. (It was on my friends TT030) BTW cheers to another TT030 Owner ;-)

HTH, KIT (Hope this helps, keep in touch!)

That wouldn't work, would it? As I understand it, most desk accessories are inactive unless selected. The few which perform some function in the background (printer spoolers, disk formatters, module players) have to be fairly economical in their use of memory and especially processor time, which surely rules out NOS and its multi-tasking kernel.

: Last but not least FizzDizz doesn't work with Lynx as it doesn't
: do full vt100. I know because I've tried. I haven't tried any
: others.

BULLSHIT!!! I can view my web page using Freeze Dried no problems.

I just think you have no experience in setting it up. It does not have VT100 that is true, BUT.....i've configured my site to run under vt100 emulation and for most things FREEZE DRIED works. The only things that FZDT has problems with in VT100/101/102 emulation is, talk, ytalk, and IRC. To solve these problems is quite easy, change your emulation (under UNIX) to ANSI, set term=ansi (for csh/tcsh), I have no problems whatsover following these method's. I have been on 7 different net sites (I have 4 separate accounts) and have had NO problems with FZDT whatsoever.

Try it, you might be surprised

Well, unless there is an error in the Toad cataogue, 3.1 supports System 7.0. You can check with Toad, email toad@charm.net.

Never heard of this problem before, Populous is a fave game of mine, I had an early copy which got destroyed, then I bought it again with Sim City, both copies worked fine, the second copy still is on my 1040 STE !

Give us a hint what it's doing I might be able to help.
Ade.

Yes there is. Unfortunately I've got no idea where to get it from! :(
I think basicly all PD libraries will have a screen emulators disk...

Manfred Ssykor gave this info a couple of days ago:

Search here for HYPertextfiles:

ftp.uni-regensburg.de:
pub/freeware/software/atari/hypertxt/st-guide/

And specially:

ftp.uni-regensburg.de:
pub/freeware/software/atari/hypertxt/st-guide/hyps.ger/misc/aiphyp??.zip
For this file you MUST have the actually Version of ST-Guide... Look at
ftp.uni-regensburg.de too for this... Last German is Rel 13a of 28.4.95

(the paths there are not up-to-date, go to pub/freeware/software/atari
and continue from there).
That german prg is worth getting, it's the only one that can open BIG
hypertexts. You can take the english package, and just replace the
program file, so you'll have english docs and helpfiles.

The files you need are:
STG13E.ZIP (latest english version "28.4.-95")
STG13A_G.ZIP (bugfixed prg-file for STG13E.ZIP)

From: The only truth in life is Pain <chrishinds@delphi.com>
Message-ID: <Z848G51.chrishinds@delphi.com>
Source record: 163205

A few months ago I saw an announcement for something from Lexicor called DA Render Kit, which was supposed to be a package of utilities for playing back and making movies/animations, (I remember it supported .MOV and MPEG, among others).

Since then I haven't heard anything about it and its not in the new Toad catalog. Is it still available? If anyone has it, what do you think of it?

Thanks

I have a stock 520ST for sale. Includes keyboard/cpu, monitor (mono), and floppy drive + power adapters, etc. I want to sell all at once, rather than splitting up the items. Make me an offer I can't refuse! You pay shipping and any COD charges if applicable.

Send email to jbresler@best.com for more info.

Thanks.

Yeah, just remember that the Falcon,TT,Eagle and others AREN'T ST's !!!
They are just ST-kompatible (in some terms of course).
Which doesn't mean that they have to bite the dust, just because the old
ST does.

And by the way, there still A LOT of commercial serious software coming out
for the Atari-kompatibles, it's just that most programs are made to run on
better Atari's than the ST.

Keep Cool and Flying...

I haven't used Word, but I have used Lotus AmiPro under Windows 3.11.
I also have a full version of Papyrus. In my opinion, Papyrus compares well.
Although AmiPro has more features, they are the kind of features that you don't
use too often anyway, so you won't miss them unless you are a "power user". I
find Papyrus perfectly adequate for my use (mainly writing articles).

>
>Best of luck!
>

Thanks for the info, but since posting I have finished the job!

I had to use a full size tower and remove the side of two of the 5 1/4
drive bays.

The reason I decided to do this (if anyone is interested) was because my
TT power supply failed (a replacement would have cost 99 pounds), and I had been
considering a Lightening Tower case for a while. Having seen the quality of this
particular case I decided to get a PC Tower. It was cheaper that a Lightening
and a TT power supply, the power supply in the tower case had a lot more spare
capacity, and it would reduce the clutter and spaghetti in general.

I completely removed the PC mounting plate and made four stiffeners that
I fastened the motherboard to using non conducting nylon bolts and spacers. As
for the connectors. I have mounted the MB so that the cart port is at the bottom
and the connectors are at the back of the case.

I used IDC ribbon cable and made up leads from the MB to the rear of
the tower case. I didn't use IDC connectors, I sweated over a hot soldering
iron. I have made leads for the monitor, printer, keyboard and external audio.
I also mounted my modem in the top 5 1/4 drive bay, this works quite
well, with the power pack run from the main PSU (mains connector fitted inside
the PSU box), I fitted the LED cover and an on/off switch to the drive bay front
panel. I connected the modem to Serial 2 via the 10 way IDC connector straight
to a 25 way D-Plug.
The only direct connection I have made to the MB is the front mounted
reset switch, I used the turbo button to switch the internal speaker on/off.

Future plans include working out which keyboard wire to run through the
keylock switch, and connecting the rest of the ports to the rear of the case.

If any body wants advice, or help please feel free to get in touch.

The reason I decided to do this (if anyone is interested) was because my
TT power supply failed (a replacement would have cost 99 pounds), and I had been
considering a Lightening Tower case for a while. Having seen the quality of this
particular case I decided to get a PC Tower. It was cheaper that a Lightening
and a TT power supply, the power supply in the tower case had a lot more spare
capacity, and it would reduce the clutter and spaghetti in general.

From: rldetlefsen@delphi.com
Message-ID: <pu3eeT6.rldetlefsen@delphi.com>
Source record: 163212

JUNE 1995:this is a effort to list all known active Atari users Groups and BBSes. The last list was around Oct 1993, and includes info mostly from Atari User and Atari Classics magazines. Is assumed to be out of date. Please fill out and return via email or regular mail. Also, pass this around as we need as much information as possible. Save a copy for future changes.
SOAPBOX:The Atari market and active User base is shrinking. Many people are isolated, many have been lost. The available users must support the User Groups, BBSes, Vendors, Magazines, and Online Services to the fullest extent possible. Compuserve, Genie, and Delphi all have weekly conferences at the lowest prices ever. We must let people know support is still available. Only in doing this will Atari support and the enduser survive.

The results of this survey will be posted to online services as a list and possibly as a file for importing into databases. Updates will be posted as needed. Please include 8 bit, ST/TT/Falcon, Games systems, Lynx, Jaguar, Portfolio, etc.

As the author of CLA, I think I an add to this. CLA version 3 now has an
Auto-router built into the schematic capture program. I know that this isn't
what the guy is looking for, but the routine is the same - to produce
a fairly simple board router from that would be simple, but very few
people have asked for it, so I haven't attempted it to date.

[passing note, the auto router uses a directed Lee's algorithm, and is not
in the same league as the simulated anealling and genetics based algorithms
used by the big boys...]

[second note, CLAv3 is still being developed but has been beta tested on a
variety of systems from a 512K ST (640x400 mono), right up to a 7100/80
PowerMAC (1024x768x256) using MagiCMac. It will get released eventually :)]

Craig.

There's been a change in practice with the version numbering system, Steve,
I have been trying to suss it out and have discovered that there was an
English release around the end of April which may have the FREQ name
GTGUI4E. or STGU14E. or even STGUI3E. I guess we will have to wait for
another release before it's all sorted out.

Do you have access to FAN sites? It was released there about a month ago
-whole package, I'm afraid.

After seeing your announcement about the TAF Chimera/Mint Web Browser, I sent of a money order for $25 as requested. Last week the files were on Genie-FOR FREE! Can you please tell me if the disks are now PD? Either they were an unauthorized upload, or if they are now PD, I think that I deserve an explanation as to why I shouldn't receive a refund. BTW-still waiting for the disks. This isn't meant as a flame-just want to find out what is going on.

M > I would also like to know where I can find just any ST-Guide
M > Hypertext file to look at and see all the different tricks
M > people use to make them.

If you want a good idea of what you can do with ST-Guide, first I suggest paying the fairware fee on it. Not only will it get you registered and get you an official disk copy of it (and in the process assure Holger Weets there's enough interest out there to continue development), it also includes a number of .HYP files, including two by Joe Conner, the program's UK registrar - one a tutorial, the other Conner's catalogue of what he handles for registration, both of which gives you a good idea what's possible.

I'll also (although a little hesitantly, as I'm a little shy about tooting my own horn) suggest trying to find the file GLOSARY4.ZIP - it contains my conversions of Howard Carson's ATARI GLOSSARY and GIANT COMPUTER GLOSSARY to .HYP format. Howard decided recently to put out both of these as freeware, and if anything are both highly informative and fun to read. I just happened to make it a bit easier to get around in (the GCC is HUGE!) and have included a number of illustrations along with it. I'm currently weighing out what I'm going to do next with it, as soon as I can find some more time.....

G > Can someone please e-mail me some FTP PIRATE WAREZ SITES for
G > the Atari ST? I know they are out there. Yes, I realize
G > someone will say this is what hurt the ST in the first place,
G > but now, at this point, I don't think it really matters.

OH YES IT DOES!

Regardless of what you think, there are software companies that STILL support the Atari line - companies like Gribnif, DMC, EMagic, Steinberg, ABC Solutions, the company that does MagiC, Ease, NVDI, etc. And piracy at this point is going to be even MORE hurtful to them in the shrunken market. And I (and quite a few people here) would prefer to make sure we have the support and further development we need to make out machines viable - development that leeches like you would only destroy due to your own selfishness and disregard for others.

G > If I could find a source for stuff for it again, I wouldn't
G > think about chucking it and getting an IBM. I love the Atari
G > so much more, but face it, what new games and stuff there are
G > don't show up on shelves anywhere in the U.S. for it.

What a pathetic, sad excuse. Ever hear of Toad Computers? STeve's? Systems For Tomorrow? It's All Relative? Scarborough Computers? Computer Direct? These are stores that handle lots of ST software in North America - including new titles - and be easily had by mail order. Are you THAT lazy that you can't simply phone Toad and ask if they have what you want in stock? Toad is known for their fast shipping and prompt turnaround, so don't use "it'll take too long to get here" as an excuse. Or is it you're too CHEAP, Mr. Thief?

I have this feeling that your computer will explode from all the flames you're gonna get - especially from the developers on this conference - and I can't think of a more deserving idiot it could happen to at this moment.

G > I have a lot of great and rare stuff to trade for other, I
G > won't be a leech.

On the contrary, by posting this you've only proven how much of a leech you are. Get lost.

Source record: 163223

M > Organization: Dept. of Electronics, KTH
M > Hi,
M > Are there simm memorys or "ordinary" memorys in an STf?

Ordinary memory, Hmmm... I've never heard of this type before.

There are generally three types of RAM. DRAM, SIP, and SIMM. SIMM of course being the most widely used these days.

The STf however uses DRAMS for it's memory. The addition of a RAM upgrade

kit can allow one to use SIMMs, usually up to 4 meg, in the older ST's.

I've used unformatted HD disks for years as 720K Atari disks. I've never had
a problem with data corruption.

The real trouble I get is when I try to use a pre-formatted HD disk. If
I try and re-format the HD disk down to 720K, then I get all sorts of
problems. Unfortunately there aren't disks being sold in an unformated state
anymore.

I agree to believe you, about possibilities of Spectre 3.1

But, in France, we never saw Spectre 3.1. We heard about the new Spectre,
about Spectre for Falcon, about hard problems of Dave Small, about Gadget
of Small decease, but we never saw Spectre 3.1.

I write in the french magazine STMAG for two years, and I think I'm
informed of the release of software. And I can tell you that, in France,
we were waitin' for Spectre 3.1. Each month we thought it was comin', but
at last we never had it.

So, my question is : OK, TOAD catalog gives the functions of Spectre 3.1,
but are you sure that Spectre 3.1 exists ?

Everybody has heard of it, but who saw it ? Who can affirm he uses it ? Is
it possible that in France, even in Europe (even in Germany, which is an
Atari world in the Atari world), nobody uses Spectre 3.1 if it exists ?

Yes just get your money back...

Thier are many many USA programs that have problems with UK machines,
some will not run at all like Calamus....

The only thing that you could posibly try is set the Machine to 60hz...

The UK version of PC ditto was supported longer than the USA one,
I think it went to 3.96 and the USA one to 3.01.....

>Perhaps this is related to my having a 80MB minix partition
>instead of 10MB. Does the minix driver store drive information
>in RAM?
>
Are you conencting with the option on the menu? ie. Don't run an xterm
or anything right from boot up - connected with the menu option and wait
for the ppp to kick in - then choose chimera from the menu - if you
have run a shell/xterm(or xvt) in a session you probably have some fragmented
memory - it is best to run chimera from a 'clean' system.

I have 12 meg so I haven't run out of memeory - I don't think the
minix parition size has anything to do with it - it has a cache size
built into the driver which I set very small before making the TAF disks.

Hope this helps,
Sam
PS. If you have a remotwer host that can run X netscape or Xmosaic, you can
use this and set the DISPLAY variable to your atari's ppp assigned address
and this will require almost no extra RAM. This is the preferred way to
do things - nowadays I run Netscape remotely and it is much faster
and better than Chimera.

It's somewhere between TOS 2.5 and MTOS (almost MTOS compatible). the desktop
EASE is better than ATARI's Newdesk.

It runs with 2, 16 or 256 colours as far as I know.

Sure?
I think that I was the one who uploaded it there and that I did upload the
German demo version.

The english demo can be found on various info-mac sizes. Here's a small list:

bunsen.hrz.uni-marburg.de /mirror3/info-mac/app/magic-mac-121-demo.hqx
ftp.sunet.se /pub/mac/info-mac/app/magic-mac-121-demo.hqx
ftp.univie.ac.at /systems/mac/info-mac/app/magic-mac-121-demo.hqx

You may also use archie to search for "magic-mac" (which should habe been
named "magicmac", BTW)

The english retail version of MM is available at System Solutions, London,
Tel +44 (0) 1816933355, Fax +44 1816936936

Perhaps because THE ST IS DEAD. How many games have been released in the last year for the ST? One? Maybe even as many as five!!

How about commercial products? How many? Maybe as many as 10!! The ST is surely thriving...

Personaly I dont think having the old games available from FTP sites would hurt the ST. It would probably increase peoples interest for nostalgas sake.

Unfortunately it is completely ILLEGAL and therefore it wont happen for some time yet... Look at the c64, Spectrum and Amstrad CPC, all games for these machines are available from FTP and this is still illegal. Companies just dont care when it's a machine which isnt making money for them!

I think the ST may have a year left in it maximum before it finaly bites the dust... :(

Nope.....Why???

The hardware is much too different. Although some emulation could be done via the DSP chip, but not much. Why not get a cheap A500 and expand it? I've seen them go for as little as $75.

Whats the problem with having ST 'WAREZ' FTP sites if the machine is 'yesterday' and no-one uses it?

> The only losers are those people who desperately stick to their STs, and
> (believing some propaganda?) never realize, that FALCON is everything
> they really need. And if not Falcon, there are still alternatives.

Most people have ST's becuase that was their machine before they bought their shiny new PC. I have an ST simply because I baught one about 6 years ago and have great memories of the machine and would like to replay some of the old games!

> Yes, I know, that there are lots of ST-owners who wouldn't touch a Falcon
> with a long stick, after hearing how bad the bird is... So, they cry some
> tears for their STs and STEs, and finally force themselves to put their

I'd like a Falcon... I wouldnt pay the current going price for one though considering the user base and market support.. :(

> Right now, Falcon is the most fun Atari-compatible available. Eagle,
> Medusa and MagiCMac are excellent choices for people who need raw power
> more than fun and versatility.

I agree, but the topic was 'ATARI ST PIRATE WAREZ SITES' not 'I LOVE MY STE AND THINK ITS BETTER THAN THE FALCON'...

> To every desperate ST-user there, worrying about the dying computer
> platform, I want to say: ST isn't the future of Atari computing. I owned

Surely the point of these 'WAREZ' sites is to got old games you have fun memories of, isnt it? Thats what I thought It was... I didnt think poeple were SERIOUS about getting new games!!!

> Falcons (and possibly Amigas) are what computing should be: computers you
> love to use. What else can we want? Software? There's plenty of that

Machines you love to *program* perhaps. The PC is a joy to use with Windows but the assembly is... basicly.. cack... :(
68K machines are lovely... ;)

> available. Hardware? Need CD-ROMs, scanners, etc.? They're available.

At twice the price of the PC...

Yes, your right. I should have added that! :) Also some programmers are
giving away the source to their old games with emulators!! I heard that
Stormlord (the base CPC game ever?) and source code is to be given away
with an Amstrad CPC emulator! ;)

Why should we care? ST is yesterday, other Atari-compatibles are here
with us. More power, more possibilities. ST has done more than its share;
few computers have survived 10 years, still remaining useful!

The only losers are those people who desperately stick to their STs, and
(believing some propaganda?) never realize, that FALCON is everything
they really need. And if not Falcon, there are still alternatives.

Yes, I know, that there are lots of ST-owners who wouldn't touch a Falcon
with a long stick, after hearing how bad the bird is... So, they cry some
tears for their STs and STEs, and finally force themselves to put their
hands into shit: some other platform ;-).

Right now, Falcon is the most fun Atari-compatible available. Eagle,
Medusa and MagiCMac are excellent choices for people who need raw power
more than fun and versatility.

To every desperate ST-user there, worrying about the dying computer
platform, I want to say: ST isn't the future of Atari computing. I owned
two STs, loved them - and finally purchased myself a Falcon. And
surprise: I haven't regretted that decision one single second =-) !
Falcons (and possibly Amigas) are what computing should be: computers you
love to use. What else can we want? Software? There's plenty of that
available. Hardware? Need CD-ROMs, scanners, etc.? They're available.
A PC-owner may look at you wondering: "what kind of a poor fool chooses
something like that instead of a Pentium?". But who cares? Because he
never gets to know, how fun computing can be...

Tommi (waiting for C-Lab Falcon-040..)

Don't know about you others - but for me, having to use Windows-PCs and
Macs quite often, really makes me appreciate our own choice.

Last rumours I had stated that the engineers working on the new PureC had
numerous problems and the expected release date finally was in 1996.

Nothing official, of course.

From: gs01tph@panther.Gsu.EDU
Message-ID: <3so367$3mn@sphinx.Gsu.EDU>
Source record: 163165

Sorry, but I couldn't resist... This is my personal TOP 10 instead of 5 :-)
I included SW-programs here, too..

1. Selectric 1.10 file selector - simply brilliant...

2. All archivers: LHA 3.10, Zip 2.6, ARJ 995

3. PFXpak 3.2 - active program compression utility, works great.
Actually, makes packing whole hard disk with prgs
like PC's Stacker nearly useless. Make always
backups, though... Some programs don't like PFX.

4. NetHack 3.13 GEM - THE game of games... Requires loads of CPU
power, a fast hard disk, at least 4 MB of RAM,
VGA color graphics, and.. and..... BUT it's
worth it =-) ! I only hope that the author
could find time to re-develope this in the
future... Some bugs are there still, also.

5. No-Idle A small utility I wrote myself ;-)... My 420 MB
Seagate IDE-drive had a bad habit of going to
sleep automatically after some time unused. This
really wasn't nice at all! Especially, since you
could not switch this "feature" off. No-Idle simply
re-programs hard drive's internal timer not to do
anything foolish when connected to Falcon..

6. GemView I don't like the user-interface, but this program does
more than 10 Microsoft programmers could do in 10
years =-). When will GV support vector graphics,
though... WPG, Corel Draw, CVG, EPS..?

7. Kandinsky A nice vector graphics program.

8. Silkmouse 3.2 Does miracles to your mouse!

9. Speed-of-Light A very nice GIF/JPG viewer/processing utility.

10. HSmod06 I guess, you need this with fast modems...

Cheers,
TH

5164. Re: DA Render Kit??

>it?
>
>Thanks
>--chris

I spoke to Lexicor a while back and was told the animation utilities
were included in any of the DA'S packages. So I purchased DA'S Vector
and guess what. No players. I really wanted the GIF to FLI converter
that was suppose to be included. Then again, the complete package,aside
from the manual, is in German and mabey I have overlooked something.

Anyone know if it possible to hack up the ST keyboard and attatch a PC keyboard in it's place?

The reason I ask Is I have a spare PC case and keyboard which would make a nice ST box... :)

Any ideas?

Well, not all PD - some shareware here as well (any authors who haven't recieved registrations for programs mentioned, don't worry - I've just got a proper job paying major wad so I can afford to pay RSN).

1) Thing - Essential PD desktop. The latest version with tab'd dialogs and Group icons is amazing. Better than gemini in almost every respect (apart from the console window not being as good).
2) ST-Guide - Mr Weets' wonderful hypertext viewer.
3) FalconScreen - the most compatible screen expander for the falcon (even works with X11R5).
4) WinX 2.3beta - Wonderful....cann't wait for MiNA to hit the streets.
5) Fsearch - Fantastic (and simple to use) file finder & grep accessory.

There, who's next ?

Craig.

Hi, I'm selling the following on behalf of a friend:

Atari Mega 2 ST
SC1224 Monitor
Atari keyboard and mouse

They computer has been lightly used for 4 years and he is the original owner.
All manuals are included as well as the original software that shipped with
the ST. Price: $250, Canadian Dollars.

He prefers to sell to someone in either the Toronto on Montreal area, but will
entertain any offers. Buy pays shipping if necessary.

Thanks!

-Alan

Indeed I am. :-) Fansi is sort of hold at the moment. I've been doing
a great deal of experimenting and learning in GFA this past while so I'm
writing a couple of smallish (well, code-wise) games to explore these new
found tricks ... I've still got plans for Fansi, but I'd like to put
these new things I've discoverd to some good use. I suppose I could add
them to Fansi, but they'd serve to practical purpose and would just make
the program a lot bigger. :-) Actually, these experiments have had an
impact on Fansi, as I now know how to speed up drawing routines by at
least 10 times. :-)

5176. Atari St Pirate Warez

Newsgroup: comp.sys.atari.st
Date: 1995-06-27 00:00:00 UTC
From: Doug.Byfield@miramax.yonet.org
Message-ID: <ab7_9506272100@miramax.yonet.org>
Source record: 163178

TP> ...few computers have survived 10 years, still remaining useful!

Let's see, what would a ten year old PC Clone be-an XT? Anyone want to try doing MIDI on that? :-)

TP> The only losers are those people who desperately stick to their
TP> STs, and (believing some propaganda?) never realize, that FALCON is everything they really need.

And in some respects, it is exactly these ST huggers being too cheap to upgrade to a Falcon that caused Atari to stop making computers. The price never comes down if no one buys the product!

Atari doesn't advertise-we all know that. So who knows about the Falcon? ST users, of course. If they don't buy a Falcon, who else is there? Not many. The standard arguement is that the Falcon is too expensive. As far as I am concerned, any consumer item selling for over $0.02 is too expensive. BUT I wanted the Falcon for what it can do, so I saved and got one. Simple as that. I'm hardly wealthy, and I realize that some are simply not able to afford to upgrade, but c'mon now! Even a cheap PC Clone is going to cost them 1/2 to 3/4 of what a Falcon costs-and that's for the hardware! Also, users seldom consider the high cost of replacing the software when they change computer platforms. (Personnaly, if I was to replace just my major commercial software-Clarity Falcon, Edittracks, Lattice C, Calamus SL, True Image, DA Vector, NVDI and Stalker-it would cost approx. $2600-or more.)

TP> To every desperate ST-user there, worrying
TP> about the dying computer platform, I want to say: ST isn't the
TP> future of Atari computing. I owned two STs, loved them - and
TP> finally purchased myself a Falcon. And surprise: I haven't
TP> regretted that decision one single second =-) ! Falcons (and
TP> possibly Amigas) are what computing should be: computers you
TP> love to use.

How long have you had your Falcon, Tommi? I've had mine for a year and a half now and enjoyed every minute of it. Let's say for arguement sake that if I only keep the Falcon for another 6 months-I will have had 2 years of enjoyment out of it! How many PC Clown users can say the same? :-) While these ST whiners have been making themselves miserable, I have been making music, dtp and programming! I consider more than price when I buy something-I consider use value-how useful is a computer for what I want to do? I WORK with PC clones-but when I go home, I PLAY with my Falcon-it's FUN, dammit!!!

TP> They're available. A PC-owner may look at you wondering: "what
TP> kind of a poor fool chooses something like that instead of a
TP> Pentium?". But who cares?

An independent, intelligent user who thinks for himself-that's who
chooses a Falcon. :-)

Who cares-exactly my sentiments. There is always going to be someone
who dislikes your choices in life, so do what ya want-F*** 'em!

TP> fun computing can be... Tommi (waiting for C-Lab
TP> Falcon-040..)

(Doug waiting for an 040 Eagle)

TP> Don't know about you others - but for me,
TP> having to use Windows-PCs and Macs quite often, really makes
TP> me appreciate our own choice.

Last night, the Windows 95 tour pulled into Vancouver. Some friends
were asking me to go. I thought ah, what the heck? But then I got
home and started using Calamus, doing some graphics in DA Vector and
reading my netmail-and I thought-why would I want to go sit in a
crowded theatre to hear some Windoze propaganda when I have all this
right here. I'd have to be crazy!!! :-) Nope, my sanity remains
intact. Good to know that there are others who think the same, Tommi.
Take care.

This may be the Final time I will ask for help.

Or next time this may be 'FS Wordflair2' :-(

Please is there anyone at least who might just confirm that they are
using NVDI3 and Wordflair2 together? .. and printing .. and the
combination is stable...

With NVDI came a patch for Wordflair 1 version 1.13 to cure the
bug which causes the program to crash when run a second time:
perhaps someone could advise where/how to do the same to WF2.

I have asked Hisoft, but they could not see what the problem could be.

SYMPTOMS : WF2 crashes out at loading 1st time
May run 2nd time but only if the printerdriver is made
resident - but then crashes when asked to print a document. Or gives
a message 'unable to find Gothic/life/whatever font'
Or is very unstable.

I give up....HELP!!!

I have STFM 2.5 meg tos 1.02 127MB miniS

5179. Jaguar games for PC - not Falcon ?!

Newsgroup: comp.sys.atari.st
Date: 1995-06-27 00:00:00 UTC
From: gs01tph@panther.Gsu.EDU
Message-ID: <3sq16f$fg8@sphinx.Gsu.EDU>
Source record: 163181

Some of you may already know, that ATARI will convert some JAGUAR games for IBM PC-compatibles...

I don't like it at all - and why not? Because this _underlines_ the fact that Atari today prefers its old arch-enemies, PCs, over their own "children", especially FALCON. I think, some kind of a conversion of e.g. Tempest 2000 for Falcon could be possible. And for someone like Jeff Minter, even more possible.. But, of course, Atari can't afford to think its computer users; big MONEY is somewhere else...

To put it nicely, folks: sometimes business stinks.

There are two kinds of Doom's Day Prophets here: some of them say: "it's not profitable to program anything for Atari-compatibles, so why do it?" - and the others say: "It can't be done on Falcon... It can't, can't, can't!". But, fortunately, every now and then someone is either stupid enough, or clever enough, to make this "impossible" possible. And then we can see things like APEX MEDIA...

My heart breaks, when/if I see some Jag-stuff running on PC, reminding us of that Atari has abandoned us. I wish that they'd still have some sense of honor, to support those who supported them so long - even if supporting Falcon gave them more warm thanks than money..

TH

Source record: 163183

G > HEY, wake up!! It's the Atari ST we're talking about. Nobody
G > CARES anymore! To most people, it's a joke.

I am wide awake. I realize that the ST market is not as what it is. But there IS a demand, somewhat small, for commercial-quality software from a number of companies - who obviously DO care about providing a service for people here who DO care about their machines. Something that the selfish attitudes of people like you will only destroy. I suggest YOU wake up.

And the ST a joke? Try telling that to all the ST users who are still getting lots of mileage out of their machines. And in my neck of the woods, the ST has a fair bit of respect for what it's capable of - even from IBM and Mac users.

G > A reply like yours, instead of help or advice, just makes me
G > think that much more about throwing it out and getting an IBM.
G > Is that really what you want? One less ST user?

No, one less leech.

WHY should I aid or abett someone in an activity that will wind up destroying a small market and a number of companies who have given me strong support and updates for the products that I purchase? Not to mention an activity which, the last time I looked, is a FEDERAL OFFENCE, punishable by a LARGE FINE and POSSIBLE IMPRISONMENT, plus the possibilty of having your COMPUTER CONFISCATED. And believe you me, the Atari developers are willing to take action to protect their rights from being infringed by the likes of you.

G > Especially when there are NEWSGROUPS with names like
G > alt.binaries.warez.ibm that are jam-packed and I wouldn't
G > even have to ASK anybody. Hmph.

Sounds like if you DO go for the IBM you'll still be interested in only pirating software without paying for it. Just because there are entire newsgroups of IBM pirate software DOESN'T make it right - or legal - to do so. You are on very shaky ground trying to justify yourself, bozo.

G > Besides, I have BOUGHT my fair share of ST software in my
G > time, try and find it now, where I live.

Once again, as I said, there's always MAIL ORDER! It may not be as quick as popping down to the local store, but companies like Toad and STeve's provide quality fast service, up-to-date software

catalogues, and great follow-up, support and advice. But then, you wouldn't care, as you're only interested in one thing - THIEVERY.

Once again, kindly reconsider your actions. Is it worth it to help destroy a small market which is nonetheless STILL HERE for its users, who do NOT consider their computers a joke? Is it worth it to risk the possibility of losing your computer - or going to jail?

If not, then kindly stay out of this newsgroup with your grubby taudry justifications. Piracy makes me SICK - and is NOT an appropriate subject for aiding and abbetting in this newsgroup.

Hi,

I have just been back home at late night and I have received my Falcon.

With it, I don't have ram or hd.

I will get both tomorrow.

The question is that I have many stuff to get on with:

Falcon set up(video mode, hard disk, ...)
Quantum LPS 540S (Shouldn't be any trouble with it)
NVDI 3,
Screen blaster2,
CAF v2,
3 cubase modules.

And will be using either ahdi605c.zip from cubase ftp site, or my ICD
6.5.5.
Which one should I use?

I think I should get Falcon to wake up first. But then...

Which one should be the second? NVDI, Screenblaster or CAF?

Which one be the 3rd?

Can any clever help?

Please directly by email.

> I have been told ... that one of the DIP switches on the main board lets
> TOS know that you have a HD drive

Dip switch number seven. It needs to be switched to the 'on' position.

WARNING: Before altering any dip-switch, TURN YOUR COMPUTER *_OFF_*. (If you are absolutely paranoid, pull the power cord out of the computer - after switching it off, of course! Whilst you are unlikely to run into any problems performing this simple task, a little paranoia can save you a lot of woe.

If you undo the big screw immediately under the hard-drive, you should see a row of eight dip-switches at the front. Move switch seven to the on position. This enables "HIGH DENSITY" in the Copy/Format dialog.

Re-assemble your computer.

Plug in, switch on, and try it out.

Enjoy!

(My TT has been running like this, with an external DSHD drive for 18 months, and hasn't yet scrambled any data. BTW, some "cheap and nasty" high-density drives do not like formatting double-density discs when used in this setup - hence I suggest keeping a DSDD drive handy.)

(Awaiting a "You know nothing of what you speak" from R.S.)

>BTW, anyone know what "TOS2GEM" is supposed to do? Run TOS programs in
>a window in normal GEM or what?

TOS2GEM (Autor: Thomas Binder - binder@rbg.informatik.th-darmstadt.de) is
a little tool wich has to be installed in the AUTO-folder and stays
resident in memory. It allows GEM programs to run TOS/TTP-programs in
GEM windows under single tasking systems in a 'clean way' - one does not
need to do 'low level hacks' etc.

The following programs support executing TOS/TTP-programs inside
'terminal windows':

POV Shell (GEM shell for POV Ray) by Dirk Klemmt
Easy PGP (GEM shell for PGP) by Manfred Ssykor
Thing (Desktop replacement) by - ahem - Arno Welzel ;-)

The latest version of TOS2GEM including detailed documentation (only
in german yet) is available via FTP at:

ftp.augusta.de - /pub/sys/atari/t2g_r6_d.lzh

The latest english version of Thing is also available there:

ftp.augusta.de - /pub/sys/atari/thin044e.lzh

Ciao...

Did you ever see 'UPoint'? This is a nice GEM based newsreader/mailreader
based on UUCP for the Atari. You will only need an external text editor
for writing messages - thats all. UUEncode/Decode etc. is already
included.

UPoint is fully GEM based - even UUCP transfers are running in a GEM
window. And it works fine with Single-TOS, MagiC or MultiTOS.

Ciao...

Can you be more specific as to which NVDI works with MagicCMac.
There are several versions for different video cards and I am
a bit confused. I have tried NVDI 3 and MagicCMac crashes.
I did get Image Copy 3.5 to work by selecting the Matrix or
Crazy Dots driver, but only in 256 color. This is on a Quadra
630 w/32megs ram.

I did this for the same reason + better quality tower + cheaper.

I completely removed the PC mounting plate and made four stiffeners that
> I fastened the motherboard to using non conducting nylon bolts and spacers. As
> for the connectors. I have mounted the MB so that the cart port is at the
> bottom and the connectors are at the back of the case.

I was able to mount my STFM between the internal supports & the cover, so
that I can still fit a PC inside. I haveno plans to ever do this of course
;)

> I used IDC ribbon cable and made up leads from the MB to the rear of
> the tower case. I didn't use IDC connectors, I sweated over a hot soldering
> iron. I have made leads for the monitor, printer, keyboard and external audio.

I did the same, but drilled holes & put connectors on the back for the
KEYBOARD, MIDI,VIDEO,RS-232 & PARRALLEL ports. Plenty of spare holes for
extra serial ports & video connectors. if I ever need them.

> I also mounted my modem in the top 5 1/4 drive bay, this works quite

Good idea on the keylock, but might cause the machine to complain if it
can't find the keyboard on power up. The noise should alert you to anybody
trying to power the atari without your consent :)

: Printing/1stw2ps.arc Makes 1st Word useful. (Postscript)
: Network/Uucp/mercbin.lzh Mercury UUCP - Provided my net capabilities

I don't know where I might find them on Umich -- they're likely there,
but I wouldn't know the filenames offhand. However, my most used:

DeskManager 3.3 (Other people may use other AUTO/ACC managers, but I like
this because it's simple, easy to use and fast)
ANSITerm 1.90 (Not feature-packed, but a good ANSI terminal; and I sort of
have a vested interest in ANSI. :-)
Hector vs. the Mutant Vampire Tomatoes from Hell (*excellent* shareware
platform game. /Games/hector.lzh on Umich. :-)
ZX Spectrum (Christian Gandler's Spectrum emulator; I'm a speccy
collector. :-)
ProTracker ST (I also make MODs, and this is a very good MOD editor)

I have other favourites, but these come readily to mind, of the
PD/Shareware programs I use (and I've got *tons* of PD/Shareware... some
people may scoff at it, but I think some of the most useful and great
programs for our computers comes from the PD/Shareware realm)

Hmm.... it seems to me as though the general consensus is quiet approval!

In a way, it may as well happen for some stuff especially older games,
cos' you can buy an ST now for next to nothing second hand, and you get
what used to be thousands of dollars of software thrown in for nothing.

I dont think the pirate community worries much about Atari stuff much
anymore anyway.

Try GEMENV, it's on a.a.u.e on the languages directory.
It allows setting of the enviroment variables from within the program.
Put it in the AUTO folder & it loads the info from a file inthe root dir.

Call me really crazy, but sometimes I get a little carried away with thinking about things... But, here's my idea....

You install MiNT on the ST... then install X-Windows on that... then install Wine on that (WINdows Emulator), then emulate Windows 3.x? Does this seem possible to anyone?... I mean, could you imagine booting up your Atari when someone came over, running Microsoft Word.... "What kinda computer is that, man?".... "You wouldn't believe me if I told you..."

anyways... is it REALLY that crazy of an idea?

dave

Die die die die die!

Actually, I could use an MPEG player for an ST, I think I've seen them for
TT's and Falcons, but not ST. Can anyone help?

5209. 520STfm memory upgrade

Newsgroup: comp.sys.atari.st
Date: 1995-06-27 00:00:00 UTC
From: CALLUM.LERWICK@f47.n282.z1.fidonet.org
Message-ID: <225_9506271236@flight.org>
Source record: 163248

I have an 8088 XT clone motherboard sitting here with 640k (I think it really is 1mb), there are 36 RAM chips on this thing, and I was wondering if I could steal 512k off of it and put them in this 520STfm. When I opened it up it had two banks of RAM, one was unfilled. Where can I get a text file detaling how to do this type of upgrade? And a memory check program to see if it works when I'm done...

There are three brands of chips on it, Mortoloa (sp!) model number MCM4164CP15, Oki model number M3764-20RS, and a no-name brand of some sort that looks like this:
JAPAN 8634
HM50256P-15
U221699

Will these chips work?

> cunn1695@utdallas.edu

You came to the right group :-)
There are a number of Atari owners, that owns a Falcon now. It's not really
that rare, maybe it depends on where you live.
Most of the software that is coming out for the Atari ST/TT/Falcon range today
is taking advantage of the Falcon in some way or another. It's mostly
music & graphics programs and some games.
In Germany it's certainly not rare, than again Atari is quite well represented
in Germany.

Now a little about the Falcon030:

- It's ST compatible, much faster though.
- It looks like a an ST with black keyboard and darker casing.
- The main processor (in a standard 16 Mhz Falcon) is about 4 times
faster than a normal ST's.
- It has a second processor, a Digital Signal Processor (DSP) which
is very good in sound & graphics applications, it speeds up
things considerably when used properly.
- It has 16-bit 50 Khz (CD-quality) sound output and input, ideal for
musical applications.
- Most models have built-in harddisk (65-80 MB) and minimum 4 MB Ram,
can be upgraded to 14 Mb without enhancements.
- It's has a HD floppy drive (1.44 Mb), instead of the older DD
(720 Kb) floppy drive.
- It can be connected to a TV, RGB monitor, SM124/125 and VGA/SVGA
monitors.
- The graphics are much improved over the normal ST, it can show up to
65536 colors on-screen in 768x480 resolution on a TV or RGB monitor.
And 640x480 in 256 colors on VGA/SVGA monitors and other resolutions
are also avaiable. With some cheap upgrades the Falcon grahpics
resolutions can be higher, like 800x600 in 256 colors etc.etc.

I hope this helps... :-)

I own a Falcon myself and I love it. It's an exiting machine.

Keep Cool and Flying...

5214. Breakthru 2/Cybercube Help?

Newsgroup: comp.sys.atari.st
Date: 1995-06-28 00:00:00 UTC
From: mparrott@SINCOM.COM
Message-ID: <3srde5$hci@cutter.sincom.com>
Source record: 163103

I recently picked up a MIDI program called Breakthru 2 and am having trouble getting it to run on my TT030. Oregon Research, the US distributor of Breakthru is of the opinion that the CaTTamaran accelerator in my otherwise stock TT, is the cause of the problem. Would anyone else out there have any experience that would tend to confirm this opinion?

And while I'm at it, if anyone out there with Cybercube's current email address could provide it to me, I'd greatly appreciate it. I'm sure Cybercube will have some ideas on the subject, but I gotta get in touch with 'em first... :)

Thanks all!

Michael

5215. Atari Falcon030 and other bits for sale

Newsgroup: comp.sys.atari.st

Atari Falcon030, 4MB ram, 127MB internal drive. I can include
cables for standard printers, modem, external SCSI drive, VGA and
RGB monitors. £450.

Can demonstrate if you can get to Reading.

Can deliver within reasonable distance of Reading or Oxford.

Other bits and pieces:
£25 HiSoft DevPacDSP: Development system for the Falcon030's DSP subsystem.
£25 Diamond Back 3: Backup to tape, floppy, hard drive.
£15 Diamond Edge 1: Hard drive analysis, repair and optimisation.

On my STFM with the SM125 monitor if you hold the reset button for a few seconds, the monitor starts to squeal. I was never happy about doing that for extended periods. Also, the disk drives spin up anyway,whatever the state of the reset key.

: their shiny new PC. I have an ST simply because I baught one about 6 years
: ago and have great memories of the machine and would like to replay some
: of the old games!

It would be interesting to know, how many ST-users have abandoned the platform - and how many have stayed.. Considering the problems with Atari Corp. as a whole, we have surprisingly many loyal people left. And more may well come, because of MagiCMac... If not Eagle and Falcon-040.

: I'd like a Falcon... I wouldnt pay the current going price for one though
: considering the user base and market support.. :(

So, if I pay for my Falcon as much as someone pays for a Pentium PC - and I'm happier with my choice, isn't Falcon then well worth even a high price? It isn't a PC; you just can't compare the two very well.

: > Falcons (and possibly Amigas) are what computing should be: computers you
: > love to use. What else can we want? Software? There's plenty of that

: Machines you love to *program* perhaps. The PC is a joy to use with Windows
: but the assembly is... basicly.. cack... :(
: 68K machines are lovely... ;)

Joy to use..?? Hardly ;-) But then again, my opinions are only my opinions! And 68K machine language gives me as much hallucinations and headaches as Intel's assembler... Still, as so many people say it's easier, then I guess it is..

: > available. Hardware? Need CD-ROMs, scanners, etc.? They're available.

: At twice the price of the PC...

No, not anymore... Since Falcon, Atari world has become much more compatible with PC-side. As a result, today it's pretty easy to use cheap IDE CD-ROMS with even a humble ST, and most other components are standard PC hardware, too (hard disks, monitors, etc).. Maybe a little more expensive, but the difference isn't that dramatic todat, I think..

5230. 520ST FORSALE CHEAP!!!!!!!!!!

Newsgroup: comp.sys.atari.st
Date: 1995-06-28 00:00:00 UTC
From: joe@trdlnk.com
Message-ID: <DAw1CG.D4q@trdlnk.com>
Source record: 163119

I have a 520ST that was upgraded to 1MB.
Floppy drive with over 40 floppies full of Software.
Orginal color monitor that is like knew.
All power cords and adapters.

I'll sell for $50 plus shipping and COD charge.
If you're in the Chicago area you can pick it up
from me at work. I work downtown next door to the
Board of Trade.

writes:

> And in some respects, it is exactly these ST huggers being too cheap
> to upgrade to a Falcon that caused Atari to stop making computers.
> The price never comes down if no one buys the product!

Dont be a wanker! The reasons people havent upgraded from an ST to a
Falcon are as follows:

No software support
Small user base
No technical support
Dificult to buy over the counter (in the UK at least)
Difficult to find anywhere!
Overpriced for the base model

Peple just buy a PC. You can get far better and more professional
software on a PC and get better support...

> Atari doesn't advertise-we all know that. So who knows about the
> Falcon? ST users, of course. If they don't buy a Falcon, who else is
> there? Not many. The standard arguement is that the Falcon is too

Why should 'ST owners' stay faithful to Atari with the pitiful supply
of Falcons at extorsionate prices?

> How long have you had your Falcon, Tommi? I've had mine for a year
> and a half now and enjoyed every minute of it. Let's say for

I've had a Jag for about two years, what a waste of money that was.
That sort of broke my faith in Atari...

Take your 1meg PC simms, and slap them straight into your STE, and
go about you memory happy business.... no alterations required.

To hear you say you can get them next to nothing, is a bit annoying
though (grin).. we're paying about $65 around here. :-(

> : but now, at this point, I don't think it really matters.
>
> Please tell us why you think this then.

Most people will agree that its nigh impossible to mail order
many software articles. Being a flight-sim fan I'm after oldies such as
F16 Combat-Pilot, Falcon etc....can't be found anywhere...I lost all my
software (don't wanna talk about what happened mate tho'!)
Also F1 Grand Prix....outta stock since early last year.....
What do you do then apart from hunting down some chap willing to sell
them. I'm not advocating piracy, far be it but what the hell does one do in
this situation?!

Eureka - I have found the problem so please ignore my constant
mutterings...

Elsewhere on this group someone refers to Gemenv.prg - this is one
small auto folder prg that I had deleted for some unknown reason.
I have just tried running Wordflair with the corrected enviromental
variables and it seems to work fine!!

Thanks again to the two people who offered some advice!

CoMa ,STFax and Junior Office will send and recieve faxes. These are
shareware. BTFax will recieve only and is free. Is your modem FCLASS 2
or 2.0?

These programmes are available from most decent Atari sites.

CL> upgrade? And a memory check program to see if it works when I'm
CL> done...

It's too simple a job to require a text file, I think. The texts I HAVE seen (by Barry Orlando et. al.) are to do with the replacement of 4164 chips with 1Mbit chips to obtain 2Mb in each bank.

The PC has 36 chips because it supports a parity bit for each byte.

I guess the safest approach (provided there is space) is to solder sockets onto the ST motherboard and then plug in the new chips - this will save possible overheating of the chips if you are not experienced in soldering these sort of devices. The control lines you need RAS1 CAS1H and CAS1L should already be on the PCB.

The FREERAM.ACC is possibly good enough to show you that all is OK but if you have troubles then MEM12.PRG (PD) is prob. as good as any or the demo version (PD) of ATARITST.PRG.

CL> There are three brands of chips on it, Mortoloa (sp!) model number
CL> MCM4164CP15, Oki model number M3764-20RS, and a no-name brand of

CL> U221699
CL>
CL> Will these chips work?

Yup. The "4164" gives it away! Because they come out of an old machine they are fairly slow (150ns). Most STM store is around 120ns. But I shouldn't let that worry you, I have had a bank of 150ns RAM in my m/c for YEARS and it's never caused any trouble.

Doug, pull your head out!
Those files were always available, without charge. The $25 fee is
to cover collecting, putting in usable form, copying to disk and sending
all those files to you.
By the way, I would like to know how to get FREE files from
GEnie. I have always had to pay for my connect time on GEnie.

TL> Tandon TM262)? Does anybody who has done this have any advice?

If you have a back-up of the HD it can often improve things if you reformat the device. With time mechanical tolerances change and the platter surfaces age which can introduce seek errors.

Let the drive come up to normal operating temperature before formatting and choose the format option, if you have it, which marks bad sectors in the FATs.

First of all that isn't true. There were more than that (at least for
the Falcon).

> How about commercial products? How many? Maybe as many as 10!! The
> ST is surely thriving...

At least in Germany there you'll still find more than one or two
companies that live on sales for Atari computers. There are still
thousands of users who still spend money on software for their
machines.

> Personaly I dont think having the old games available from FTP sites would
> hurt the ST. It would probably increase peoples interest for nostalgas sake.

Bull.

> I think the ST may have a year left in it maximum before it finaly bites the
> dust... :(

If ppl think as you do you're probably right. If not there will be
a small ST user community whose members are still satisfied with the
excellent software that exists for their machines.

Sacha

Hey!!

Wait a moment...

What about System 8? Or the for May announced PCI-Macs? You will now see them in the end of August or beginning September (perhaps...). Or the RISC Power Books? Announced for early summer, the date now changed to September. (MAC Up 5/95)

Or lets go on in this chain of announcements. Windows 95, IBM's Power PC with OS/2, Magic for Falcon ...

You see, it's not only the ATARI market. It's a strategy the whole computer business uses to fool their customers and keep them. Instead of buying a program or operating system which really exists they are waiting for something (probably) better. A company which does not announce any projekt is dead for their customers (e.g. ATARI). Today OS and programs have become very complex and development of newer, more complex programs or hardware takes much time - not to forget beta testing.

Open your eyes! Apple is in NO WAY different to all those other companys.

Happy Computing!

mvh,
christian

>memory - it is best to run chimera from a 'clean' system.

Also, what window manager comes on the TAF disk? If it's twm, you can
save some memory by switching to a smaller one --- fvwm and 9wm come to
mind.

>PS. If you have a remotwer host that can run X netscape or Xmosaic, you can
>use this and set the DISPLAY variable to your atari's ppp assigned address
>and this will require almost no extra RAM. This is the preferred way to
>do things - nowadays I run Netscape remotely and it is much faster
>and better than Chimera.

<blink> That will certainly work, but I don't know if I'd call it the
preferred method. I've had occasion to run both Netscape (slap, slap)
and Mosaic remotely, and even over a 28k8 connection, it's slooooooow.
We're talking five-second lag time just to display a pull-down menu.
And the "busy downloading" graphics are shooting down the line right
alongside the useful data. A local browser will almost always be much
faster than one running remotely.

My SH204 works fine at first, but after it has been on for a while it has trouble reading and writing (whirrs away for minutes before finally succeeding). If I turn it off and then on. It makes various funy noises before shutting itself down.

Am I coorect in assuming that it is time to replace the drive (a Tandon TM262)? Does anybody who has done this have any advice?

Probably depends on the context of 'a little bit', but as a transition
it would be far more useful than the German version. As long as the
menu options and messages are English, we should be able to cope.

Hi,
The keyboard of my 1040ST got crushed on the way here. And I was wondering if there are users in the Seattle area who might know about a source for Atari hardware around here.
My hardware knowledge is pretty limited and this may be a stupid question, but would it be possible to just replace the whole keyboard unit with some other keyboard and just plug it in, where the original was plugged in?

My understanding is that DS, as part of his 030 accelerator project for the Mega ST ordered a bunch of RAM chips from a supplier. When he did not pay for them, he was sued. He countered that some of the chips were bad causing a delay in his development of the accelerator. He lost and with the cost of attorney fees, paying the judgment, and the vanishing Atari market and all that he was put out of business. A real shame because he had some good products. If only he came out with 3.1 of the Spectre software, ST users could use the Mac internet software that requires System 7.0.

>alongside the useful data. A local browser will almost always be much
>faster than one running remotely.
I generally run netscape even though I have no memory problems. At 14.4
I find it fast enough. Especially since all the data goes from the
outside to my school's system and a ridiculous speed (compared to a 14.4
modem). All I get is pre-dithered graphics and text - it is very fast
in that sense. Once in a while there is a delay going to the menu (generally
while a page is still being loaded - but its certainly acceptable)
The other nice aspect is I can still ftp something directly to my TT
while running a remote WEB browser and have it work at a reasonable speed -
since all the big data (256 color gif/jpeg) transfers are handled by my school
connection and it is cut down by a factor of 8 before it is even sent
over the modem! Chimera tends to tie of the modem when it is retrieving
a page (not to mention hogging a lot of memory). For people with 4

megs I would think running a remote netscape would be a better option.

BTW, to the person who asked about the TAF disks being put on GENIE, yes
everything on the disks is PD/free. You ordered from the TAF PD library
where the money is used to cover disk cost, administration/librarian
, duplication, etc. Just like all places that sell PD disks for a nominal
fee (I think TAF normally sells disks for $5, in this case you get
7 disks for $25)

OK, I finally found one that didn't bomb out. Its called "coloremu.lzh"
There were no docs accompaning but low resolution works pretty good, with
a preference of computerspeed rather than screen update. Medium resolution
works *not*. The authors e-mail adress is shown when you run the program
(No I can't run it now :-). He's norwegian though.

What I'm looking for is a program that can search through my Falcon hard disk for matches of a filename or wildcard and upon finding matches to be able to change all matches attributes. I need to be able using a wildcard to change the Read/Write, and Read Only status of files, as well as to toggle them hidden/unhidden.

I've used the file searcher by Alex Nicholls which does the job but if you hide files with this although marked hidden they are still visible. I'm not sure if this is a Falcon only problem.

Any help would be appreciated.

**** THE STE AND POPULOUSE ****

Well any of you that have the ST version of Populous,
the Populous.tos file size is 107k and the STE version yes
is 102k....

So if you wish to update your ST disk, you could delete the 107k tos
file and replace it with the 102k file...

ST disk code is E09731XL and the STE is E09731XD, printed on the disk..

If you like I can e-mail this file to those that ask,it packs
to 39k as a Zip file...

Please NOTE: this does not break any Copy right laws in NZ,
so you Copyright twits please don't jump on me, better
people that all of you have tried and failed...

NOTE: the Populous disk is copy protected, if you have to copy
the disk you will have to use a Happy or the Synchro Express/Blitz
type copy thing....

P.S. I have not tried deleting the ST Populouse.tos file and replacing
it with the STE version, I do not see a problem but I will try this out
on Friday and post the results here....

LEt's go over the things I've registered:
Connect - essential if you want to modem around.

CoMa - great for sending and receiving faxes. I use it as an answering machine because I have a ZyXEL modem. Part of the reason to buy ZyXEL, BTW, was knowledge of what CoMA can do with it.

GemView - if you need to look at any pictures, you KNOW this one will understand the format

Kivi - Of all the QWK readers I've seen, I like this one the best.

Freedom - A file selector on steroids.

Everest - a great GEM based editor with shortcuts.

SYSMON - when you just can't figure out where the damn thing wants it's configuration file, fire up this baby, and you'll se where it is looking.

Turbo Blanker - I don't need stars flying through my screen, I prefer my monitor to switch to powersaving mode. Doesn't work when TTP is active under single TOS, so I run it together with Turbo Veile.

Registered without paying: StZip, Thing

Other great PD stuff:
Nethack, the above mentioned Turbo Veile, Perl, GnuPlot, CSTex, LHA 3.10 (even though "test archive" doesn't work), HSMOD, CKBD with it's mouse accelerator, LEDpanel (because I have more HDs than led diodes).

There are more, but that's all I can think of offhand.

> my ST.

IMHO, the best comm program for your particular setup is Uniterm. Presuming that you use a fast modem (9600 baud or above), you also want the HSMODEM serial patch programs. Both of these packages are available from atari.archive.umich.edu and its mirrors (/Telecomm and /Utilities/Tosfixes).

My reasons for recommending Uniterm:
Fits on a floppy
Has built-in screen acceleration
Excellent vt100 emulation
Free

Connect is my personal favorite comm program, but it really requires a 16mHz 68k processor or above to compete with Uniterm's speed.

Check out Ghostlink, also on atari.archive (in /Network, I believe).

Interesting! I think I have the Speccy version of Stormlord, though I will have to check. Giving away the source is an interesting thing, too... sort of nostalgic for Speccy programmers I suppose. :-) (I've never owned or programmed a Speccy; I sort of got into it VIA the emulator) It's still quite fun, though, and nostalgic to rummage through the old days when games were imaginative, programmers skilled in the art of overcoming the machine's limits, and things were just generally fun. :-)

Hi folks,

Well this academic year is over, so I'm going home for the
summer. Apparently our computer dept. will be purging the file store over
summer so STAssembler will dissappear some time during the next 3 months.
As I've not had much feedback from the online ST community I don't think
I'm going to waste any more of my time, and account space on the home page,
so it will not be put back up next October. If you desperate want to try
and change my mind you've got till Sat 10:00 am (31st june/1st july ??)
to email me coz I won't be here after that.

See you all again in October, Sim

> easier, then I guess it is..

Again, each to his own. But the reason I love 68K is you've got so many registers (16 32 bit regs) and such a good set of opcodes! Intel has 4 registers... :(

> : At twice the price of the PC...
>
> No, not anymore... Since Falcon, Atari world has become much more
> compatible with PC-side. As a result, today it's pretty easy to use cheap

You may be pleased to know that someone who is currently working on a
Jaguar game for Virgin Games, will also be doing a PC version, and if he
has the time, will also be doing a version for the Falcon030. The game
is called Battlestar, incidentally... it's sort of a Battlesphere-style
game, and from what he's told me it sounds just fantastic.

BH> Doug, pull your head out! Those files were always available,
BH> without charge. The $25 fee is to cover collecting, putting in
BH> usable form, copying to disk and sending all those files to
BH> you. By the way, I would like to know how to get FREE files
BH> from GEnie. I have always had to pay for my connect time on
BH> GEnie.

You have a blatent grasp of the bloody obvious. Of course I knew
these files were already available! **<Sheesh>** Give me some credit.

I wasn't argueing about the $25 fee. For 7 disks that are more or
less fully configured, that price is a bargain. OBVIOUSLY that's why
I sent for them. I also like the idea of helping support the Toronto
Atari Federation, considering that they are one of the strongest
Atari User groups and have been doing some nice stuff for
Atari computers. (The recent ACE show, the Mint/XWindows disks, etc).

I was objecting to the fact that the full package (including install
program) was uploaded by parties unknown to Genie and is now
available on local BBS's. Tell me how this helps TAF in any way?
Doesn't it reduce the number of paying customers? Presumably some of
the $25 was to be used as a fund raiser for TAF. How much are they
going to raise now? And why go through all the hassle of taking
orders if it HAD been an official upload from TAF?

Genie and all the other pay services don't charge for files-they
charge you for your connect time. You contradicted and answered your
own statement in the next sentence. Also, most popular files on
Genie are downloaded and distributed to local Atari bbs's. Every
down load of the TAF disks is not from Genie.

If you had bothered to read my whole message, I specifically stated
that it was NOT a flame-I merely wanted an explanation of what was
going on, and figured that TAF members might have heard something.
Next time, read for comprehension as well as speed!

This kind of stuff really belongs in the advocacy/computer
religion/flame groups, so I've adjusted the followups accordingly.
But, yes, I've used both and I feel much more comfortable with the
Atari. It crashes much less frequently than an equivalent PC running
Windblows or an equivalent Mac.

Email to "Vlad"!? Yeah, that'll get really far along the net :)

If you mean onto a disk an IBM can read. Format the disk on the IBM,
then both the Atari and IBM can read & write to it.

To change text file format, save "as ASCII" then import them into the
software.

It's not possible to run atari programs on the PC (without paying lots of
money for an emulator), but converting text files around isn't too tricky.

For Sale: From stuart@rtfm.mlb.fl.us

Atari ST and accessories:

1040 STf SUPERCHARGED:

- EARLY Motherboard; this is the good model.

- Z-RAM 3D/4Meg fully populated. No pingrid! Soldered in.
Power to original 1meg has been cut to conserve power.

- AdSPEED 16 MHz 68000 accelerator. Socketed. Speed switch on
back of computer for hardware switching. Includes QuickST II
software. Bugger really flys! Microsoft Sucks!

- TOS 1.04. Six chip set.

- 38400 Baud harware mod. Soldered in. Switch on back.

- Z-Keys hardware IBM remote keyboard interface. Not installed
now, but can be done in ten minutes.

- All UNDER THE RF SHIELD! It all fits. I had to do some
modification, but it is clean. NO heat problems.

- Includes left-handed mouse, all original manuals, and assorted
other stuff that came with it.

All for $250

Other stuff:

AdSCSI HD controller and Seagate ST-296N in custom pizza-box $150
case. Built out of old Wyse PC. 100 Watt power supply.
Room for two 5.25 inch and one 3.25 drives. Includes all
cables. Professionally assembled. No bad sectors.

SM-1224 Color Monitor. No burns. Reliable Goldstar model. $100

SM-124 Mono Monitor. Video comes and mostly goes.Goldstar.AS-IS $15

Astra SW-2 Monitor switch. This is the GOOD one that switches $30
the POWER and video. Front switch for power. Also a
switch for audio. Audio out jack. Video out jack for
STFM's.

Spectre GCR with some software and ROMS. Versions 1.9F and 3.0 $100
Will throw in DataPacific Translator One for free if
you need a door stop ;-) Version 1.9f can use it. W/manuals

UIS III V. 3.0 and II v. 2.0 Universal Item Selector. W/manuals $10

Flight Sim II Color. With Manuals. $10

STart magazine Disks. Spring '87 through May '91. No mags B.O.

140 or so blank Sony 720K bulk disks. Mostly low or no usage. $30

TERMS: You pay shipping.
Items are guaranteed against DOA unless otherwise noted.
Prepay or COD. Other arrangements possible.
Better deals if you buy the whole mess.

I have to move before the end of July, so speed is of the essence...

Thanks for your time.

I search a LINUX drivers for ATARI TT serial port (38400Bds or better)
and a driver for VME graphic card (NOVA ATI 64 or other).

Thanks for Email Reply.

Windows is *not* multitasking...

Also, the interface was invented a long time ago, and the PC
world is still about 5 years behind for development of environment
software... Please, I originally didn't want a little battle of opinions
on PCs and Ataris... This was about the thief (seemingly supported!)
wanting to break the law and hurt people, and asking others to help him
in his mission...

|| And in some respects, it is exactly these ST huggers being too cheap
|| to upgrade to a Falcon that caused Atari to stop making computers.
|| The price never comes down if no one buys the product!
|
|Dont be a wanker! The reasons people havent upgraded from an ST to a
|Falcon are as follows:
|
|No software support
|Small user base
|No technical support
|Dificult to buy over the counter (in the UK at least)
|Difficult to find anywhere!
|Overpriced for the base model
It is difficult to justify a Falcon when it costs more
than a similarly equipped Mac and twice as much as a low
end 486 (and that was 18mos ago). Not to mention cost
and availability of upgrades and software.

If one wants to burn money, they can just do it in a more
direct fashion.

MS-Windows is the GUI DOG. Not only is GEM a better interface but,
so is everything else. Finder/X11/OpenWin/PIM.

Why do you think the new version of windoze is moving to imitate
OS/2-PIM and Finder?

I have used both, and I prefer gem+mint over windows. There is something
about windows that just doesn't feel logical at all. This is what I feel and
are just my opinions; you do allow me to have opinions, or...?

Btw. MiNT is _NO_ desktop. Are you in a position to compare windows to it and
even comment? Now could we take this to advocacy?

>that was suppose to be included. Then again, the complete package,aside
>from the manual, is in German and mabey I have overlooked something.
>
>Mike
>

It depends entirely where the package was bought from as well, because
DA REnder Kit is a fairly new package whereas DA Vector Pro is not. And it
is included in the DA Pro no DA Vector 1.20.

The render kit can play back MOV files and has MPEG players, FLI/FLM converters
and can incorporate single frames with snd sound files or associate them
with certain frame length and sizes.

If you want to have any more information just email info@lexicor.com

Thanks

Yat @ Lexicor

Interesting. Before we Atari registered developers could buy a DevKit
we had to sign a non-disclosure agreement which prevented us from
legally selling the kit to someone else. Now nobody seems to care.

BTW, Ducky, your prices are too high, IMHO. Quack, quack.

Okay, I'll keep it short, but typically opinionated ;-) My favorite (can't live without 'em) five or so SW/PD proggies are:

(in alphabetical order to avoid any favoritism...)

1) IdeaList 3.6 - ShareWare - 20 DM - Christoph Bartholme
- without exception the _ultimate_ print utility
(if you own a printer, you _need_ this!)

2) SilkBoot 2e - FreeWare - Mark Slagell
- monitors ACSI 0, boots as soon as HD is up to speed

3) SilkMouse 3.2 - FreeWare/Donation Ware - Mark Slagell
- formerly SW 10 US, now accepted, but not solicited
- IMHO the _best_ mouse accelerator & screen saver

4) Storm - ShareWare - 25 Cdn - Alan Page
- no debate please! IMHO the best comms proggie ever
(with apologies to all you "Connect"ed folks ;-)

5) SuperBoot - ShareWare - 25 US - Gordon Moore
- great full-featured boot manager

6) Two-in-One - ShareWare - 20 DM - Gregor Duchalski
- complete, trivial to use, drag&drop Archive shell

(and yes Hutch, they're all registered... don't want to start 'im going!)

an endless number of smilies are implied after that last comment ;-)))))))

Source record: 163090

Mark Montreuil (ai066@FreeNet.Carleton.CA) wrote:
: I tried exporting some RTF's from WP 6 to import on my Atariworks, and
: Works coughed and died. When I tried exporting rtf's from Works to WP, WP
: did not like them either! Is Papyrus better at handliong RTF's than
: Works? Has anyone tried inter-platform file swapping through RTF's?

I've tried it with varied success. I wrote my resume on AtariWorks
at home, saved it as RTF and pulled it into WordPerfect for Windows
(version 6.1) almost fine. The fonts were incorrect, but that
was easy to fix.

However, the reverse didn't work! After I finished formatting my
resume in WordPerfect, I saved it as RTF and tried to read it into
AtariWorks, and it just gives me an error reading file. The file is
good, but I think it can't handle some of the font mappings and other
stuff that WP seems to have inserted in the RTF...

I've been puttering around with MiNT + X, and am having some strange characters come across when running an Xterm. Pressing some of the "special" characters, like ' and " return not what is expected. I don't recall what comes out, but I've pressed every key and some characters are missing! (like the square brackets). When I press these, I get umlated a's and u's.

Where is this coming from? is it from Xterm or from the kbd scan code driver that needs to be installed?

Why don't you look in Micro Mart (Thursdays 60p) which often has a few SM124 second hand for around £50. Or maybe you have a local "adverts" newspaper (in UK there is one known as "Loot"). There are quite a few used ones on the market.

If you want a new one your best bet is to ring Systems Solutions (01753-832212) who do one at £129.95 (without sound) or £149.95 (with sound). Ladbroke (01772-203116) do one at £99.99.

SM> cost, administration/librarian , duplication, etc. Just like
SM> all places that sell PD disks for a nominal fee (I think TAF
SM> normally sells disks for $5, in this case you get 7 disks for
SM> $25)

I was the one who posted that message. So in other words, because I was a sucker and paid $25 to your bogus deal instead of waiting 2 weeks for the disks to be posted on Genie, I pay and others ride for free? Gee, that sounds REAL fair! If that's the case, why don't I just upload the disks to all local bbs's and encourage others to do so too? That way we can be sure that no one else gets burned. I notice that TAF didn't make much effort to inform folks that it would shortly be available for free! As we all know, files posted on Genie are soon distributed to local bbs's. If I had been informed that this package with install file was to be uploaded for FREE, I never would have sent the money.
I am well aware that these files are PD-I thought the idea was to raise a little money for TAF, cover the cost of the disks, and in return get an easy to install Mint/Xwindows package. Instead, I get burned and made to feel like a sucker for supporting TAF.

* URGENT! - SUPPORT RE:PORT

THE RE:PORT MAGAZINE STILL EXISTS !
It is the only paper magazine for Portfolio in English
that has survived. 17 issues has been published.

Here is what the publisher DAVE STEWARD has sent us:

I am offering back issues for US $10 (US funds only!) each.
Here is the
information, which you may feel free to pass on to others.
I hope your
Portfolio club goes on for a long time!

Any of these issues can be had for US $10 each (check or
money order only)
from:

Re:Port
c/o David Stewart
1504 Winterset Parkway
Marietta, GA 30067

Each issue comes with a 3.5" IBM DD disk, which can be read by the Atari ST computers as well as Macintosh computers with SmartDrives (and of course by any IBM-PC compatible computer).

Just indicate the volume/issue numbers that you want. Please allow four to six weeks for shipping.

If you have any questions about the issues or programs that you'd like, please send email to 73770,2021 on CompuServe or DAVESTEW@NETCOM.COM on the Internet.

NOTE: Please place your order as soon as possible! Re:Port is stopping publication soon. This offer may not last!

Please SUPPORT DAVE STEWARD - he needs encouragement and encouragement!!!

- send him e-mail and subscribe to this magazine
- the Re:port is a unigue source of programs for Portfolio
- send him texts and files to be published

****

* HOW TO GET IN TOUCH WITH PF USERS

Many of the PF users will never get in touch with Internet.
And if they do, search engines for WWW and NET usually produce
no information about Portfolio.

We can help PF users in the outer world (and we are obliged
to do so, they are our computer friends). Experience shows
that they are glad if they learn that PF has not died.

Here are three tips how to help other PF users:

1. where to find them
2. what to offer them
3. run a local club

1. Where to find PF users (in your country):

* read private advertisements in PC magazines. You can find people selling PF. Try to touch them. They will be surprised and they usually say that they would not sell PF it there were more new things. There are new things but they do not know about them. And will not know UNLESS YOU TELL THEM.

* read private advertisements in city FREE-AD newspapers. There are usually columns for computers and people can place an AD for PF here for nothing (those who sell PF usually do not want to spend any extra many).

* in many countries there are strong groups of Atari ST users. Often ATARI ST users have Portfolio. Get in touch with them.

* dealers - some dealers of Atari stuff have addresses of people who bought things from them.

* if you want - place your own advertisement in PC magazine, or FREE-AD newspaper. (Well, it proved not to be too efficient)

2. What to offer to a newly found PF user

* Prepare a diskette with some files that you yourself use and add things from internet or other sources. You can offer such a diskette for some price (5 USD or so).

* Write some short summary of what is available for Portfolio. And there are many things. (E.g. print this issue of Portfolio News on your printer and distribute it.)

* Inform the PF users that there is RE:PORT magazine and Portfolio News (you are just reading) available and that you can get him a copy. (again you can ask for some money)

What is available for Portfolio - a brief list
(information for any PF fans especially outside the internet)

- new Portfolios still sold
- many countries (many old dealers) still support Portfolio
- parallel, serial inteface avaialble
- parallel intefaces, RAM cards are produced by our Portfolio club
- FDD 1.44 MB unit for Portfolio (completely new product for all PF users)
- 1 MB RAM cards still sold (only a few PF users outside the USA know about the 1 MB RAM cards)
- Re:port Magazine still published
- Portfolio News published in Czech on paper and in English on the net
- old soft and new soft

****
* History of Portfolio club in CZ (Czech Republic)
(written by JS)

First Portfolios arrived in CZ in 1989. There were some
activities at that time, something like a club, but
everybody relied on Atari dealers. In 1993 the Atari died in
Europe and so did the dealers in CZ.

Many (cca 3000) Portfolios have been sold in CZ since 1989.
The greatest problem was the national version of Portfolio.
Atari dealers told everybody that it was not possible to
make PF "speak" Czech unless chips inside PF were changed.
This "operation" increased the price of PF by 1/3.

I bought a second hand PF in fall 1993. Soon I learned that
without PC or a RAM card my data were always lost. Then, in
Jan 1994, I finally saved some money and bought a RAM Card.
I happened to get a diskette with BJ Gleasons PBASIC 4.91
and I learned it is possible to work in graphics with
a speed of up to 20 screens per second.

This gave me the idea that national version can be achieved.
I wrote a simple text editor running in graphics using
PBASIC. And it worked. I became sure that if somebody wrote
the same in assembler it would be as fast as the text mode.
I looked for someone to do this job. I did not find anybody
so I wrote an assembler editor (called Czech editor) by
myself.

But later I found two brothers (Martin and Milan Hrdlicka)
who were making soft for Portfolio and they completed
resident driver for screen and keyboard.

So the first goal - national version has been achieved. We
started to sell the Czech editor and the national version.
Thus we got in touch with other PF users. We saw the need to
produce hardware - so we started - RAM Cards, parallel
interfaces, FDD unit, PortWalk and software.

Atari Web Pages Latest News
Version 1.0 Date 6/6/95
by Mark Stephen Smith

Hello and welcome to the news item on the Atari Web pages.
This document
will describe the Atari Web pages as provided by Mark
Stephen Smith and will
inlcude a list of the latest updates for the month. Each
month I hope to update
this text with the very latest additions and news on the
Atari Web pages.

Hopefully these pages will provide an invaluable service to
their users, but
they are still at an early stage and developing all the
time. As such any
feedback and support you may have for these pages is more
than welcome, it is
infact encouraged. The more input I get from its users the
better, as then I
will know what is good and bad about these pages and can
change them
approproately in the hope of increasing their value to their
readers.

Where do I find the Atari Web page?
~~~~~ ~~ ~ ~~~~ ~~~ ~~~~~ ~~~ ~~~~
>From your Web browser choose to open URL and enter the following address:

http://www.mcc.ac.uk/~dlms/atari.html

If you can store a hotlist of addresses or something similar on your browser
then it may be worth including this address for quick access in the future.

Once you've done that you should see my main page so I hope you enjoy it, and
don't forget to write with your thoughts.

(*NOTE*: This is the new site for the Atari Web pages, take note of it!)

Newsgroups
~~~~~~~~~~
Atari related newsgroups. Send updates. The currently supported news are:

comp.binaries.atari.st
comp.sys.atari.advocacy
comp.sys.atari.announce
comp.sys.atari.st
comp.sys.atari.st.tech
comp.sys.atari.programmer
rec.games.video.atari
alt.games.lynx

What to expect in the future
~~~~ ~~ ~~~~~~ ~~ ~~~ ~~~~~~
..... In the near future I will be adding a Portfolio section to cover the portable
computer by Atari called the Portfolio. This area will be supported by the Portfolio club.
~~~~

Thank you and see you with the updates to these pages next month!

Mark Stephen Smith : msh@dl.ac.uk or dlms@nessie.mcc.ac.uk
Atari Web Pages : http://www.mcc.ac.uk/~dlms/atari.html

THE UNITED STATES

Portfolio Support Area - Fred Horvat

Well a couple issues back I mentioned I would give a list of
dealers that supported our favorite palmtop. Well below is a list of
places that either have hardware, software, or both for the
Portfolio. Besides the listed dealers a great source of information

and software is online. The larger bulletin boards services like Compuserve and Genie have file directories just for the Portfolio. I also believe under the Atari file archives you can still request files from the Portfolio directory. Besides the files, online there is a wealth of information about the Portfolio and palmtop computing in general. Beside bulletin boards as a source for public domain an shareware software is from public domain librarians. For a list of commercial software vendors check out the book that came with every Portfolio called "APB" which stands for Accessories, Peripherals, Bulletin. Besides having commercial software available it has tips and other use full information. The version I have is Volume 2, Number 1. I believe this was the last one printed. If you don't have a copy of the "APB" contact Atari, the cost listed on the cover is $1.00. Last but not least let us not forget our local user groups and Atari dealers that have been there all these years for us.

Atari Computer Corporation
1196 Borregas Avenue
Sunnyvale, CA 94089-1302
408-745-2000

Services Available : Atari Portfolio purchases, exchanges, APB software purchases (if available).

THE UNITED STATES

Hello again,

>There are some arichves that have PF files.
>There is CAIN who has Portfolio Corner.

I have taken all the files from archive.umich,edu, and am looking through them. Cain carries only a little bit of info, I will send them some when my pages are ready.

I am putting together WWW page, I have the FAW, and and putting up anything else I can about the Portfolio, please sen me any info you have, and I'll put it on a special page. you can MIME enclose it in a message here, or you can ftp stuff to:
donna.umd.edu in the /pub/incoming dir.

ITALY

An Atari dealer from Italy has just contacted us. More information in next issue or upon request.

****
HELP CORNER

This part of Portfolio News is designed to bring your
questions, troubles and worries to the public.

If you have any suggestions that may help send your help to
the person asking for help and send also a copy to Portfolio
News. All PF users may benefit from it.

Let us start:

You might be able to help me with a problem.

I recently bought the serial link which came with a card (Slave+ ver 2.5)
and software for my PC (Master PC ver 1.0) but I am having trouble with them.

I know that I have things configured properly because the PC lists the
directory of the Portfolio upon starting the software. But when I attempt
to transfer a file from the Portfolio to the PC the program eventually times
out with a message that the Portfolio is not responding. Then I find a zero
length file on my PC so at least I know an attempt was made and that the
connection is good.

Any ideas what would cause this program to lock up when attempting to
transfer files. I am finding it very frustrating not being able to download
the interesting software I have found for the Portfolio. I also need a way
to back up the data I have on the Portfolio.

Take care...

Darrell Burkey +61 6 295 6820 (work)

Try "http://www.pcug.org.au/~dburkey"

****
SOFTWARE PACKET No 2

This issue of Portfolio news comes with a packet of software for Portfolio. Here is a list:

ACOM.EXE a communication program for serial interface
ACOM.DOC text to the file

60COLS.EXE 60*10 characters on PF screen a demo by Dave Steward
60COLS.DOC text to the file
CHARDATA.DAT character set for 60COLS.EXE

PSHELL simple shell commander for COM and EXE files on Portfolio

How to get the files:

1. Save the e-mail message into a file. In ELM mailer press
s) option and enter a name of the file. I think it is good
to name the file SOFT2.

2. Then quit your e-mail program. You will be at the unix
prompt.

3. Use the UUDECODE command to convert the SOFT2 mail file
into data file.

Enter following:

UUDECODE SOFT2

The result should be a file "soft2.arj" 26898 bytes long.

(Be careful about small and capital letters - unix makes
difference between them)

4. The "soft2.arj" is a normal ARJ file. You must tranmit
this file from your unix directory to the local (DOS)
directory. You fill use the FTP programme.

5. The soft2.arj can be extracted by arj.exe file.

6. Here is the result:

60COLS EXE 9,419 04-27-91 3:36a
60COLS DOC 1,805 04-27-91 3:39a
CHARDATA DAT 168 04-27-91 1:51a
ACOM DOC 13,177 08-21-91 10:37a
ACOM EXE 9,955 08-21-91 10:37a
PSHELL EXE 1,563 09-09-91 10:25p

7. If you have any problems ask your internet supervisor or
send e-mail to our club.

****
SERIAL COMMUNICATION - ACOM
Finally a serial software that works

I have come across a few programs for serial communication.
The only that worked is the ACOM.EXE

More info about the program (the complete documentation is
in the ACOM.DOC file)

ACOM is a communications program written for the Atari
Portfolio. However, it will run on IBM PC compatibles as well.
Its purpose is to provide enhanced terminal emulation and file
transferring capabilities for the Portfolio. It can copy the
conents of a 128k ramcard from the Portfolio to a PC in a minute
and a half. ACOM requires approximately 32k of memory for all code and
buffers.

ACOM can be used as a terminal emulation program, as a file
transfer program, and as a host control program. It is able to
determine whether it is running on a Portfolio or a PC, and setup
its interrupt handling accordingly.

Regarding the speed of the Portfolio com port, it seems that
38400 baud may be the highest feasible transfer speed. This is
about the point that other factors influence the transfer rate

more than the raw communications port speed. This speed also
works satisfactorily on most other PC's I have tested.

A fair amount of time and money has been spent developing
this program. If ACOM proves useful, your comments and bug
reports will be appreciated. Should you wish to compensate the
author, get on our mailing list, and receive the latest copy of
ACOM, please specify your disk size and send $25 to

Roudley Associates, Inc.
PO Box 608
Owings Mills, MD 21117

If you use the program, and do not wish to compensate the author,
please be generous to those in need and increase your donation to
your favorite charity or church.

Charles Cook

HPC 104 256k Memory expansion+ 2900
HPC 301 PC card reader 2800

HPD 300 parallel interface 1400
HPD 400 128KB RAM card 2300
HPD 500 FDD unit 1,44 MB 5800
+ 25pin par. interface
+ 32 KB RAM card with software
HPD 600 PortWalk tape recorder 700
interface
HPD 103 Leather case for PF 500
HPD 200 Portfolio Tech. Guide 400
120pgs, English + diskette
HPD 203 Portfolio Programmier Praxis 400
345pgs, German + diskette
HPD 700 Upgrade your RAM to 512 KB 3500
HPD 801 60 pin PF BUS connector 300
HPD 803 hardware adaptation for 700
permanent NiCd usage

****
How to order the products

1. Decide what you want to get. It seems better to find
some PF friends and share the expenditures on charges
for sending the stuff.

2. Send us your "order"

by e-mail to sedlakj@dec59.ruk.cuni.cz
by fax to + 42 2 29 51 86

3. We will contact you back, telling if the products are
currently available and stating the total price in CZ.
(total price + shipping charges).
Current rate: 1 USD makes 25.30 - 26.30 CZ crowns

4. Send the money in USD or DEM to our bank account

account no. 770252-028/0800
at Ceska Sporitelna Praha 2

5. After receiving a note from bank, we will send the ordered
things directly to you.

Note: The HPD 700 is internal upgrade of your Portfolio RAM.
You must send your Portfolio to us. The replacement takes
5 days.

****
MORE INFO ON THE 1 MB RAM CARDS

For the technical specifications, I will quote from the booklet supplied
with the RAM card itself. "The FMAP 1 fits in the Atari Portfolio memory
card slot like 128K RAM card and has 8 ti;mes the file storage capacity.
The memory is organized in 64K blocks. It offers over 10 year data
retention without any batteries or any other power source. Data bits are
retained as static charges on electrodes encased in nearly perfect
insulator. This is essentially the same mechanism as that used in EPROM.
Unlike EPROM, flash memory can be erased (flashed) and rewritten while still
plugged into the Portfolio. The flash memory card data is also safe from
magnetic fields that can corrupt data in ordinary magnetic storage media.
The cards add only baout 3% to the load on the Portfolio's batteries when it
is turned on and no load when the Portfolio is turned off. The card can
safely be left inserted continuously."

****

THE 1.44 MB FDD UNIT for Portfolio

In 1993 one Portfolio fan succeeded in connecting a 5.25"
unit (360 KB) to Portfolio. Later the connection to 3.5" FDD
unit (1.44 MB) was realized. The purpose of this was to
replace the expansive RAM cards by a cheap device with
multi-fold storing capacity. The cost of the unit is lower

than the price of two Atari RAM 128 KB Cards.

In the end a special 3.5" FDD unit for ultra light notebooks has been utilized. This unit also solves the problem of power supply. The ordinary FDD units require 12 Volts supplies. The ultra light FDD made by TEAC requires only 5 Volts and is only 12.5 mm high.

The idea was to create a device smaller than the Portfolio itself and the idea was realized. The circuits has been place under the FDD drive so that the total height do not exceed 20 mm. There is no comparable device in the world market.

The unit also includes a parallel interface fully compatible with the Portfolio interface. This means that the internal applications and file transfer software can communicate through the interface without any difference. The built-in interface is fully "transparent" - this means that you can read from the diskette and at the same time print the data through the parallel interface.

The FDD unit is able to read and write 3.5" diskettes both of the 1.44 MB and 720 KB capacity. The IBM PC standard is fully supported.

Another important part of the unit is the software driver that installs the FDD as another drive of your Portfolio (Unless other drives already installed, the FDD will appear to be the drive D:). The driver is a 3 KB long resident program that is loaded via CONFIG.SYS command DEVICE. You can use the new drive (D:) as any other drive you are used to.

The greatest problem to solve was the power supply. The FDD unit requires at least 5 Volts and Portfolio can give 4.5 V at its maximum. (If NiCds are used only 3.6 V). The problem was also increased by the fact that the motor of the FDD needs 600 mAh at its start and this power "shock" may destroy some Portfolio circuits.

The solution was found in an additional NiCd battery pack (7V, 750 mAh) that is connected into the FDD unit from the back side. If fully charged, Portfolio can work with the unit for 4 to 5 hours. The battery pack is charged automatically if original Atari AC adapter is connected to Portfolio. The original Atari adapter must be used as it gives the accurate voltage for recharging the NiCd pack. (The universal AC adapters are usually weak and if they are connected to the 750 mAh pack their output vo ltage goes down.)

Other unique qualities of the FDD unit

* Cash utility

If you install the driver by means of the DEVICE command in CONFIG.SYS the driver creates a CASH memory area that buffers data. It is necessary to make the unit work.

The reason is following: Portfolio has a bit simpler BIOS than PC. And it is not designed to work with large quantities of data. If Portfolio reads from a disk device it reads always one sector only. And if two following sectors are to be read from the diskette, the BIOS has no time to work with the data. This causes big delays. (The diskettes rotates 6 times a second and thus reading 18 sectors (one track, that is 18*512 bytes) takes 3 seconds. So for example to read 43 KB PBASIC from the diskette would take 15 seconds.

The algorithm of the cash is the same used in Pentium processor : Write-Through and Write-Back. This enables to read one track at once (9 or 18 sectors during one rotation) and then the BIOS reads the data in its slow way from the cash.

The same problem is when writing data back to the disk. The cash solves it again. All data are written down into the virtual sectors in the cash and when the output operation is finished the data are written to the diskette at once.

* The Portfolio speed

The slow speed of the Portfolio allows only 720 KB diskettes to be processed. If standard rutines are used for reading 1.44 diskettes, every third byte is lost. This has been solved by a special hardware solution that locks up the clock cycle of CPU bus and thanks to a special rutine that is two instructions shorter than the standard rutines.

* ROM error

Yet another problem remained. There is some error in Portfolio BIOS that causes the failure of MkDir (INT 21H, Fn 39H) function with 3.5" 720 KB diskettes. If you use the MkDir command with 720 KB diskette Portfolio will crash. The data on diskette are lost and FAT is damaged.

Even this problem has been solved and the driver also takes care of the MkDir function and if the user attempts to make a new directory the driver replaces the bad rutine in ROM by its code.

About the designer of the FDD

The FDD is a result of one persons efforts. "I spent the whole 1993 on the FDD development", says Tomas Dusek the father of the unit. "I think it was worth while. I learned

the very details of PC BIOS and I made something that nobody
else has made. After the PortWalk (tape recorder interface)
it was my second peripheral for Portfolio. The crazy thing
is that I developed the unit in my free time, ..., and it
was mainly sponsored by money from my full time job. At day
I worked in one computer comp any, in the evenings I used to
solder. When I started to produce more units I had to make
the business legal - I had registered a private company
"Sunny-Soft". It is not a big company - in fact just me. But
it works."

BUY THE FDD UNIT NOW

The 1.44 MB FDD unit and more at the price of just two Atari
128 KB RAM Cards!!!
The FDD units opens the data world to you and your
Portfolio. Now you can read the data from diskettes directly
without any cable and file transfer software. You can save
the results of your work on the diskettes and work with it
in your desktop PC in almost no time.

SPECIAL OFFER:

1.44 MB FolioDrive FDD UNIT
25 pin parallel interface on board
7 Volts NiCd battery pack
+ parallel cable
+ software on diskette included
!!! + 32 KB RAM CARD with installed driver

This all just for 5800 CZC. Where else in the world can you
get so much for your money?

****
* What we are looking for:

- any PF fans that want to join us

- any PF users who are able to develop new soft

- information about: Re:Port, Portfolio Connection Newsletter, etc.

- any kind of emotional, mental and other support

- any dealer that is willing to go on with
PF stuff and wants to sell our products

****
This issue of Portfolio News was published on May 15, 1995.
****
Special greetings to:

Don Messerli - for his soft and graphics
BJ Gleason - for PBASIC and tons of other things

S. Spoelstra - for his BASIC, and others
Tomas Dusek - Go on developing the hardware!
Martin & Milan Hrdlicka - the authors of new graphic BIOS
Dave Steward - Re:Port is the only that has survived, and that is
your work, thank you

and to other PF friends who support us

...or eight chips 256KBitx4 in later 1040s.

5313. Re: Chimera--no RAM

Newsgroup: comp.sys.atari.st
Date: 1995-06-29 00:00:00 UTC
From: Cliff Cook <ccook@icis.on.ca>
Message-ID: <DAx1F5.1t6@icis.on.ca>
Source record: 163143
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I seem to be running out of memory on a 4 meg Falcon too. Chimera consistently folds up on certain gif's. For example, every attempt to connect to Toad seems to be going OK, Chimera says its loading the main gif, and then closes it's window and drops me back to the desktop.

Can I configure Chimera to read newsgroups? How do I tell it the name of the newsgroup server? How about mail?

Cliff

>1) Thing - Essential PD desktop. The latest version with tab'd dialogs
> and Group icons is amazing. Better than gemini in almost every respect
> (apart from the console window not being as good).

Thanks :) BTW: The latest version is always available via FTP at

ftp.augusta.de /pub/sys/atari/thinXXXe.lzh (english version)
thinXXXd.lzh (german version)

The current version is 0.44 (thin044e.lzh), but the next release 0.50
with colour support for the console window, much faster directory
reading in text mode etc. will come soon. (i hope i can release it
next week).

>2) ST-Guide - Mr Weets' wonderful hypertext viewer.

Yep - it's really a nice peace of software. IMHO the standard hypertext
system for Atari.

>3) FalconScreen - the most compatible screen expander for the falcon (even
> works with X11R5).
>4) WinX 2.3beta - Wonderful....cann't wait for MiNA to hit the streets.
>5) Fsearch - Fantastic (and simple to use) file finder & grep accessory.

Did you ever try ParaFin? It can search/grep etc. in background running
parallel to the desktop and supports the AV protocol (very nice to
use this with Thing or Gemini).

Ciao...

5315. PGP AND PGPSHELL - HELP !

Newsgroup: comp.sys.atari.st
Date: 1995-06-29 00:00:00 UTC
From: kevan@empyr.dircon.co.uk
Message-ID: <06291995.224539@empyr.dircon.co.uk>
Source record: 163145

Hi,

I'm trying to use PGP26UIB (v2.6 Unofficial International), and Randy Hoekstra's 'PGP Shell' (v 0.9).

Has anyone used this before ? I can't seem to understand how to get it to produce an ascii public key for me, and how to sign this key myself.

I'm not altogether sure what a 'keyfile' is !

Do I need to change any of the default settings in the config.txt file ?

HELP !

Cheers,

Kev.

>essential, and can only hope that a new release is only so much better.

Actually, WINX 2.3beta is only available from Martin Osieka's home-bbs
"Maus OF2" in binary section WINX. However, it seems that it's on the
net already.

WINX 2.3 offers WindowShade, Backdrop, seperate (proportional) fonts
for window gadgets, configurable size of window gadgets...

Martin Osieka (author of WINX) has stopped developing WINX and started
programming MiNA (=MiNA is Not AES) which is a replacement mutlitasking
AES for MiNT. I.e. this will be something like MultiTOS' gem.sys but
hopefully faster. Of course, all features of WINX will be available in
MiNA as well.

Martin started programming earlier this year but due to his job he hasn't
got a lot of time for it.

Very Very simple, use THE DC FORMAT program to make your disk IBM compatible..

and you don't need to reformat them....

Mind you I have been told that IBM clones etc, don't like 10 sector or
twisted format disks....

DC FORMAT 3.3 sould be on most sites, its very very usefull in more ways than
one...!!!!!!

Yes and yes (to answer for azog). Just gotta love that file selector
in Windows. And I've yet to see anyone successfully multitask programs
better than even my ST on a Windows environment. I can run my mod player,
my compiler, a word processor, and do a tape drive back up at the same
time - without bombs!

>Have you ever used BOTH operating systems and in a position to even

Source record: 163015

Hello Selah,

1) If you use the FDI, you will have to have some sort of external device sending a clock signal; something like a DAT or CD player. Without external clock/sync the FDI won't be of much use to you, that is to say the Falcon syncs itself (some odd clock values...)

2) Yes, you can remove the bass boost on the audio output (or was it input??). Anyhow, contact the maus.sys.atari.hardware newsgroup. The folks there know *much*!!

3) errrr ???

After having the opportunity to toy with the English/PPC compatible version of the MagiCMac demo, I would like to congratulate you on a truly amazing product. I do have a few questions and concerns that I would like addressed before purchasing your product.

Firstly, I've had a lot of trouble with the serial port. I would really like to be able to run STalker which is my favortie ST program. I found that deselecting the checkbox for "Modem sets DCD properly" and "Drop DTR on Hangup" eliminated the crashes I was experiencing from trying to access the hardware directly but two issues still remain unresolved.

The first issue is the patch programs that come with your demo for the serial port cause no characters to be received. Typed characters are sent to the modem but I get nothing back in the terminal window. Without the patch, I get characters but flow control goes to hell. I don't think the port would work reliably above 2400 without the patches. The second issue I have is GDOS. Whenever I use a GDOS font with STalker, the terminal window fills with garbage instantly. I've tried Atari GDOS 1.x and G_Plus with the same result.

I've also noticed that in the Communication Port setting dialog a TT/MSTe serial port is detected but trying to switch to it will cause a crash. Can we expect serial port speeds of more than 19200 using MagiCMac. 38400 is really a MINIMUM requirement these days.

Secondly, I'd like to run some games. How can I get into ST-Low resolution and possibly boot from a floppy disk?

Thirdly, I really NEED Neodesk. So far I've had no success with running it in place of, or on top of Ease. Can that be done?

I also have a question on sound. Does it work? I haven't had a chance to try it beyond the normal beeps and keyclicks. Do mod players work? Does DMA sound stuff like an STe type thing happen?

I really would appreciate any info you can provide. If this isn't the right place to inquire, please re-direct me.

Thanks

Bill

|| Perhaps because THE ST IS DEAD. How many games have been released in the
|| last year for the ST? One? Maybe even as many as five!!
|
|First of all that isn't true. There were more than that (at least for
|the Falcon).
|
|| How about commercial products? How many? Maybe as many as 10!! The
|| ST is surely thriving...
|
|At least in Germany there you'll still find more than one or two
|companies that live on sales for Atari computers. There are still
|thousands of users who still spend money on software for their
|machines.

THE WHOLE WORLD DOES NOT LIVE IN GERMANY!

|
|| Personaly I dont think having the old games available from FTP sites would
|| hurt the ST. It would probably increase peoples interest for nostalgas sake.
|
|Bull.
|
|| I think the ST may have a year left in it maximum before it finaly bites the
|| dust... :(
|
|If ppl think as you do you're probably right. If not there will be
|a small ST user community whose members are still satisfied with the
|excellent software that exists for their machines.

|
||In article: <ab7_9506272100@miramax.yonet.org| Doug.Byfield writes:
||| And in some respects, it is exactly these ST huggers being too cheap
||| to upgrade to a Falcon that caused Atari to stop making computers.
||| The price never comes down if no one buys the product!
||
||Dont be a wanker!
|
| There's no need for that.
|
||The reasons people havent upgraded from an ST to a
||Falcon are as follows:
|| No software support
|| Small user base
|| No technical support
|| Dificult to buy over the counter (in the UK at least)
|| Difficult to find anywhere!
|| Overpriced for the base model
|
| I agree with your third point, but your other points are just
|consequences of other reasons why the Falcon did not sell.
|
||Peple just buy a PC. You can get far better and more professional
||software on a PC and get better support...
|
| You've just said people won't buy a Falcon because it's overpriced at
|500 quid, then said people will go out and buy a PC, which will cost them a
|lot more than 500 pounds. Your argument about software "professionality" is
I dont know about your side of the pond,but over here one can get
a decently equipped, mid-range 486 with multimedia for less than 1000. Might
not be able to include a decent monitor for under 1K tho.
486DX/2
2x CD
16bit sound
4Megs
500Meg HD... more or less...

and as far as other 'costs'. Well, I will admit that with no less
than 12 places in town that sell PC/Mac computer components
it is really easy to blow money on my system.
|certainly suspect, and not worth considering here.
```

| The reason people never bought Falcons was largely as Doug stated:
|"Atari doesn't advertise-we all know that."
|Bear in mind a large majority of computer purchasers in the 90's are
|computer illiterate. If the shop assistant recommends a model within
|their price range, they will probably buy it. As long as they, and the
|shop assistant remain ignorant of the existance of other machines, how
|can they be expected to choose that model?
| The price of the Falcon probably was a little too high to start with,
|but I don't think it was the price that put the average computer buyer
|off. It may have deterred games-playing ST owners....
It did. Most of the local ST gamerz went to low end clones.
How can you expect a consumer to buy a machine that is not
given the neccessary marketing. If Atari wont appears to
not care, why should us as consumers gamble our money?
PC's are dull tedious machines that I will still agree are
more work than fun (vs my ST that I still have fond memories
of may it rest in peace) but some practical considerations
need to be met.
|
||I've had a Jag for about two years, what a waste of money that was.
||That sort of broke my faith in Atari...
|
| ....like you from buying a Falcon.
|Whether the Jaguar is a waste of money or not is irrelevent to this
|argument. All the Falcon really needed was a marketing campaign. All it
|got was a couple of rave reviews in low circulation magazines.
|
| Paul

>ones on the market.

>If you want a new one your best bet is to ring Systems Solutions
>(01753-832212) who do one at £129.95 (without sound) or £149.95 (with
>sound). Ladbroke (01772-203116) do one at £99.99.

You may also like to consider the purchase of a svga colour monitor. If
you get one with the right spec you could use it in all three ST resolutions.

This has the advantage that if you upgade or change computing platforms the
monitor can still be used.
Systems Solutions sell a switch box which will let you do this. I use
an Eiso Flexscan monitor which works well on the ST and TT.

I recently upgraded my trusty Panasonic 1124 dot matrix to a laser
printer, the Brother HL630. None of the software I use, LDW,First word
plus, Printmaster or Stalker, prints correctly with the new printer.
I assume I need a printer driver for First Word Plus, does anypne know
if there is an FTP site for such drivers. On LDW the problem is that I
have
to print the second document before I get a copy of the first. There is
also a problem in that the second spreadsheet starts at the end of the
first. Any suggestions would be appreciated.

Check the program to see if it has an option to eject the page using Form Feed; otherwise, instead of printing a second page to eject the first, press the HL-630's SELECT button, then press FF/CONT. This will eject the page for you. Afterwards, simply press SELECT again to place the printer on-line for another page.

> There is also a problem in that the second spreadsheet starts at the end
> of the first. Any suggestions would be appreciated.

Either of the above will fix this problem for you.

To: progmon@eden.com

> Turtle Beach's Quad Studio 1.1 works really well syncing
> up to Atari Logic.

Yes, but that's the big problem with most PC systems - You'll have to sync different programs with each other, as the midi and audio parts often can't be handled by the same program. It gets pretty boring when one is about to make a lot of editing, just to find out that one has to jump between two programs all the time! Cubase Audio (together with Session 8 -expensive) and Cubasis Audio (with any sound card thay say -preferably Turtle Beach, since it has a better s/n ratio than most cards) are the only exceptions I know of.

> It gives you the tahiti
> card for your PC which has great audio specs and the Quad program
> which emulates a portastudio with full waveform editing. It syncs to

The cards from Turtle Beach are very good indeed, but I'd rather have yet another real synth or sampler, which is even better and more versatile.

> Logic via MTC with quad as the master and Logic as the slave.

Here we go again... Two computers, two monitors and very little place left, as well as a hell of a time switching position between the computers -not very ergonomic, I'm sure.

> everything the Logic Audio Mac people do with the advantage of having 2
> CPUs.

Mac is completely out of the question because of the horrible price one has to pay, but I think I'll stick to having the advantage of working with an Atari Falcon and Cubase Audio - both midi and audio integrated in the same program is much, much better.
By the way, Logic Audio for Falcon is a mess. I know several people who have really tried to make it work, but without success. It bombs every now and then and even though it says in the manuals that it should be able to play 8 tracks audio at the same time, it seems impossible to get more than 6 tracks, and it still bombs...
I'm sure that Logic Atari without the audio module works fine - I know people that have been using it for years, without problems, but Logic Audio for Falcon doesn't work at all (at least not good enough to work with professionally).
On the other hand, I can play up to 16 tracks audio at the same time with my Cubase Audio - why settle for something that's not as good as that?
Ok, ok, the 16 tracks are managed by compressing data - but it's a kind of compression that is hardly noticed in the sound quality. Cubase does play 8 audio tracks with no problems at all at full DAT qualtiy.
Cubase Audio doesn't bomb at all (anyway, mine hasn't in about 3 months, since

I got the 2.03 version -and I work with it almost every day).

Best regards,

Claes

Hi,

This is Merlin, you can order most of the recent games through us and we are able to get many more. If enough people are interested in a single game from yesteryear such as Chaos Engine we can get many copies but it is difficult to come by single copies.

If you like any further information, email us at Popemerlin@delphi.com and we will try to sort you out.

Phineas Pope

I'm in need of a 16Mhz ST machine, at least 1mb of RAM...
I do MIDI work on my current 520ST, but it is really too slow in screen redraws and things while working on sequences. I've heard rumors that my MIDI software will not work with a 16Mhz machine due to hardware timing problems... is there truth to this rumor? I'm using MasterTrax Pro.

Anyway - If you are selling a 16Mhz machine with at least 1mb of RAM for a reasonable price, please E-mail me at :

jeremy@icw.com,
or call (801)561-7223

5360. --Options for PPP on Atari?

Newsgroup: comp.sys.atari.st
Date: 1995-06-30 00:00:00 UTC
From: Personification of Insanity <chrishinds@delphi.com>
Message-ID: <BSw9Xyg.chrishinds@delphi.com>
Source record: 163040

Hello. I really want to get a PPP connection going on my Falcon, but it doesn't sound that easy. Here's my understanding of the choices:

1. KA9Q/NOS/OASIS - I imagine this is okay for Demon, but more difficult to use with other providers. This isn't helped by its daunting manual written for the PC version. Also, it supports dynamic addressing only with great difficulty, if at all.

2. MiNTnet, X11, etc. Since the TAF collection of files came out, this seems like a good choice. But from what I know, it only supports WWW, ftp, and telnet. What about news and mail? Are they that hard to implement?

3. Linux - I think this is an option, but haven't really investigated it much.

So, what have I left out?
I welcome any helpful info and corrections to any grievous errors I may have made.

Why sould Macs/PeeCees have it so damn easy?!?

Unfortunately, all I have is most of PureCode's IP address. (He's in my "friend's list" IRC script, but the IRC script only saves the domain name (or number), not the server name, so I don't have his full address. He works for Virgin, however, and pops into the IRC occasionlly. I have made a point of remembering to ask him for his E-Mail address next time I see him in the IRC.

5362. MiNT Distribution Kit on the Falcon

Newsgroup: comp.sys.atari.st
Date: 1995-06-30 00:00:00 UTC
From: glea0015@maroon.tc.umn.edu
Message-ID: <3t21ka$b56@epx.cis.umn.edu>
Source record: 163042

Okay, I'm kinda new here, so don't flame me if I'm talking about
things that have already been discussed.

Anyway. I'm rather confused. I have recently downloaded the
MiNT Distribution Kit and I'm having some problems.

After I unzooed everything and put it all on disks, I ran Setup
and proceeded to do the things in the instructions. Well, I'm on a
Falcon 030 with 4 megs of memory, and the version of MiNT that comes with
the Distribution Kit (v0.95) doesn't seem to like my computer... :P It
refuses to switch resolutions, past ST Low, and I can't set it up without
at least 80 columns. It tells me it's out of memory when I try to
change. I tried to switch to version 1.12, but that worked even worse.
It got a little past the auto-folder loadup and then crashed outright.

Please help. I'm going nuts here. You can reach me at
glea0015@maroon.tc.umn.edu
Thanks in advance. :)

The following items are for sale. I would like to sell them as one package. Notice the system does not have a monitor (it was sold separately). I live in the Philadelphia, PA area and because of the large amount of stuff I would prefer to sell it locally, otherwise you pay the shipping charges.

Books
ATARI ST Internals, ATARI ST Programming, Generic First CAD
Programmers Guide to GEM

Hardware
Atari 1040ST, 5-1/4" Floppy Drive, LogikHron Clock Card, Printer, Gemini-10x
Supra 20 MB HD, Parallel Cable, Serial Cable

Magazines
Various issues of Atari related magazines.
42 Start Magazine & Disks

Software
BASIC Gfa, C Compiler, CP/M, Dac Easy Accounting, Flash (Modem),
Flight Simulator, G+PLUS, HabaSolutions, HabaView, HabaWriter,
Hard Disk Accelator, Hardball, Harrier Strike Mission, Mean 18 & Courses,
Multi_Format, Rings of Zilfin, Sun Dog, Time Bandits, WERCS,
WordUp 2.0 3 disks, various public domain disks.

Best offer takes it all.

5370. 1995 AUTO ALMANAC CDROM FOR ATARI

Newsgroup: comp.sys.atari.st
Date: 1995-06-30 00:00:00 UTC
From: aa414@FreeNet.Carleton.CA
Message-ID: <DAyywo.5Fz@freenet.carleton.ca>
Source record: 163099

Homa Systems House is proud to announce a New product, the ATARI CD MASTER (ACM).
ACM is a an authoring system for a number of DOS/WINDOWS popular CD ROMS.
ACM has the following features:

- easy user interface, fully multitaksing in a window
- pictures are viewable on 2, 16 color, 256 color modes, including graphics cards and the Falcon
- Powerful search features, with "narrow down" option. On TIME almanac, you can search the whole CD for a particular key word(s)
- Upto 4 text windows open, with one picture window
- Save, print, ...

The following CDs are supported so far:
1- TIME ALMANAC OF THE 1990S, 2- TIME ALMANAC 1994 REFERENCE EDITION, 3- UFO I OR UFO II, 4- SPACE MISSIONS, 5- 1995 AUTO ALMANAC <NEW>. ALSO INCLUDED WITH THIS PACKAGE IS AUDIO CD MASTER V4, the ultimate Audio CD Player with more features that any conventional or computer CD audio player.

5- 1995 AUTO ALMANAC, This is an amazing CD, for someone who wants to buy a new car, or just a hobbyist. This CD has complete descriptions /specifications for over 350 different models of automobiles; from European, to American and Japanese, ... Each description comes with up to 5 images for each car. It also has TOP 10s on best/worst cars, most economical, best gas mileage, ... , on how to buy/lease a new car , even a glossary of terms, and more ... If you have a dream car, you would most likely find anything there is to know about it on this CD!

ATARI CD MASTER, complete 6 pack for only ..... 39.95 US$
Upgrade for Audio CD Master(v3) owners ..... 25.00 US$

At Homa Systems House, we are dedicated to bring you quality software and hardware. If you want to be on our mailing list, please send your name and address to one of the following:

Homa Systems House

>
>Dont be a wanker!

There's no need for that.

>The reasons people havent upgraded from an ST to a
>Falcon are as follows:
> No software support
> Small user base
> No technical support
> Dificult to buy over the counter (in the UK at least)
> Difficult to find anywhere!
> Overpriced for the base model

I agree with your third point, but your other points are just
consequences of other reasons why the Falcon did not sell.

>Peple just buy a PC. You can get far better and more professional
>software on a PC and get better support...

You've just said people won't buy a Falcon because it's overpriced at
500 quid, then said people will go out and buy a PC, which will cost them a
lot more than 500 pounds. Your argument about software "professionality" is
certainly suspect, and not worth considering here.
The reason people never bought Falcons was largely as Doug stated:
"Atari doesn't advertise-we all know that."
Bear in mind a large majority of computer purchasers in the 90's are
computer illiterate. If the shop assistant recommends a model within
their price range, they will probably buy it. As long as they, and the
shop assistant remain ignorant of the existance of other machines, how
can they be expected to choose that model?
The price of the Falcon probably was a little too high to start with,
but I don't think it was the price that put the average computer buyer
off. It may have deterred games-playing ST owners....

>I've had a Jag for about two years, what a waste of money that was.
>That sort of broke my faith in Atari...

....like you from buying a Falcon.
Whether the Jaguar is a waste of money or not is irrelevent to this

argument. All the Falcon really needed was a marketing campaign. All it got was a couple of rave reviews in low circulation magazines.

Paul
